1994 DAIRY FARM BUSINESS SUMMARY NORTHERN HUDSON REGION*

INTRODUCTION

Dairy farmers throughout New York State have been participating in Cornell Cooperative Extension's farm business summary and analysis program since the early 1950's. Managers of each participating farm business receive a comprehensive summary and analysis of the farm business. The information in this report represents an average of the data submitted from dairy farms in the Northern Hudson Region for 1994.

Program Objective

The primary objective of the dairy farm business summary, DFBS, is to help farm managers improve the business and financial management of their business through appropriate use of historical farm data and the application of modern farm business analysis techniques. This information can also be used to establish goals that will enable the business to better meet its objectives. In short, DFBS identifies business and financial information needed in identifying and evaluating strengths and weaknesses of the farm business.

Format Features

This regional report follows the same general format as in the 1994 DFBS printout received by all participating dairy farmers. The analysis tables have an open column or section labeled My Farm. It may be used by any dairy farm manager who wants to compare his or her business with the average data of this region. A DFBS Data Check-in Form can be used by non-DFBS participants to summarize their businesses.

This report features:

- (1) an income statement including accrual adjustments for farm business expenses and receipts, as well as measures of profitability with and without appreciation,
- (2) a complete balance sheet with analytical ratios;
- (3) a statement of owner equity which shows the sources of the change in owner equity during the year;
- (4) a cash flow statement and debt repayment ability analysis;
- (5) an analysis of crop acreage, yields, and expenses;
- (6) an analysis of dairy livestock numbers, production, and expenses; and
- (7) a capital and labor efficiency analysis.

*The Northern Hudson Region of New York State, with the number of participating farms in parentheses, is comprised of Albany (5), Saratoga (14), Schenectady (3), Rensselaer (22), Washington (16), and Greene (1) counties. This report was written by Stuart F. Smith, Senior Extension Associate, Farm Management. Linda D. Putnam was in charge of data preparation. Judy Neno and Beverly Carcelli prepared the publication. Farm business data were collected by Cooperative Extension Agents Cathy Wickswat, David Wood, and Anita Deming.

SUMMARY AND ANALYSIS OF THE FARM BUSINESS

Business Characteristics

Planning the optimal management strategies is a crucial component of operating a successful farm. Various combinations of farm resources, enterprises, business arrangements, and management techniques are used by the dairy farmers in this region. The following table shows important farm business characteristics and the number of farms with each characteristic.

BUSINESS CHARACTERISTICS

61 Northern Hudson Region Dairy Farms, 1994

| <u>Type of Farm</u> | <u>Number</u> | <u>Milking System</u> | <u>Number</u> |
|---------------------------|---------------|-------------------------------|---------------|
| Dairy | 59 | Bucket & carry | 0 |
| Part-time dairy | 0 | Dumping station | 0 |
| Dairy cash-crop | 2 | Pipeline | 23 |
| Part-time cash-crop dairy | 0 | Herringbone parlor | 34 |
| | | Other parlor | 4 |
| <u>Type of Ownership</u> | <u>Number</u> | <u>Production Records</u> | <u>Number</u> |
| Owner | 55 | DHIC | 50 |
| Renter | 6 | Owner-Sampler | 2 |
| | | Other | 4 |
| <u>Type of Business</u> | <u>Number</u> | None | 5 |
| Single Proprietorship | 32 | <u>bST Usage</u> | <u>Number</u> |
| Partnership | 22 | Used on <25% of herd | 8 |
| Corporation | 7 | Used on 25-75% of herd | 27 |
| <u>Type of Barn</u> | <u>Number</u> | Used on >75% of herd | 0 |
| Stanchion/Tie-Stall | 21 | Stopped using in 1994 | 2 |
| Freestall | 37 | Not used in 1994 | 24 |
| Combination | 3 | <u>Business Record System</u> | <u>Number</u> |
| <u>Milking Frequency</u> | <u>Number</u> | Account Book | 11 |
| 2x/day | 47 | Agrifax (mail-in only) | 13 |
| 3x/day | 13 | On-farm computer | 17 |
| Other | 1 | Other | 20 |

The averages used in this report were compiled using data from all the participating dairy farms in this region unless noted otherwise. There are full-time dairy farms, part-time farms, dairy cash-crop farms, farm renters, partnerships, and corporations included in the average. Average data for these specific types of farms are presented in the State Business Summary.

Income Statement

In order for an income statement to accurately measure farm income, it must include cash transactions and accrual adjustments (changes in accounts payable, accounts receivable, inventories, and prepaid expenses).

Cash paid is the actual cash outlay during the year and does not necessarily represent the cost of goods and services actually used in 1994.

Change in inventory: Increases in inventories of supplies and other purchased inputs are subtracted in computing accrual expenses because they represent purchased inputs not actually used during the year. Decreases in purchased inventories are added to expenses because they represent inputs purchased in a prior year and used this year.

CASH AND ACCRUAL FARM EXPENSES

61 Northern Hudson Region Dairy Farms, 1994

| Expense Item | Cash Paid + | Change in Inventory or Prepaid Expense + | Change in Accounts Payable = | Accrual Expenses |
|--------------------------|----------------|---|------------------------------------|---------------------|
| <u>Hired Labor</u> | \$44,538 | \$-149 << | \$14 | \$44,403 |
| <u>Feed</u> | | | | |
| Dairy grain & conc. | 100,672 | 439 | -1,583 | 99,528 |

| Replacement livestock | 5,131 | 0 << | -184 | 4,947 |
| Breeding | 5,573 | -42 | -1 | 5,530 |
| Vet & medicine | 11,705 | 222 | 46 | 11,973 |
| Milk marketing | 29,763 | 0 << | -27 | 29,736 |
| Cattle lease/rent | 263 | 0 << | 0 | 263 |
| Other livestock expense | 21,885 | 84 | -521 | 21,448 |
| <u>Crops</u> | | | | |
| Fertilizer & lime | 12,929 | -459 | 581 | 13,051 |
| Seeds & plants | 5,783 | 246 | 55 | 6,084 |
| Spray, other crop exp. | 5,875 | 15 | 90 | 5,980 |
| <u>Real Estate</u> | | | | |
| Land/bldg./fence repair | 4,755 | 17 | -3 | 4,769 |
| Taxes | 9,040 | 0 << | 194 | 9,234 |
| Rent & lease | 8,345 | -5 << | 58 | 8,398 |
| <u>Other</u> | | | | |
| Insurance | 5,167 | -0 << | 0 | 5,167 |
| Telephone (farm share) | 997 | 3 << | -2 | 998 |
| Electricity (farm share) | 10,541 | -1 << | 25 | 10,565 |
| Interest paid | 18,934 | 0 << | 149 | 19,083 |
| Miscellaneous | <u>5,118</u> | <u>1</u> | <u>191</u> | <u>5,310</u> |
| Total Operating | \$346,405 | \$557 | \$-322 | \$346,640 |
| Expansion livestock | 5,644 | 0 << | 0 | 5,644 |
| Machinery depreciation | | | | 16,420 |
| Building depreciation | | | | 8,574 |
| TOTAL ACCRUAL EXPENSES | | | | <u>\$377,278</u> |

Change in prepaid expenses (noted above by <<) is a net change in non-inventory expenses that have been paid in advance of their use. If 1994 funds used to prepay 1995 leases exceed the amount of 1994 leases prepaid in 1993, the amount of this excess is entered as a negative number to exclude it from 1994 accrual lease expenses. The excess prepaid lease is charged against the future year's business operation. A decrease in prepaid lease is added to accrual expenses because it represents use of resources during this year that were paid for in past years.

Change in accounts payable: An increase in accounts payable from beginning to end of year is added when calculating accrual expenses because these expenses were incurred (resources used) in 1994 but not paid for. A decrease is subtracted because the resource was used before 1994.

Accrual expenses are the costs of inputs actually used in this year's production. They are the total of cash paid, as well as changes in inventory, prepaid expenses, and accounts payable.

CASH AND ACCRUAL FARM RECEIPTS
61 Northern Hudson Region Dairy Farms, 1994

| Receipt Item | Cash Receipts + | Change in Inventory + | Change in Accounts Receivable = | Accrual Receipts |
|-----------------------------|--------------------|--------------------------|---------------------------------------|---------------------|
| Milk sales | \$364,116 | | \$2,574 | \$366,690 |
| Dairy cattle | 18,674 | \$11,159 | 164 | 29,997 |
| Dairy calves | 4,730 | | 11 | 4,741 |
| Other livestock | 505 | 7 | 0 | 512 |
| Crops | 5,250 | 7,210 | -219 | 12,241 |
| Government receipts | 6,953 | 38* | 180 | 7,171 |
| Custom machine work | 713 | | 0 | 713 |
| Gas tax refund | 318 | | 0 | 318 |
| Other | <u>2,686</u> | | <u>0</u> | 2,686 |
| Less nonfarm noncash cap.** | (-) | <u>0</u> | (-) | <u>0</u> |
| Total Receipts | \$403,945 | \$18,414 | \$2,710 | \$425,069 |

*Change in advanced government receipts.

**Gifts or inheritances of cattle or crops included in inventory.

Cash receipts include the gross value of milk checks received during the year plus all other payments received from the sale of farm products, services, and government programs. Nonfarm income is not included in calculating farm profitability.

Changes in inventory of assets produced by the business are calculated by subtracting beginning of year values from end of year values excluding appreciation. Increases in livestock inventory caused by herd growth and/or quality are added, and decreases caused by herd reduction and/or quality are subtracted. Changes in inventories of crops grown are also included. An annual increase in advanced government receipts is subtracted from cash income because it represents income received in 1994 for the 1995 crop year in excess of funds earned for 1994. Likewise, a decrease is added to cash government receipts because it represents funds earned for 1994 but received in 1993.

Changes in accounts receivable are calculated by subtracting beginning year balances from end year balances. The January milk check for this December's marketings compared with the previous January's check is included as a change in accounts receivable.

Accrual receipts represent the value of all farm commodities produced and services actually generated by the farm business during the year.

Profitability Analysis

Farm operators* contribute labor, management, and equity capital to their businesses and the combination of these resources, and the other resources used in the business, determines profitability. Farm profitability can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

*Operators are the individuals who are integrally involved in the operation and management of the farm business. They are not limited to those who are the owner of a sole proprietorship or are formally a member of the partnership or corporation.

Net farm income is the return to the farm operators and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed both with and without appreciation. Appreciation represents the change in values caused by annual changes in prices of livestock, machinery, real estate inventory, and stocks and certificates (other than Farm Credit). Appreciation is a major factor contributing to changes in farm net worth and must be included for a complete profitability analysis.

NET FARM INCOME

61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | | My Farm | |
|-------------------------------------|-----------------|---------|---------|---------|
| | Total | Per Cow | Total | Per Cow |
| Total accrual receipts | \$425,069 | | \$_____ | |
| Appreciation: Livestock | -5 | | _____ | |
| Machinery | 539 | | _____ | |
| Real Estate | 4,733 | | _____ | |
| Other Stock/Certificates | <u>291</u> | | _____ | |
| Total Including Appreciation | \$430,627 | | \$_____ | |
| Total accrual expenses | <u>-377,278</u> | | -_____ | |
| Net Farm Income (with appreciation) | \$53,349 | \$411 | \$_____ | \$_____ |
| Net Farm Income (w/o appreciation) | \$47,791 | \$368 | \$_____ | \$_____ |

The chart below shows the relationship between net farm income per cow (with appreciation) and pounds of milk sold per cow. Generally, farms with a higher production per cow have higher profitability per cow.

Return to operators' labor, management, and equity capital measures the total net farm income for the farm operator(s). It is calculated by deducting a charge for unpaid family labor from net farm income. Operators' labor is not included in unpaid family labor. Return to operators' labor, management, and equity capital has been calculated both with and without appreciation. Appreciation is an important part of the return to ownership of farm assets.

RETURN TO OPERATORS' LABOR, MANAGEMENT, AND EQUITY
61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | | My Farm | |
|---|-----------------|--------------------|-----------------|--------------------|
| | With Apprec. | Without Apprec. | With Apprec. | Without Apprec. |
| Net farm income | \$53,349 | \$47,791 | \$ _____ | \$ _____ |
| Family labor unpaid @ \$1,450 per month | <u>-5,017</u> | <u>-5,017</u> | - _____ | - _____ |
| Return to operators' labor, management, & equity | \$48,332 | \$42,774 | \$ _____ | \$ _____ |

Labor and management income is the return which farm operators receive for their labor and management used in operating the farm business. Appreciation is not included as part of the return to labor and management because it results from ownership of assets rather than management of the farm business. Labor and management income is calculated by deducting the opportunity cost of using equity capital, at a real interest rate of five percent, from the return to operators' labor, management, and equity capital excluding appreciation. The interest charge of five percent reflects the long-term average rate of return above inflation that a farmer might expect to earn in comparable risk investments.

LABOR AND MANAGEMENT INCOME
61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | My Farm |
|--|----------------|----------|
| Return to operators' labor, management, & equity without appreciation | \$42,774 | \$ _____ |
| Real interest @ 5% on \$693,644 average equity capital | <u>-34,682</u> | - _____ |
| Labor & Management Income | \$8,092 | \$ _____ |
| Labor & Management Income per 1.54 Operator/Manager | \$5,255 | \$ _____ |

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital. Return on total capital is calculated by adding interest paid to the return on equity capital and then dividing by average farm assets to calculate the rate of return on total capital.

RETURN ON EQUITY CAPITAL AND RETURN ON TOTAL CAPITAL
61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | My Farm |
|---|----------|----------|
| Return to operators' labor, management, & equity capital with appreciation | \$48,332 | \$ _____ |
| Value of operators' labor & management | - 31,501 | - _____ |
| Return on equity capital with appreciation | \$16,831 | \$ _____ |
| Interest paid | + 19,083 | + _____ |
| Return on total capital with appreciation | \$35,914 | \$ _____ |
| Return on equity capital without appreciation | \$11,273 | \$ _____ |
| Return on total capital without appreciation | \$30,356 | \$ _____ |
| Rate of return on average equity capital: | | |
| with appreciation | 2.43% | _____ % |
| without appreciation | 1.63% | _____ % |
| Rate of return on average total capital: | | |
| with appreciation | 3.71% | _____ % |
| without appreciation | 3.13% | _____ % |

Farm and Family Financial Status

The first step in evaluating the financial position of the farm is to construct a balance sheet which identifies all the assets and liabilities of the business. The second step is to evaluate the relationship between assets, liabilities, and net worth and changes that occurred during the year.

Financial lease obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments by signing the lease. The present value is also listed as an asset, representing the future value the item has to the business. For 1994, lease payments were discounted by 8.25 percent to obtain their present value.

Advanced government receipts are included as current liabilities. Government payments received in 1994 that are for participation in the 1995 program are the end year balance and payments received in 1993 for participation in the 1994 program are the beginning year balance.

Current Portion or principal due in the next year for intermediate and long term debt is included as a current liability.

1994 FARM BUSINESS & NONFARM BALANCE SHEET

| TOTAL FARM & NONFARM NET WORTH | \$755,372 | \$783,428 |

*Assumes that average nonfarm assets and liabilities for the nonreporting farms were the same as for those reporting.

The following condensed balance sheet, including deferred taxes, contains average data from only those farmers who elected to provide the additional information required to compute deferred taxes.

Deferred taxes represent an estimate of the taxes that would be paid if the farm were sold at year end fair market values and date on the balance sheet. Accuracy is dependent on the accuracy of the market values and the tax basis data provided. Any tax liability for assets other than livestock, machinery, land, buildings and nonfarm assets is excluded. It is assumed that all gain on purchased livestock and machinery is ordinary gain and that listed market values are net of selling costs. The effects of investment tax credit carryover and recapture, carryover of operating losses, alternative minimum taxes and other than average exemptions and deductions are excluded because they have only minor influence on the taxes of most farms. However, they could be important.

CONDENSED BALANCE SHEET INCLUDING DEFERRED TAXES
December 31, 1994
12 New York Dairy Farms, 1994

| ASSETS | | LIABILITIES & NET WORTH | |
|--------------------------|------------------|-------------------------------|------------------|
| | | Current debts & payables | \$80,678 |
| | | Current deferred taxes | 28,791 |
| Total Current Assets | \$106,867 | Total Current Liabilities | \$109,469 |
| | | Intermediate debts & leases | \$131,814 |
| | | Intermediate deferred taxes | 103,642 |
| Total Inter. Assets | \$396,178 | Total Inter. Liabilities | \$235,456 |
| | | Long term debts & leases | \$147,974 |
| | | Long term deferred taxes | 79,196 |
| Total Long Term Assets | \$438,030 | Total Long Term Liab. | \$227,170 |
| TOTAL FARM ASSETS | \$941,075 | TOTAL FARM LIABILITIES | \$572,095 |
| | | Farm Net Worth | \$368,981 |
| | | Percent Equity (Farm) | 39% |
| <hr/> | | | |
| | | Nonfarm debts | \$700 |
| | | Nonfarm deferred taxes | 8,881 |
| Total Nonfarm Assets | \$38,089 | Total Nonfarm Liabilities | \$9,581 |
| <hr/> | | | |
| TOTAL ASSETS | \$979,164 | TOTAL LIABILITIES | \$581,675 |
| | | Total Net Worth | \$397,489 |
| | | Percent Equity (Total) | 41% |

Balance sheet analysis involves examination of relative asset and debt levels for the business. Percent equity is calculated by dividing end of year net worth by end of year assets and multiplying by 100. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect business solvency and the potential capacity to borrow. Debt levels per productive unit represent old standards that are still useful if used with measures of cash flow and repayment ability.

BALANCE SHEET ANALYSIS

61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | My Farm | | |

| Farm Debt Levels: | | | | |
| | Per Cow | Per Tillable Acre Owned | Per Cow | Per Tillable Acre Owned |
| Total farm debt | \$2,084 | \$1,521 | \$_____ | \$_____ |
| Long-term debt | 738 | 538 | _____ | _____ |
| Intermediate & long term | 1,669 | 1,215 | _____ | _____ |
| Intermediate & current debt | 1,346 | 983 | _____ | _____ |

Farm inventory balance is an accounting of the value of assets used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

FARM INVENTORY BALANCE

61 Northern Hudson Region Dairy Farms, 1994

| Item | Average of Region's Farms | |
|--------------------|---------------------------|-----------------------|
| | Real Estate | Machinery & Equipment |
| Value beg. of year | \$456,090 | \$160,640 |
| Purchases | \$14,349* | \$23,293 |
| Gift/inheritance | + 0 | + 0 |
| Lost capital | - 3,820 | |
| Sales | - 0 | - 1,039 |
| Depreciation | - 8,574 | - 16,420 |
| Net investment | = 1,955 | = 5,834 |
| Appreciation | + 4,733 | + 539 |
| Value end of year | \$462,778 | \$167,014 |

*\$2,827 land and \$11,522 buildings and/or depreciable improvements.

The Statement of Owner Equity has two purposes. It allows (1) verification that the accrual income statement and market value balance sheet are interrelated and consistent (in accountants terms, they reconcile) and (2) identification of the causes of change in equity that occurred on the farm during the year. The Statement of Owner Equity allows you to determine to what degree the change in equity was caused by (1) earnings from the business, and nonfarm income, in excess of withdrawals being retained in the business (called retained earnings), (2) outside capital being invested in the business or farm capital being removed from the business (called contributed/withdrawn capital) and (3) increases or decreases in the value (price) of assets owned by the business (called change in valuation equity).

Retained earnings is an excellent indicator of farm generated financial progress.

STATEMENT OF OWNER EQUITY (RECONCILIATION)
61 Northern Hudson Region Dairy Farms, 1994

Cash Flow Statement

Completing an annual cash flow statement is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The annual cash flow statement is structured to show net cash provided by operating activities, investing activities, financing activities and from reserves. All cash inflows and outflows, including beginning and end balances, are included. Therefore, the sum of net cash provided from all four activities should be zero. Any imbalance is the error from incorrect accounting of cash inflows/outflows.

ANNUAL CASH FLOW STATEMENT

61 Northern Hudson Region Dairy Farms, 1994

| Item | | Average | |
|---|----------------|------------------|--------------|
| Cash Flow from Operating Activities | | | |
| Cash farm receipts | \$403,945 | | |

Repayment Analysis

A valuable use of cash flow analysis is to compare the debt payments planned for the last year with the amount actually paid. The measures listed below provide a number of different perspectives on the repayment performance of the business. However, the critical question to many farmers and lenders is whether planned payments can be made in 1995. The cash flow projection worksheet on the next page can be used to estimate repayment ability, which can then be compared to planned 1995 debt payments shown below.

FARM DEBT PAYMENTS PLANNED

Same 50 Northern Hudson Region Dairy Farms, 1993 & 1994

| Debt Payments | Average | | | My Farm | | |
|-------------------------------------|--------------------------|----------|-----------------|--------------------------|---------|-----------------|
| | 1994 Payments Planned | Made | Planned 1995 | 1994 Payments Planned | Made | Planned 1995 |
| Long-term | \$12,444 | \$14,722 | \$13,974 | \$_____ | \$_____ | \$_____ |
| Intermediate-term | 32,262 | 38,461 | 34,067 | _____ | _____ | _____ |
| Short-term | 1,009 | 691 | 1,147 | _____ | _____ | _____ |
| Operating (net reduction) | 0 | 0 | 1,411 | _____ | _____ | _____ |
| Accounts payable (net reduction) | 340 | 769 | 555 | _____ | _____ | _____ |
| Total | \$46,056 | \$54,643 | \$51,153 | \$_____ | \$_____ | \$_____ |
| Per cow | \$346 | \$411 | | \$_____ | \$_____ | |
| Per cwt. 1994 milk | \$1.70 | \$2.02 | | \$_____ | \$_____ | |
| Percent of total 1994 receipts | 11% | 13% | | _____ | _____ | |
| Percent of 1994 milk receipts | 12% | 14% | | _____ | _____ | |

The cash flow coverage ratio measures the ability of the farm business to meet its planned debt payment schedule. The ratio shows the percentage of payments planned for 1994 (as of December 31, 1993) that could have been made with the amount available for debt service in 1994. Farmers who did not participate in DFBS in 1993 have their 1994 cash flow coverage ratio based on planned debt payments for 1995.

CASH FLOW COVERAGE RATIO

Same 50 Northern Hudson Region Dairy Farms, 1993 & 1994

| Item | Average | My Farm |
|---|-----------|---------|
| Cash farm receipts | \$414,125 | \$_____ |
| - Cash farm expenses | 356,899 | _____ |
| + Interest paid | 19,018 | _____ |
| - Net personal withdrawals from farm* | 29,410 | _____ |
| (A) = Amount Available for Debt Service | \$46,834 | \$_____ |
| (B) = Debt Payments Planned for 1994 (as of December 31, 1993) | \$46,056 | \$_____ |
| (A/B) = Cash Flow Coverage Ratio for 1994 | 1.02 | _____ |

*Personal withdrawals and family expenditures less nonfarm income and nonfarm money borrowed. If family withdrawals are excluded, or inaccurately included, the cash flow coverage ratio will be incorrect.

***Excludes change in interest account payable.

Cropping Analysis

The cropping program is an important part of the dairy farm business and often represents opportunities for improved productivity and profitability. A complete evaluation of what the available land resources are, how they are being used, how well crops are producing, and what it costs to produce them is important to evaluating alternative cropping and feed purchasing alternatives.

LAND RESOURCES AND CROP PRODUCTION
61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | | | My Farm | | |
|----------------------|--------------|---------------|------------------|--------------|------------------|-------|
| | Owned | Rented | Total | Owned | Rented | Total |
| Land | | | | | | |
| Tillable | 185 | 221 | 406 | _____ | _____ | _____ |
| Nontillable | 46 | 17 | 63 | _____ | _____ | _____ |
| Other nontillable | 105 | 11 | 116 | _____ | _____ | _____ |
| Total | 336 | 249 | 585 | _____ | _____ | _____ |
| Crop Yields | Farms | Acres* | Prod/Acre | Acres | Prod/Acre | |
| Hay crop | 60 | 210 | 2.68 tn DM | _____ | _____ | tn DM |
| Corn silage | 58 | 115 | 15.82 tn | _____ | _____ | tn |
| | | | 5.38 tn DM | _____ | _____ | tn DM |
| Other forage | 3 | 80 | 2.05 tn DM | _____ | _____ | tn DM |

| Wheat | 2 | 20 | 69.13 bu | _____ | _____ | bu |
| Other crops | 7 | 22 | | _____ | | |
| Tillable pasture | 12 | 35 | | _____ | | |
| Idle | 20 | 36 | | _____ | | |
| Total Tillable Acres | 61 | 406 | | _____ | | |

*This column represents the average acreage for the farms producing that crop. Average acreages including those farms not producing were hay crop 207, corn silage 109, corn grain 63, oats 1, tillable pasture 7, and idle 12.

Average crop acres and yields compiled for the region are for the farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent based on dry matter information provided.

The following crop/dairy ratios indicate the relationship between forage production, forage production resources, and the dairy herd.

CROP/DAIRY RATIOS
61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | My Farm |
|---|---------|---------|
| Total tillable acres per cow | 3.13 | _____ |
| Total forage acres per cow | 2.46 | _____ |
| Harvested forage dry matter, tons per cow | 8.77 | _____ |

Cropping Analysis (continued)

A number of cooperators have allocated crop expenses among the hay crop, corn, and other crops produced. Fertilizer and lime, seeds and plants, and spray and other crop expenses have been computed per acre and per production unit for hay and corn. Additional expense items such as fuels, labor, and machinery repairs are not included. Rotational grazing was used on one farm in the region.

Most machinery costs are associated with crop production and should be analyzed with the crop enterprise. Total machinery expenses include the major fixed costs (interest and depreciation), as well as the accrual operating costs. Although machinery costs have not been allocated to individual crops, they are shown below per total tillable acre.

ACCRUAL MACHINERY EXPENSES

Dairy Analysis

Analysis of the dairy enterprise can reveal a great deal about the strengths and weaknesses of the dairy farm business. Information on this page should be used in conjunction with DHI and other dairy production information. Changes in dairy herd size and market values that occur during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. Any change in inventory is included as an accrual farm receipt when calculating all of the profitability measures on pages 6 and 7.

DAIRY HERD INVENTORY
61 Northern Hudson Region Dairy Farms, 1994

| Item | Dairy Cows | | Heifers | | | | | |
|----------------------|------------|-----------|----------------------|----------|------|----------|--------|---------|
| | No. | Value | Bred | | Open | | Calves | |
| | No. | Value | No. | Value | No. | Value | No. | Value |

| Average number | _____ | | _____ (all age groups) | | | | | |

Total milk sold and milk sold per cow are extremely valuable measures of size and productivity, respectively, on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year. Farm managers on DHI should compare milk sold per cow with their rolling herd average on the test date nearest December 31 to see how close the DHI estimate of milk produced is to actual milk sales.

MILK PRODUCTION
61 Northern Hudson Region Dairy Farms, 1994

| Item | Average | My Farm |
|--|-----------|---------|
| Total milk sold, lbs. | 2,623,586 | _____ |
| Milk sold per cow, lbs. | 20,199 | _____ |
| Average milk plant test, percent butterfat | 3.74 | _____ |

The cost of producing milk has been compiled using the whole farm method and is featured in the following table. Accrual receipts from milk sales can be compared with the accrual costs of producing milk per cow and per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses including expansion livestock purchased. Purchased inputs cost of producing milk are the operating costs plus depreciation. Total costs of producing milk include the operating costs of producing milk plus depreciation on machinery and buildings, the value of unpaid family labor, the value of operators' labor and management, and the interest charge for using equity capital.

**ACCRUAL RECEIPTS FROM DAIRY, COSTS OF PRODUCING MILK,
AND PROFITABILITY**

Capital and Labor Efficiency Analysis

Capital efficiency factors measure how intensively the capital is being used in the farm business. Measures of labor efficiency are key indicators of management's success in generating products per unit of labor input.

CAPITAL EFFICIENCY

61 Northern Hudson Region Dairy Farms, 1994

| Item | Per Worker | Per Cow | Per Tillable Acre | Per Tillable Acre Owned |
|-----------------------|------------|---------|-------------------|-------------------------|
| Farm capital | \$250,204 | \$7,462 | \$2,387 | \$5,239 |
| Real estate | | \$3,537 | | \$2,483 |
| Machinery & equipment | \$43,021 | \$1,283 | \$410 | |

COMPARATIVE ANALYSIS OF THE FARM BUSINESS

Progress of the Farm Business

Comparing your business with average data from regional DFBS cooperators that participated in both of the last two years can be helpful to establishing your goals for these parameters. It is equally important for you to determine the progress your business has made over the past two or three years, to compare this progress to your goals, and to set goals for the future.

Regional Farm Business Chart

The Farm Business Chart is a tool which can be used in analyzing your business. Compare your business by drawing a line through or near the figure in each column which represents your current level of performance. The five figures in each column represent the average of each 20 percent or quintile of farms included in the regional summary. Use this information to identify business areas where more challenging goals are needed.

New York State Farm Business Charts

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 343 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

The cost control factors are ranked from low to high, but the lowest cost is not necessarily the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

Farm Business Charts for farms with freestall barns and 180 cows or less and more than 180 cows, and farms with conventional barns with 60 cows or less and more than 60 cows are shown on pages 28-31.

Financial Analysis Chart

The farm financial analysis chart on page 25 is designed just like the Farm Business Chart and may be used to assess the financial health of the farm business. Most of the financial measures used in the chart are defined on pages 6, 10, 14 and 20 of this publication. References to DFBS output page numbers for participating dairy farmers are provided in the table headings.

**Dollars of debt per dollar of equity, computed by dividing total liabilities by total equity.

***Return on all farm capital (no deduction for interest paid) divided by total farm assets.

Comparison by Type of Barn and Herd Size

When analyzing a dairy farm business by comparing it to a group of farms, it is important that the group of farms have used as many of the same physical characteristics as possible as the farm being analyzed. To assist in this endeavor, dairy farms in the summary have been divided into those with freestall and those with conventional housing. Conventional housing includes stanchion and tiestall barns. Within each group, is a further classification by size of the dairy herd.

The table of page 27 includes the average values for the resulting four groups of dairy farms. The average size of farms in the four groups ranges from 48 cows on the small conventional farms to 386 cows on the large freestall farms.

The large freestall farms averaged the highest milk output per cow and per worker, the lowest total costs of production and investment per cow, and the greatest returns to labor, management and capital. The small freestall farms showed average profits somewhat higher than the large conventional farm businesses.

Farm business charts have been computed for each of the four housing and herd size categories and are on pages 28-31. By comparing the farm's performance on the most appropriate business chart, a farm manager will be better able to evaluate his or her business performance.

Herd Size Comparisons

A detailed comparison of profitability, financial situation and business analysis factors across herd sizes is contained on pages 42-51 of the 1993 State Summary*. As herd size increases, the average profitability generally increases (pages 44-45). Net farm income without appreciation was \$195,640 per farm for the 300 or more herd size group and \$6,328 per farm for those with less than 40 cows. This relationship generally holds for all measures of profitability including rate of return on capital. However, the 85 to 99 herd size group showed a lower rate of return on capital in 1993 than the farms with 70 to 84 cows.

Farm net worth increases rapidly as herd size increases (pages 46-49)*, even though percent equity was higher on the smaller farms. The group with more than 300 cows demonstrated the strongest ability to make debt payments.

Crop yields showed little relationship to herd size, but fertilizer and lime expenses, and machinery cost per tillable acre generally increased as herd size increased (pages 50-51)*. The farms with 300 and more cows per farm averaged 18 percent more milk sold per cow than the smallest farms. All of the groups with 85 or more cows averaged well above 18,000 pounds of milk sold per cow while the farms smaller than 85 cows averaged 17,380 pounds of milk sold per cow. Farm capital per worker increased, and farm capital per cow decreased as herd size increased. Milk sold per worker increased dramatically as herd size increased, ranging from 366,798 pounds at the lowest herd size category up to 898,758 pounds at the largest size category.

IDENTIFY AND SET GOALS

If businesses are to be successful, they must have direction. Written goals help provide businesses with an identifiable direction over both the long and short term. Goal setting is as important on a dairy farm as it is in other businesses. Written goals are a tool which farm operators can use to ensure that the business continues to move in the proper direction. Goals should be SMART:

- 1. Goals should be Specific.
- 2. Goals should be Measurable.
- 3. Goals should be Achievable but challenging.
- 4. Goals should be Rewarding.
- 5. Goals should designate a Time when each goal will be achieved.

Goal setting on a dairy farm does not have to be a complex process. In many cases it provides a process for writing down and agreeing on goals that you have already given some thought to. It is also important to remember that once you write out your goals they are not cast in concrete. If a change takes place which has a major impact on the farm business, the goals should be reworked to accommodate that change. Refer to your goals as often as necessary to keep the farm business progressing.

It is important to identify both objectives (long-range) and goals (short-range) when looking at the future of your farm business.

A suggested format for writing out your goals is as follows:

- a. Begin with a mission statement which describes why the business exists based on the preferences and values of the owners.
- b. Identify 4-6 objectives.
- c. Identify SMART goals.

Worksheet for Setting Goals

I. Mission and Objectives

GLOSSARY AND LOCATION OF COMMON TERMS

Accounts Payable - Open accounts or bills owed to feed and supply firms, cattle dealers, veterinarians and other providers of farm services and supplies.

Accounts Receivable - Outstanding receipts from items sold or sales proceeds not yet received, such as the payment for December milk sales received in January.

Accrual Expenses - (defined on page 3)

Accrual Receipts - (defined on page 4)

Annual Cash Flow Statement - (defined on page 12)

Appreciation - (defined on page 5)

Asset Turnover Ratio - The ratio of total farm income to total farm assets, calculated by dividing total accrual operating receipts plus appreciation by average total farm assets.

Balance Sheet - A "snapshot" of the business financial position at a given point in time, usually December 31. The balance sheet equates the value of assets to liabilities plus net worth.

Capital Efficiency - The amount of capital invested per production unit. Relatively high investments per worker with low to moderate investments per cow imply efficient use of capital.

Cash From Nonfarm Capital Used in the Business - Transfers of money from nonfarm savings or investments to the farm business where it is used to pay operating expenses, make debt payments and/or capital purchases.

Cash Flow Coverage Ratio - (defined on page 14)

Cash Paid - (defined on page 2)

Cash Receipts - (defined on page 4)

Change in Accounts Payable - (defined on page 3)

Change in Accounts Receivable - (defined on page 4)

Change in Inventory - (defined on page 2)

Current Portion - (defined on page 7)

Dairy (farm) - A farm business where dairy farming is the primary enterprise, operating and managing this farm is a full-time occupation for one or more people and cropland is owned.

Dairy Cash-Crop (farm) - Operating and managing this farm is the full-time occupation of one or more people, cropland is owned but crop sales exceed 10 percent of accrual milk receipts.

Debt Per Cow - Total end-of-year debt divided by end-of-year number of cows.

Debt to Asset Ratios - (defined on page 10)

Deferred Taxes - (defined on page 9)

Dry Matter - The amount or proportion of dry material that remains after all water is removed. Commonly used to measure dry matter percent and tons of dry matter in feed.

Equity Capital - The farm operator/manager's owned capital or farm net worth.

Expansion Livestock - Purchased dairy cattle and other livestock that cause an increase in herd size from the beginning to the end of the year.

Farm Debt Payments as Percent of Milk Sales - Amount of milk income committed to debt repayment, calculated by dividing planned debt payments by total milk receipts. A reliable measure of repayment ability, see page 14.

Farm Debt Payments Per Cow - Planned or scheduled debt payments per cow represent the repayment plan scheduled at the beginning of the year divided by the average number of cows for the year. This measure of repayment ability is used in the Financial Analysis Chart.

Financial Lease - A long-term non-cancellable contract giving the lessee use of an asset in exchange for a series of lease payments. The term of a financial lease usually covers a major portion of the economic life of the asset. The lease is a substitute for purchase. The lessor retains ownership of the asset.

Income Statement - A complete and accurate account of farm business receipts and expenses used to measure profitability over a period of time such as one year or one month.

Labor and Management Income - (defined on page 6)

Labor and Management Income Per Operator - The return to the owner/manager's labor and management per full-time operator.

Labor Efficiency - Production capacity and output per worker.

Liquidity - Ability of business to generate cash to make debt payments or to convert assets to cash.

Net Farm Income - (defined on page 5)

Net Worth - The value of assets less liabilities equal net worth. It is the equity the owner has in owned assets.

Operating Costs of Producing Milk - (defined on page 19)

Opportunity Costs - The cost or charge made for using a resource based on its value in its most likely alternative use. The opportunity cost of a farmer's labor and management is the value he/she would receive if employed in his/her most qualified alternative position.

Other Livestock Expenses - All other dairy herd and livestock expenses not included in more specific categories. Other livestock expenses include; bedding, DHIC, milk house and parlor supplies, livestock board, registration fees and transfers.

Part-Time Cash-Crop Dairy (farm) - Operating and managing this farm is not a full-time occupation, crop sales exceed 10 percent of accrual milk receipts and cropland is owned.

Part-Time Dairy (farm) - Dairy farming is the primary enterprise, cropland is owned but operating and managing this farm is not a full-time occupation for one or more people.

Personal Withdrawals and Family Expenditures Including Nonfarm Debt Payments - All the money removed from the farm business for personal or nonfarm use including family living expenses, health and life insurance, income taxes, nonfarm debt payments, and investments.

Profitability - The return or net income the owner/manager receives for using one or more of his or her resources in the farm business. True "economic profit" is what remains after deducting all the costs including the opportunity costs of the owner/manager's labor, management, and equity capital.

Purchased Inputs Cost of Producing Milk - (defined on page 19)

Repayment Analysis - An evaluation of the business' ability to make planned debt payments.

Replacement Livestock - Dairy cattle and other livestock purchased to replace those that were culled or sold from the herd during the year.

Return on Equity Capital - (defined on page 7)

Return on Total Capital - (defined on page 7)

Return to Operators' Labor, Management, and Equity Capital - (defined on page 6)

Solvency - The extent or ability of assets to cover or pay liabilities. Debt/asset and leverage ratios are common measures of solvency.

Total Costs of Producing Milk - (defined on page 19)

Whole Farm Method - A procedure used to calculate costs of producing milk on dairy farms without using enterprise cost accounts. All non-milk receipts are assigned a cost equal to their sale value and deducted from total farm expenses to determine the costs of producing milk.
