It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, age or handicap. The University is committed to the maintenance of affirmative action programs which will assure the continuation of such equality of opportunity.

ABSTRACT

This report is a summary of 1992 farm business data collected from 22 fruit farm businesses located in Western New York State. Apples are the predominant fruit crop. The data are presented as averages for all 22 farms. The business analysis includes a balance sheet, income statement, cash flow statement, and several financial and production analyses for the farms. Also included are blank columns for the user to enter his or her own farm data for comparison purposes.

ACKNOWLEDGEMENTS

The authors are Gerald B. White, Professor; Alison M. DeMarree, Regional Fruit Specialist; and Linda D. Putnam, Research Support Specialist. Appreciation is expressed to the cooperating fruit farmers who provided the data summarized in this report.

1992 LAKE ONTARIO FRUIT FARM BUSINESS SUMMARY

INTRODUCTION

Western New York fruit farmers, whose major crop is apples, are invited to participate in Cornell Cooperative Extension's fruit farm business summary program each year. Each participating farmer receives a comprehensive business summary and analysis of his or her farm business. This report presents averages for the data submitted by participating farmers for 1992.

The primary objective of the fruit farm business summary (FFBS) program is to help farm managers improve the financial management of their business through appropriate use of historical farm data and the application of modern farm business analysis techniques. The FFBS identifies the business and financial information farmers need and provides a framework for use in identifying and evaluating the strengths and weaknesses of the farm business.

A computer program is used to process the data collected from fruit farmers. This program enables an analysis to be produced on the farm as soon as the farmers' data are entered. This provides rapid processing of the information for timely use in the management of the farm business.

The farms in this study are primarily apple farms. An average of 81 percent of the receipts in 1992 was from the sale of apples. The data were not obtained from a random sample of all fruit farms in Western New York. Therefore, the analysis should not be used to represent the Western New York fruit industry.

Format Features

This report provides a set of tables which comprise a comprehensive analysis of the participating fruit farms. Worksheets are included to give fruit farmers an opportunity to summarize their business. The analysis tables have a blank column or section labeled "My Farm". It may be used to compare an individual farm business with the average performance of the 22 farms.

This report features:

- 1) A complete Balance Sheet and analysis including financial ratios.
- 2) An Income Statement including accrual accounting adjustments for farm business expenses and receipts, as well as measures of profitability with and without appreciation.
- 3) Forms for a Cash Flow Statement and Repayment Analysis Worksheets.
- 4) Analyses of Capital Efficiency, Equipment, and Labor.
- 5) A Cropping Program Analysis with Cost Control Factors.
- 6) A Three Year Comparison of selected business factors.

Apple Production and Prices in Recent Years

Apple production for the State was 27.9 million bushels in 1992. Western New York growers produced 18.1 million bushels or about 65 percent of the total State crop. Statewide, production was up 11 percent and in Western New York it was up about six percent compared to 1991.

Twenty-eight percent of the 1992 apple crop produced in Western New York was sold fresh. This was up from 25 percent of the crop for 1991. The 1992 fresh crop was 5.0 million bushels - up 16 percent from 1991. Processing apple production in Western New York increased two percent from 1991 to 13.1 million bushels for 1992. Seventy-two percent of the Western New York crop was processing apples.

Net Freight-On-Board (F.O.B.) prices received per bushel for fresh apples in Western New York averaged \$6.68 per bushel, 22 percent lower than in 1991. The bulk price for fresh apples was \$4.70 per bushel. Western New York processing apple prices averaged \$2.79 per bushel or 6.6 cents per pound in 1992, 15 percent below 1991.

Statewide, fresh apple prices received by growers averaged \$5.96 per bushel net F.O.B., \$2.48 per bushel lower than the average 1991 price. Processing apples, produced mostly in Western counties, averaged \$2.70 per bushel or 6.5¢ per pound for 1992.

SUMMARY AND ANALYSIS OF THE FARM BUSINESS

Business Characteristics

Finding the right management strategies is an important part of operating a successful farm business. Various combinations of farm resources, enterprises, business arrangements, and management techniques are used by the fruit farmers in Western New York. The following table shows important farm business characteristics and the number of farmers reporting these characteristics.

Table 2. Business Characteristics, 22 Western New York Fruit Farms, 1992

<u>Type of Business</u>	<u>Number</u>	<u>Business Record System</u>	<u>Number</u>

		Other	0

<u>Business Composition</u>	<u>Number</u>
Fruit production only	8
Fruit with storage	3
Fruit & other enterprises	5
Fruit with storage & other enterprises	6

Farm Financial Status

The first step in evaluating the financial status of the farm business is to construct a balance sheet which identifies all the assets and liabilities of the business. The second step is to evaluate the relationships between assets, liabilities, and net worth at the end of the year and the changes that occurred during the year.

Financial lease obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments by signing the lease. The present value is also listed as an asset, representing the future value the item has to the business.

Table 3 presents the balance sheet data for the 22 fruit farm cooperators. It lists the average value of assets and liabilities for December 31, 1991 and December 31, 1992 and, therefore, shows the changes that occurred for each category during the year. Asset values that are estimated each year should reflect changes in quantity or quality of the asset and conservative adjustments for price changes. Careful attention to asset values is important for a meaningful calculation of change in net worth, a measure of financial progress.

Table 4 provides a format for the reader to use to develop a balance sheet for an individual farm business.

The balance sheet analysis involves an examination of financial and debt ratios. Percent equity is calculated by dividing end of year net worth by end of year assets. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect strength in solvency and the potential capacity to borrow. Debt levels per unit of production include some old standards that are still useful if used with measures of cash flow and repayment ability. The change in farm net worth without appreciation is an excellent indicator of financial progress from operating the business.

The farm inventory balance is an accounting of the value of assets used on the balance sheet and the changes that occur from the beginning to end of year. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

²Real estate appreciation excludes \$0 of appreciation on assets sold during the year.

Income Statement

On the following pages the accrual adjusted income statement begins with an accounting of all farm business expenses.

Cash Paid is the actual amount of money paid out during the year and does not necessarily represent the cost of goods and services actually used.

Change in Inventory: An increase in inventory is subtracted in computing accrual expenses; it represents inputs that were purchased but not actually used during the year. A decrease in inventory is added to expenses because it represents the cost of inputs purchased in a prior year and used this year.

Changes in Prepaid Expenses apply to non-inventory categories. Included are expenses that have been paid in advance of their use, for example, next year's rent paid this year. An increase in a prepaid expense is an amount paid this year that is an expense for a future year and, thus, is subtracted from expenses; a decrease in a prepaid expense indicates an amount paid in a prior year that is an expense for this year and added to cash expenses.

Change in Accounts Payable: An increase in payables is an expense chargeable to this year but not paid by the end of the year. A decrease in payables is an expense for a previous year that was paid this year.

Accrual Expenses are the costs of inputs actually used for this year's production.

The worksheet on page 9 is provided to enable any fruit farmer to compare his or her expenses with the group averages in the corresponding table.

TOTAL OPERATING RECEIPTS	\$526,718	\$(22,517)	\$(4,680)	\$499,521

¹Change in crop and livestock products inventory.

²Change in advanced government receipts.

³Gifts and inheritances of livestock and crops to the farm business.

Cash Receipts include the amount received during the year from the sale of farm products and services, and government programs.

Changes in Inventory are calculated by subtracting beginning of year values from end of year values excluding appreciation. Changes in crop and livestock inventories are calculated. Changes in advanced government receipts are calculated by subtracting the end of year balance from the beginning year balance.

Changes in Accounts Receivable are calculated by subtracting beginning year balances from end year balances.

Accrual Receipts represent the value of all farm commodities and services generated by the farm business during the year.

Profitability Analysis

Farm owner-operators contribute labor, management, and capital to their businesses and the best combination of these resources maximizes profits. Farm profitability can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

Net Farm Income is the total combined return to the farm operators and other unpaid family members for their labor, management, and equity capital. It is the farm family's annual net return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is measured later in this report.

Net farm income is computed both with and without appreciation. Appreciation represents the change in values caused by annual changes in prices of livestock, equipment, real estate inventory, and stocks and certificates (other than Farm credit). Appreciation is a major factor contributing to changes in farm net worth and must be included for a complete profitability analysis.

Table 11. Net Farm Income, 22 Western New York Fruit Farms, 1992

Item	24 Farms 1991	My Farm
Total accrual receipts	\$499,521	\$ _____
+ Appreciation:		
Livestock	(489)	_____
Equipment	425	_____
Real estate	2,958	_____
Other - Stocks & certificates	<u>+1,644</u>	+ _____
= Total accrual receipts with appreciation	\$505,037	\$ _____
- Total accrual expenses	<u>-486,903</u>	- _____
= Net farm income with appreciation	\$18,134	\$ _____
Net farm income without appreciation	\$12,618	\$ _____

Return to Operators' Labor, Management, and Equity Capital measures the total business profits for the farm operator(s). It is calculated by deducting a charge for unpaid family labor from net farm income. Operators' labor is not included in unpaid family labor. Return to operators' labor, management, and equity capital has been calculated both with and without appreciation. Appreciation is considered an important part of the return to ownership of farm assets.

Table 12. Return to Operators' Labor, Management, and Equity Capital
22 Western New York Fruit Farms, 1992

Item	22 Farms 1992	My Farm
With appreciation:		
Net farm income	\$18,134	\$ _____
- Family unpaid labor @ \$1,350 per month	<u>-245</u>	- _____
= Return to operators' labor, management, & equity	\$17,889	\$ _____
Without appreciation:		
Net farm income	\$12,618	\$ _____
- Family unpaid labor @ \$1,350 per month	<u>-245</u>	- _____
= Return to operators' labor, management, & equity	\$12,373	\$ _____

Labor and Management Income is the return which farm operators receive for their labor and management used in operating the farm business. Appreciation is not included as part of the return to labor and management because it results from ownership of assets rather than management of the farm business. Labor and management income is calculated by deducting the opportunity cost of using equity capital, at a real interest rate of five percent, from the return to operators' labor, management, and equity capital excluding appreciation. The interest charge of five percent reflects the long-term average rate of return above inflation that a farmer might expect to earn in an investment of comparable risk.

Table 13. Labor & Management Income, 22 Western New York Fruit Farms, 1992

Item	22 Farms 1992	My Farm
Without appreciation:		
Return to operators' labor, management, & equity	\$12,373	\$ _____

= Labor & management income per farm	\$(22,559)	\$ _____
Labor & management income per operator	\$(12,400)	\$ _____

Return on Equity Capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operators' labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital.

Cash Flow Statement

Completing an annual cash flow statement is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The **Annual Cash Flow Statement** is structured to compare all the cash inflows with all the cash outflows for the year. A complete list of cash inflows and cash outflows is included in Table 15. By definition, total cash inflows must equal total cash outflows when beginning and end balances are included. Any imbalance is, therefore, the error from incorrect accounting of cash inflows and cash outflows.

Table 15. Annual Cash Flow Statement, 22 Western New York Fruit Farms, 1992

Item	22 Farms 1992	My Farm
<u>Cash Inflows</u>		
Beginning farm cash, checking, & savings	\$ 21,973	\$ _____

Interest paid	14,906	_____
Personal withdrawals & family expenditures including non-farm debt payments & crop operator labor costs	71,788	_____
Ending farm cash, checking & savings	<u>14,934</u>	_____
Total Cash Outflows	\$624,511	\$ _____
Imbalance (error)	\$1,731	\$ _____

Repayment Analysis

The second step in cash flow analysis is to compare the debt payments planned for this year with the amount actually paid. The measures listed below provide a number of different perspectives on the repayment performance of the business.

Table 16. Farm Debt Payments Planned, 22 Western New York Fruit Farms, 1992

Debt Payments	22 Fruit Farms			My Farm		
	Planned for 1992 ¹	Actual Payments in 1992 ²	Planned for 1993	Planned for 1992	Actual payments 1992	Planned for 1993
Accts. payable (net reduction)	\$ 1,864	\$ 0	\$ 727	_____	\$ _____	\$ _____
Operating (net reduction)	8,204	0	9,090	_____	_____	_____

Payments per acre of:						
bearing fruit	\$153	\$146		\$ _____	\$ _____	
all fruit	\$138	\$132		\$ _____	\$ _____	
Payments/bushel of apples sold	\$0.29	\$0.28		\$ _____	\$ _____	

¹If on the Fruit Farm Business Summary the previous year.

²Actual payments excluding refinanced debt.

The **Cash Flow Coverage Ratio** measures the ability of the farm business to meet its planned debt payment schedule. The ratio shows the percentage of planned payments that could have been made with this year's available cash flow. However, the critical question to many farmers and lenders is whether planned payments can be made in 1993. The worksheet provided in Table 18 can be used to estimate repayment ability which can then be compared to planned 1993 debt payments shown in Table 16.

Table 17. Cash Flow Coverage Ratio, 22 Western New York Fruit Farms, 1992

Item	22 Farms 1992	My Farm
Cash farm receipts	\$527,471	\$ _____
- Cash farm expenses	439,406	_____

Capital Efficiency Analysis

Capital efficiency factors measure how intensively capital is being used in the farm business. As capital needs grow, capital management becomes more important.

Capital turnover is a measure of capital efficiency as it shows the number of years of farm receipts required to equal or "turnover" the capital investment. It is computed by dividing the average farm asset value by the year's total farm accrual receipts and appreciation.

Table 19. Capital Efficiency Analysis, 22 Western New York Fruit Farms, 1992

Item	Average Capital Investment			
	Per worker equivalent	Per Bearing Acre:		Per all fruit acres
		Owned	Operated	
Assets				
Total farm capital	\$86,962	\$6,205	4,180	\$3,768
Real estate	37,182	2,653	n/a	1,611
All equipment	8,670	n/a	417	376
Capital turnover, years	1.93			
My Farm:				
Total farm capital	\$ _____	\$ _____	\$ _____	\$ _____
Real estate	_____	_____	_____	_____
All equipment	_____	_____	_____	_____
Capital turnover, years	_____			

Equipment Analysis

Equipment costs comprise nearly 20 percent of the cost of fruit production. Total equipment expenses include the major fixed costs (interest and depreciation) as well as the accrual operating costs.

Table 20. Accrual Equipment Expenses, 22 Western New York Fruit Farms, 1992

Item	Average 22 Fruit Farms			My Farm		
	Total equip. cost	Equipment cost per fruit acre operated:		Total equip. cost	Equipment cost per fruit acre operated:	
		Bearing	All fruit		Bearing	All fruit

Total Equipment Cost	\$85,737	\$368	\$332	\$ _____	\$ _____	\$ _____

Labor Analysis

The efficient use of labor is closely related to farm profitability. Measures of labor efficiency or productivity are key indicators of management's success.

Table 21. Labor Force Inventory and Analysis, 22 Western New York Fruit Farms, 1992

Labor Force	Full-time months	Age, years	Years of Education	Value of labor/mgmt.
Average:				
Operator -				
number 1	11.0	45	15	\$28,934
number 2	5.9	41	13	15,064

Total labor & equip. cost	\$316,755	\$28,269	\$1,359	\$ _____	\$ _____	\$ _____

Cropping Program Analysis

The cropping program is the central part of a fruit farm business. A complete evaluation of available land resources, how they are being used, how well crops are producing, and what it costs to produce them, is required to evaluate alternative cropping choices. In the table below, average crop acres and yields are presented for the number of farms reporting each crop.

Table 22. Land Resources and Crop Production, 22 Western New York Fruit Farms, 1992

Item	Average 22 Farms			My Farm		
	Owned	Rented	Total	Owned	Rented	Total
Land Class (end of year)						
Bearing fruit, acres	157.0	76.1	233.1	_____	_____	_____
Non-bearing fruit, acres	18.6	6.8	25.5	_____	_____	_____
Other crops, open, acres	25.9	5.7	31.7	_____	_____	_____
Non-tillable pasture, acres	7.4	0.5	7.9	_____	_____	_____
Other non-tillable, acres	35.7	11.0	46.7	_____	_____	_____

Other	16	43.5		_____	_____	

Cost Control Factors

The control of costs is an important factor in the success of modern commercial fruit farm businesses. But before they can be controlled, they must be known. A major reason for farm business analysis is to identify the most significant cost items so cost control decisions can be encouraged as warranted. However, the optimum level of input items used to obtain the greatest net return is difficult to determine.

Farm managers have substituted power and equipment for labor to a large degree. With labor and equipment costs in excess of 50 percent of total production costs on fruit farms, it is important to know and control these and other costs on a production unit basis.

Table 23. Cost Control Factors, 22 Western New York Fruit Farms, 1992

Item	Cost Per Fruit Acre Operated	
	Bearing acres	All fruit acres
All labor - including operators' labor	\$991	\$893
Picking labor	449	405
Other hired labor	414	373
All equipment cost	368	332
Spray	287	259

PROGRESS OF THE FARM BUSINESS

Comparing your business with average data from other fruit farms can be a helpful part of a business checkup. While a wide variation in business size and composition exists in this group of fruit farms, many of the factors will provide a meaningful indication of how you compare with other fruit farms. It is, perhaps, even more important for you to determine the progress your business has made over the past two or three years and to set goals for the future.

The tables on the following pages provide the opportunity for you to compare your business factors with averages for the participating farms for the past three years. It also encourages you to set some goals toward which to strive as you measure the progress of your farm business over the years.

Table 24. Progress of the Fruit Farm Business, Western New York Fruit Farms, 1990-1992

Selected Factors	1990	1991	1992
Number of farms	22	24	22
