## 2012 DAIRY FARM BUSINESS SUMMARY SMALL HERD DAIRY FARMS\*

### INTRODUCTION

Dairy farm managers throughout New York State have been participating in Cornell Cooperative Extension's farm business summary and analysis program since the early 1950's. Managers of each participating farm business receive a comprehensive summary and analysis of their farm business. The information in this report represents averages of the data submitted from dairy farms in New York for 2012 with herds of 120 cows or fewer.

Small farms are facing increasing management challenges in their efforts to control costs and remain profitable. This publication reports the average performance and characteristics of small farms and the average of the Top 50 Percent of those small farms with the highest rate of return on assets without appreciation. Thus, not only can the average performance of small farms be used as a benchmark, but the performance of the most profitable small farms as well. Identifying strengths and areas for improvement by comparing your business to that of similar farms is an important first step in focusing attention on ways to improve the business.

### **Program Objective**

The primary objective of the dairy farm business summary, DFBS, is to help farm managers improve the business and financial management of their business through appropriate use of historical data and the application of modern farm business analysis techniques. This information can also be used to establish goals that enable the business to better fulfill its mission. In short, DFBS provides business and financial information needed in identifying and evaluating strengths and weaknesses of the farm business.

### **Format Features**

This report follows the same general format as the 2012 DFBS individual farm report received by participating dairy farmers. The analysis tables have a column that compares the average to the top 50% of the farms by rate of return on all capital without appreciation. This report may be used by any dairy farm manager who wants to compare his or her business with the average data of small farms. The individual farm data, the averages and other data can then be used to establish goals for the business. Non-DFBS participants can register and download a DFBS Data Check-in Form at <http://dfbs.cornell.edu>. After collecting the data on the form, it can be entered in the U. S. Top Dairies business summary program at the same web site to obtain a summary of their business. More information about the Dairy Farm Business Summary and Analysis Project may be found at <http://dfbs.dyson.cornell.edu/>.

This report features:

- (1) an income statement including accrual adjustments for farm business expenses and receipts, as well as measures of profitability with and without appreciation,
- (2) a complete balance sheet with analytical ratios;
- (3) a statement of owner equity which shows the sources of the change in owner equity during the year;
- (4) a cash flow statement and debt repayment ability analysis;
- (5) an analysis of crop acreage, yields, and expenses;
- (6) an analysis of dairy livestock numbers, production, and expenses;
- (7) a capital and labor efficiency analysis; and
- (8) progress of the farm business over the past two years.

---

\*The small herd summary is comprised of farms with 120 or fewer cows. Many counties had farms that met this criteria in 2012. This report was written by Wayne A. Knoblauch, Professor, Farm Management; Mariane Kiraly, Cooperative Extension Educator in Delaware County; and Jason Karszes, Senior Extension Associate, Pro-Dairy. Cathryn Dymond was in charge of data and publication preparation.

## PROGRESS OF THE FARM BUSINESS

2012 was a year of extremes across the country. Unusually dry weather in the Midwest and portions of New York greatly influenced corn and soybean yields making for record high prices for purchased grains with corresponding small inventories of ending stocks. Input costs increased dramatically and farmers had to make do with less capital expenditures and took less profit, if any, out of their farms.

The same 25 farms participated in both 2011 and 2012 for this report. Average farm size grew 2.7% from 75 to 77 cows while heifer inventory stayed the same at 64. Tillable acres rose 2.7%, matching the increase in herd size. Hay DM ton/acres fell from 2.2 tons to 1.9 tons or 13.6% due to dry weather. Corn silage/acre increased 3.1% to 16.8 tons/acres due to advances in corn varieties' ability to perform in dry weather. Milk sold per cow decreased 1.6% likely due to lesser quality/quantity of forage and expensive purchased grain. Worker equivalents rose 1.6% reflecting the need for more help with more cows, cropland and perhaps reflecting family members working off the farm. Cows per worker stayed the same at 31. Milk sold/worker fell slightly by 0.1%.

Hired labor cost per hundredweight fell 3.8% percent from \$1.32 to \$1.27, reflecting a lowering of the average cost per worker equivalent on these farms; as cost per worker dropped 4%. Hired labor as a percent of milk sales rose 3.3% reflecting lower milk prices and more labor.

Grain and concentrate purchased as a percent of milk sales increased 17% from 29% to 34%. Grain and concentrate per hundredweight of milk increased from \$6.26 per hundredweight to \$6.79 per hundredweight or 8.5%. Dairy feed and crop expense/cwt increased 8.8% in response to higher fuel, seed, and crop expenses. Total farm operating expenses per hundredweight sold increased 12.3% from \$18.42 to \$20.68. Interest costs fell 9.8%, driven by lower interest rates even as borrowed capital increased slightly. Milk marketing costs rose 4.3% with higher fuel and transportation costs passed on to farmers by haulers. The operating cost of producing milk per hundredweight grew 0.2% from \$15.33 to \$15.36 as changes to non-milk income largely offset the increase in input costs during the year and as farmers monitored inputs closely.

Farm capital per cow increased 3.3 percent and machinery and equipment per cow was down 1.6% with few new investments for replacement of equipment. An 11.1% decrease in the asset turnover ratio was the result of decreasing milk price coupled with a small decrease in milk production per cow.

Gross sales per hundredweight fell from \$21.63 to \$19.95 per hundredweight, or 7.8%. Gross milk sales per cow fell 8.7% from \$4,279 per cow to \$3,907 due to lower milk prices and less milk per cow. At the same time, beef prices rose continually and that helped generate more cash flow. Dairy cattle sales per cow went from \$209 to \$243, an increase of 16.3%. Calf sales per cow declined from \$35 to \$10, a 71.4% decrease with farmers not wanting to feed excess heifers and a glut of animals on the market. An increase in government receipts from \$0.58 per hundredweight to \$0.85 per hundredweight was due to MILC payments late in the year.

Net farm income without appreciation fell from \$68,888 to \$45,330, a 34.2% decrease. Net farm income with appreciation fell to \$59,577. Labor and management income per operator fell from \$20,647 to \$3,278 or 115.9%. A positive rate of return on equity of 0.4% was due to farmers stretching each dollar and forgoing purchases. The rate of return on all capital without appreciation fell 78.6 percent. Farm net worth continues to rise (5.1%) due to an increase in land values. Farm debt per cow grew 6.8% from \$2,779 to \$2,967 as farmers tried to keep up with increased input costs and capital investments.

2012 was a stressful time with farmers coping with high feed prices, lower milk income, and less money for family living, investments, or equipment replacement. Farms showed slightly positive returns, it was not without a lot of juggling and a reluctance to go into debt to feed expensive grain but rather to take a little less milk, make cows comfortable, and limit purchases and input costs to more closely match the conditions at hand.

The importance of trend analysis is to identify what areas changed, ask why they changed, and look at what you can do differently in the future to influence that change. Comparing your business' performance with average data from these DFBS dairy farms can help you establish goals for your business. It is equally important to determine the progress your business has made over the past two or three years, to compare this progress to your goals, and to set goals for the future.

**PROGRESS OF THE FARM BUSINESS**  
Same 25 Small Herd Dairy Farms, 2011 & 2012

Selected Factors	Average of 25 Farms		Percent Change
	2011	2012	
<u>Size of Business</u>			
Average number of cows	75	77	2.7
Average number of heifers	64	64	0.0
Milk sold, pounds	1,487,710	1,510,445	1.5
Worker equivalent	2.43	2.47	1.6
Total tillable acres	225	231	2.7
<u>Rates of Production</u>			
Milk sold per cow, pounds	19,783	19,586	-1.0
Hay DM per acre, tons	2.2	1.9	-13.6
Corn silage per acre, tons	16.3	16.8	3.1
<u>Labor Efficiency &amp; Costs</u>			
Cows per worker	31	31	0.0
Milk sold per worker, pounds	612,226	611,516	-0.1
Hired labor cost per hundredweight	\$1.32	\$1.27	-3.8
Hired labor cost per worker	\$8,060	\$7,737	-4.0
Hired labor cost as % of milk sales	6.1%	6.3%	3.3
<u>Cost Control</u>			
Grain & concentrate purchased as % of milk sales	29%	34%	17.2
Grain & concentrate per hundredweight milk	\$6.26	\$6.79	8.5
Dairy feed & crop expense per cwt. milk	\$7.92	\$8.62	8.8
Labor & machinery costs per cow	\$1,908	\$1,909	0.1
Total farm operating expenses per cwt. sold	\$18.42	\$20.68	12.3
Interest costs per hundredweight milk	\$0.61	\$0.55	-9.8
Milk marketing costs per cwt. milk sold	\$1.16	\$1.21	4.3
Operating cost of producing cwt. of milk	\$15.33	\$15.36	0.2
<u>Capital Efficiency (average for the year)</u>			
Farm capital per cow*	\$11,646	\$12,026	3.3
Machinery & equipment per cow	\$2,496	\$2,455	-1.6
Asset turnover ratio*	0.45	0.40	-11.1
<u>Income Generation</u>			
Gross milk sales per cow	\$4,279	\$3,907	-8.7
Gross milk sales per hundredweight	\$21.63	\$19.95	-7.8
Net milk sales per hundredweight	\$20.46	\$18.74	-8.4
Dairy cattle sales per cow	\$209	\$243	16.3
Dairy calf sales per cow	\$35	\$10	-71.4
Government receipts per hundredweight	\$0.58	\$0.85	46.6
<u>Profitability</u>			
Net farm income without appreciation	\$68,888	\$45,330	-34.2
Net farm income with appreciation	\$93,149	\$59,577	-36.0
Labor & management income per oper./manager	\$20,647	\$-3,278	-115.9
Rate of return on equity capital with appreciation	6.0%	0.4%	-93.3
Rate of return on all capital with appreciation	5.6%	1.2%	-78.6
<u>Financial Summary</u>			
Farm net worth, end year	\$690,664	\$726,163	5.1
Debt to asset ratio	0.23	0.24	4.3
Farm debt per cow	\$2,779	\$2,967	6.8

\*Rented farms are excluded from these factors.

## SUMMARY AND ANALYSIS OF THE FARM BUSINESS

### Business Characteristics

Planning optimal management strategies is a crucial component of operating a successful farm. Various combinations of farm resources, enterprises, business arrangements, and management techniques are used by the dairy farmers. The following table shows important farm business characteristics and the number of farms with each characteristic.

#### BUSINESS CHARACTERISTICS

34 Small Herd Dairy Farms, 2012

Type of Farm	Number	Milking System	Number
Dairy	34	Bucket & carry	0
Part-time dairy	0	Dumping station	1
Dairy cash-crop	0	Pipeline	20
Certified organic milk producer	0	Herringbone parlor	7
Rotational grazing farms	11	Other parlor	6
Type of Ownership	Number	Production Records	Number
Owner	30	Testing service	26
Renter	4	On-farm system	2
		Other	1
		None	5
Type of Business	Number	Business Record System	Number
Sole Proprietorship	28	Account Book	11
Partnership	5	Accounting Service	3
LLC	1	On-farm computer	20
		Other	0
Type of Barn	Number	Breed of Herd	Percent
Stanchion or Tie-Stall	20	Holstein	86
Freestall	14	Jersey	5
Combination	0	Other	9
Milking Frequency	Number		
2 times per day	33		
3 times per day	0		
Other	1		

### Income Statement

In order for an income statement to accurately measure farm income, it must include cash transactions and accrual adjustments (changes in accounts payable, accounts receivable, inventories, and prepaid expenses).

Cash paid is the actual cash outlay during the year and does not necessarily represent the cost of goods and services actually used in 2012.

Change in inventory: Increases in inventories of supplies and other purchased inputs are subtracted in computing accrual expenses because they represent purchased inputs not actually used during the year. Decreases in purchased inventories are added to expenses because they represent inputs purchased in a prior year and used this year.

Change in prepaid expenses (noted by <<) is a net change in non-inventory expenses that have been paid in advance of their use. For example, prepaid lease expense on the beginning of year balance sheet represents last year's payment for use of the asset during this year. End of year prepaid expense represents payments made this year for next year's use of the asset. Adding payments made last year for this year's use of the asset, and subtracting payments made this year for next year's use of the asset is accomplished by subtracting the difference.

**CASH AND ACCRUAL FARM EXPENSES**

34 Small Herd Dairy Farms, 2012

Expense Item	Cash Paid	-	Change in Inventory or Prepaid Expense	+	Change in Accounts Payable	=	Accrual Expenses
<u>Hired Labor</u>	\$ 19,139	\$	0	<<	\$ -48	\$	19,091
<u>Feed</u>

<u>Crops</u>							
Fertilizer & lime	7,057		-479		61		7,597
Seeds & plants	5,934		-154		-40		6,048
Spray, other crop expense	3,629		-125		-7		3,747
Crop professional fees	6		0	<<	0		6
<u>Real Estate</u>							
Land, building & fence repair	4,901		-21		-11		4,911
Taxes	6,675		0	<<	0		6,675
Rent & lease	4,543		0	<<	0		4,543
<u>Other</u>							
Insurance	4,537		-184	<<	-50		4,671
Utilities (farm share)	8,803		0	<<	-2		8,801
Interest paid	7,167		0	<<	0		7,167
Other professional fees	1,372		0	<<	29		1,402
Miscellaneous	1,236		9		2		1,229
Total Operating	\$266,208		\$-426		\$4,745		\$271,379
Expansion livestock	1,090		0	<<	0		1,090
Extraordinary expense	361		0	<<	0		361
Machinery depreciation							15,396
Building depreciation							4,879
<b>TOTAL ACCRUAL EXPENSES</b>							<b>\$293,105</b>

Change in accounts payable: An increase in accounts payable from beginning to end of year is added when calculating accrual expenses because these expenses were incurred (resources used) in 2012 but not paid for. A decrease is subtracted because it represents payment for resources used before 2012.

Accrual expenses are an estimate of the costs of inputs, except operator/family labor and equity capital, actually used in this year's production. They are the cash paid, less changes in inventory and prepaid expenses, plus accounts payable.

**CASH AND ACCRUAL FARM RECEIPTS**

34 Small Herd Dairy Farms, 2012

Receipt Item	Cash Receipts	+	Change in Inventory	+	Change in Accounts Receivable	=	Accrual Receipts
Milk sales	\$ 281,220				\$ 986		\$ 282,206
Dairy cattle	18,189		\$ 929		0		19,117
Dairy calves	2,300		-1,493		0		807
Other livestock	573		529		0		1,102
Crops	2,561		11,024		274		13,858
Government receipts	12,065		0 *		-232		11,832
Custom machine work	394				0		394
Gas tax refund	145				0		145
Other	<u>5,170</u>				<u>-91</u>		5,079
Less nonfarm noncash capital**		(-)	<u>0</u> **			(-)	<u>0</u>
Total Receipts	\$ 322,617		\$ 10,988		\$ 936		\$ 334,542

\*Change in advanced government receipts.

\*\*Gifts or inheritances of cattle or crops included in inventory.

Cash receipts include the gross value of milk checks received during the year plus all other payments received from the sale of farm products, services, and government programs. Nonfarm income is not included in calculating farm profitability.

Changes in inventory of assets produced by the business are calculated by subtracting beginning of year values from end of year values excluding appreciation. Increases in livestock inventory caused by herd growth and/or quality are added, and decreases caused by herd reduction and/or quality are subtracted. Changes in inventories of crops grown are also included. An increase in advanced government receipts is subtracted from cash income because it represents income received in 2012 for the 2013 crop year in excess of funds earned for 2012. Likewise, a decrease is added to cash government receipts because it represents funds earned for 2012 but received in 2011.

Changes in accounts receivable are calculated by subtracting beginning year balances from end year balances. Payments in January 2013 for milk produced in December 2012 compared to January 2012 payments for milk produced in 2011 are included as a change in accounts receivable in determining accrual milk sales.

Accrual receipts represent the value of all farm commodities produced and services actually generated by the farm business during the year.

**Profitability Analysis**

Farm operators\* contribute labor, management, and equity capital to their businesses and the combination of these resources, and the other resources used in the business, determines profitability. Farm profitability can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

The return to any individual resource must be viewed as an estimate because the cost of other family resources must be approximated to calculate returns to the selected resource. For example, the costs of operator and family labor and management must be approximated to calculate the returns to equity capital.

\* Operators are the individuals who are integrally involved in the operation and management of the farm business. They are not limited to those who are the owner of a sole proprietorship or are formally a member of the partnership or corporation.

Net farm income is the return to the farm operators and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, and financing the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed both with and without appreciation. Appreciation represents the change in values caused by annual changes in prices of livestock, machinery, real estate inventory, and stocks and certificates (other than Farm Credit). Appreciation is a major factor contributing to changes in farm net worth and must be included for a complete profitability analysis.

**NET FARM INCOME**  
34 Small Herd Dairy Farms, 2012

Item	Average 34 Farms		Top 50% Farms*	
	Total	Per Cow	Total	Per Cow
Total accrual receipts	\$ 334,542		\$ 426,048	
Appreciation: Livestock	1,483		2,545	
Machinery	1,585		2,049	
Real Estate	10,369		10,472	
Other Stock & Certificates	135		0	
Total Including Appreciation	\$ 348,113		\$ 441,113	
Total accrual expenses	- 293,105		- 347,570	
Net Farm Income (with appreciation)	\$ 55,008	\$ 753	\$ 93,543	\$1,096
Net Farm Income (without appreciation)	\$ 41,437	\$ 567	\$ 78,570	\$ 919

\*Top 50% of small herd farms by rate of return on all assets without appreciation.

The chart below shows the relationship between net farm income per cow (without appreciation) and pounds of milk sold per cow. Higher net farm incomes can be achieved across a range of production levels as a result of different management systems, such as grazing, being utilized by the participating dairies.

**NET FARM INCOME PER COW AND MILK PER COW**  
34 Small Herd Dairy Farms, 2012

Labor and management income is the return which farm operators receive for their labor and management used in the farm business. Appreciation is not included as part of the return to labor and management because it results from ownership of assets rather than management of the farm business. Labor and management income is calculated by deducting a charge for unpaid family labor and the opportunity cost of equity capital, at a real interest rate of five percent, from net farm income excluding appreciation. The interest charge of five percent reflects the long-term average rate of return above inflation that a farmer might expect to earn in comparable risk investments.

### LABOR AND MANAGEMENT INCOME

34 Small Herd Dairy Farms, 2012

Item	Average 34 Farms	Top 50% Farms
Net farm income without appreciation	\$ 41,437	\$ 78,478
Family labor unpaid @ \$2,550 per month	- 12,686	- 14,269
Interest on \$629,123 average equity capital @ 5% real rate (\$731,483 average equity capital for top 50% farms)	- <u>31,456</u>	- <u>36,574</u>
Labor & Management Income per farm (1.22 Operators/farm) (1.18 operators per farm for top 50% farms)	\$ -2,706	\$ 27,635
Labor & Management Income per Operator/Manager	\$ -2,218	\$ 23,419

Labor and management income per operator averaged \$-2,218 on these 34 farms in 2012. The range in labor and management income per operator was from less than \$-214,300 to more than \$51,400. Returns to labor and management were less than \$0 on 38 percent of the farms. Labor and management incomes per operator were between \$0 and \$40,000 on 53 percent of the farms while 9 percent had labor and management incomes per operator greater than \$40,000.

### DISTRIBUTION OF LABOR & MANAGEMENT INCOMES PER OPERATOR 34 Small Herd Dairy Farms, 2012

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital. Rate of return on total capital is calculated by adding interest paid to the return on equity capital and then dividing by average farm assets. Net farm income from operations ratio is net farm income (without appreciation) divided by total accrual receipts.

**RETURN ON EQUITY CAPITAL AND RETURN ON TOTAL CAPITAL**  
34 Small Herd Dairy Farms, 2012

Item	Average 34 Farms	Top 50% Farms
Net farm income with appreciation	\$ 55,008	\$ 93,543

with appreciation	0.8%	4.6%
without appreciation	-0.9%	3.0%
Net farm income from operations ratio	0.12	0.18

**Farm and Family Financial Status**

The first step in evaluating the financial position of the farm is to construct a balance sheet which identifies and values all the assets and liabilities of the business. The second step is to evaluate the relationship between assets, liabilities, and net worth and changes that occurred during the year.

Financial lease obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments by signing the lease. The present value is also listed as an asset, representing the future value the item has to the business. For 2012, lease payments were discounted by 7 percent to obtain their present value.

Advanced government receipts are included as current liabilities. Government payments received in 2012 that are for participation in the 2013 program are the end year balance and payments received in 2011 for participation in the 2012 program are the beginning year balance.

Current Portion or principal due in the next year for intermediate and long term debt is included as a current liability.

Total Liabilities	207,384	204,454
<b>TOTAL FARM &amp; NONFARM NET WORTH</b>	<b>\$ 731,206</b>	<b>\$ 787,530</b>

\*Assumes that average nonfarm assets and liabilities for the nonreporting farms were the same as for those reporting.

Balance sheet analysis involves examination of relative asset and debt levels for the business. Percent equity is calculated by dividing end of year net worth by end of year assets and multiplying by 100. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect business solvency and the potential capacity to borrow. The leverage ratio is the dollar of debt per dollar of equity, computed by dividing total farm liabilities by farm net worth. Debt levels per productive unit represent old standards that are still useful if used with measures of cash flow and repayment ability. A current ratio of less than 1.5 or that has been falling warrants additional evaluation. The amount of working capital that is adequate must be related to the size of the farm business.

Intermediate & current debt	1,951	1,341	2,071	1,490

Farm inventory balance is an accounting of the value of assets used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

**FARM INVENTORY BALANCE**

Appreciation		+ 10,369		+ 1,585
Value end of year	\$	389,337	\$	170,271

\*\$17,348 land and \$19,899 buildings and/or depreciable improvements.

The Statement of Owner Equity has two purposes. It allows (1) verification that the accrual income statement and market value balance sheet are consistent (in accountants terms, they reconcile) and (2) identification of the causes of change in equity that occurred on the farm during the year. The Statement of Owner Equity allows you to determine to what degree the change in equity was caused by (1) earnings from the business, and nonfarm income, in excess of withdrawals being retained in the business (called retained earnings), (2) outside capital being invested in the business or farm capital being removed from the business (called contributed/withdrawn capital) , (3) increases or decreases in the value (price) of assets owned by the business (called change in valuation equity), and (4) the error in the business cash flow accounting.

Retained earnings is an excellent indicator of farm generated financial progress.

**Cash Flow Statement**

Completing an annual cash flow statement is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The annual cash flow statement is structured to show net cash provided by operating activities, investing activities, financing activities and from reserves. All cash inflows and outflows, including beginning and end balances, are included. Therefore, the sum of net cash provided from all four activities should be zero. Any imbalance is the error from incorrect accounting of cash inflows/outflows.

## Repayment Analysis

A valuable use of cash flow analysis is to compare the debt payments planned for the last year with the amount actually paid. The measures listed below provide a number of different perspectives on the repayment performance of the business. However, the critical question to many farmers and lenders is whether planned payments can be made in 2013. The cash flow projection worksheet on the next page can be used to estimate repayment ability, which can then be compared to planned 2013 debt payments shown below.

### FARM DEBT PAYMENTS PLANNED

Small Herd Dairy Farms, 2011 & 2012

Debt Payments	Same 29 Dairy Farms			Same 16 Top 50% Farms

Percent of 2012 milk receipts	13%	16%		13%	13%	

The cash flow coverage ratio and debt coverage ratio measure the ability of the farm business to meet its planned debt payments schedule. The ratios show the percentage of payments planned for 2012 (as of December 31, 2011) that could have been made with the amount available for debt service in 2012. Farmers who did not participate in DFBS in 2011 have their 2012 cash flow coverage ratio based on planned debt payments for 2013.

### COVERAGE RATIOS

Same 29 Small Herd Dairy Farms, 2011 & 2012

Item	Average	Item	Average
<u>Cash Flow Coverage Ratio</u>		<u>Debt Coverage Ratio</u>	
Cash farm receipts	\$316,821	Net farm income (without appreciation)	\$43,754

### Cropping Analysis

The cropping program is an important part of the dairy farm business and often represents opportunities for improved productivity and profitability. A complete evaluation of what the available land resources are, how they are being used, the level of crop yields, and what it costs to produce crops is important in evaluating alternative cropping and feed purchasing alternatives.

#### LAND RESOURCES AND CROP PRODUCTION

34 Small Herd Dairy Farms, 2012

Item	Average 34 Farms			Top 50% Farm		
<u>Land</u>	<u>Owned</u>	<u>Rented</u>	<u>Total</u>	<u>Owned</u>	<u>Rented</u>	<u>Total</u>
Tillable	106	114	220	121	137	258
Nontillable	25	14	39	22	11	33
Other nontillable	79	11	90	89	1	90
Total	209	139	348	233	148	381
<u>Crop Yields</u>	<u>Farms</u>	<u>Acres*</u>	<u>Production/Acre</u>	<u>Farms</u>	<u>Acres</u>	<u>Production/Acre</u>
Hay crop	32	159	1.93 tn DM	16	183	1.72 tn DM
Corn silage	26	64	16.61 tn 5.65 tn DM	13	82	16.96 tn 5.86 tn DM
Other forage	3	28	3.95 tn DM	1	35	4.51 tn DM
Total forage	32	213	2.86 tn DM	16	252	2.84 tn DM
Corn grain	7	21	117 bu	3	28	131 bu
Oats	0	0	0 bu	0	0	0 bu
Wheat	2	20	48 bu	0	0	0 bu
Other crops	6	22		1	33	
Tillable pasture	6	52		3	79	
Idle	3	15		0	0	
Total Tillable Acres	34	220		17	258	

\*This column represents the average acreage for the farms producing that crop. Average acreages including those farms not producing were hay crop 150, corn silage 49, corn grain 4, oats 0, tillable pasture 9, and idle 1.

Average crop acres and yields are for the farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent based on dry matter information provided.

The following crop/dairy ratios indicate the relationship between forage production, forage production resources, and the dairy herd.

#### CROP/DAIRY RATIOS

32 Small Herd Dairy Farms, 2012\*\*

Item	Average 32 Farms	Top 50% Farm
Total tillable acres per cow	3.12	3.11
Total forage acres per cow	2.86	2.86
Harvested forage dry matter, tons per cow	8.18	8.11

\*\*Excludes farms that do not harvest forages.

**Cropping Analysis** (continued)

Crop input costs per tillable acre are reported in the table below. The chart below shows the relationship between total forage dry matter per acre and total crop input costs. Intensive grazing was used on 11 farms, 6 of which are in the "top 50% farms" group.

**CROP RELATED ACCRUAL EXPENSES**

Average number of acres	216		232	
Fertilizer & lime expenses	\$	36.98	\$	46.96
Seeds & plants		27.16		31.66
Spray & other crop expenses		<u>17.10</u>		<u>15.35</u>
TOTAL	\$	81.24	\$	93.97

**CROP EXPENSE PER ACRE AND TOTAL FORAGE PRODUCTION PER ACRE**  
32 Small Herd Farms That Grow Forages, 2012

Most machinery costs are associated with crop production and should be analyzed with the crop enterprise. Total machinery expenses include the major fixed costs (interest and depreciation), as well as the accrual operating costs. Although machinery costs have not been allocated to individual crops, they are shown below per total tillable acre.

**ACCRUAL MACHINERY EXPENSES**  
32 Small Herd Dairy Farms That Grow Forages, 2012

Machinery Expense	Average 32 Farms		Top 50% Farms	
	Total Expenses	Per Tillable Acre	Total Expenses	Per Tillable Acre
Fuel, oil & grease	\$ 15,566	\$ 66.82	\$ 18,890	\$ 68.87
Machinery repair & vehicle expense	18,935	81.28	22,300	81.30

Interest (5%)	8,938	38.37	10,728	39.11
Depreciation	<u>16,046</u>	<u>68.87</u>	<u>19,223</u>	<u>70.08</u>
Total	\$ 68,058	\$ 292.14	\$ 82,545	\$ 300.93

**Dairy Analysis**

Analysis of the dairy enterprise can reveal strengths and weaknesses of the dairy farm business. Information on this page should be used in conjunction with DHI and other dairy production information. Changes in dairy herd size and market values that occur during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. Any change in inventory is included as an accrual farm receipt when calculating all of the profitability measures on pages 8 and 9.

**DAIRY HERD INVENTORY**  
34 Small Herd Dairy Farms, 2012

Item	Dairy Cows		Heifer					
	No.	Value	Bred		Open		Calves	
			No.	Value	No.	Value	No.	Value
<u>Average 34 Farms:</u>

End including leased	87							
Average number	85		73	(all age groups)				

Total milk sold and milk sold per cow are extremely valuable measures of size and productivity, respectively, on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year. Farm managers on DHI should compare milk sold per cow with their rolling herd average on the test date nearest December 31 to see how close the DHI estimate of milk produced is to actual milk sales.

**MILK PRODUCTION**  
34 Small Herd Dairy Farms, 2012

Item	Average 34 Farms	Top 50% Farms
Total milk sold, lbs.	1,405,521	1,767,944
Milk sold per cow, lbs.	19,230	20,714
Average milk plant test, percent butterfat (average of farms reporting)	2.55	2.75

Monitoring and evaluating culling practices and experiences on an annual basis are important herd management tools. Culling rate can have an affect on both milk per cow and profitability.

**ANIMALS LEAVING THE HERD**  
34 Small Herd Dairy Farms, 2012

Item	Average 34 Farms		Top 50% Farms	
	Number	Percent*	Number	Percent*
Cows sold for beef	17	23.9	20	23.6
Cows sold for dairy	3	4.6	1	1.5
Cows died	3	4.2	3	3.7
Culling rate**		28.0		27.0

\*Percent of average number of cows in the herd.

\*\*Cows sold for beef plus cows died.

The cost of producing milk has been compiled using the whole farm method and is featured in the following table. Accrual receipts from milk sales can be compared with the accrual costs of producing milk per cow and per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses including expansion livestock purchased. Purchased inputs cost of producing milk are the operating costs plus depreciation. Total costs of producing milk include the operating costs of producing milk plus depreciation on machinery and buildings, the value of unpaid family labor, the value of operators' labor and management, and the interest charge for using equity capital.

**ACCRUAL RECEIPTS FROM DAIRY, COSTS OF PRODUCING MILK,  
AND PROFITABILITY**

## COMPARATIVE ANALYSIS OF THE FARM BUSINESS

### Comparison to Top 50 Percent

Comparing your business with average data from DFBS cooperators that participated in both of the last two years can be helpful in establishing your goals for these parameters. Both the average of the same 25 farms and the top 50% of farms based on rate of return of all assets without appreciation are presented below. It is equally important for you to determine the progress your business has made over the past two or three years, to compare this progress to your goals, and to set goals for the future.

### PROGRESS OF THE FARM BUSINESS Same 25 Small Herd Dairy Farms, 2011 & 2012

### Regional Farm Business Chart

The Farm Business Chart is a tool which can be used in analyzing your business. Compare your business by drawing a line through or near the figure in each column which represents your current level of performance. The five figures in each column represent the average of each 20 percent or quintile of farms included in the regional summary. Use this information to identify business areas where more challenging goals are needed.

## **Supplementary Information**

Each year DFBS cooperators volunteer to complete supplementary data collection forms looking at selected management aspects of the business or specific research areas being studied. This is in addition to the normal DFBS data collection form. One area that was examined this year was the source of dairy replacements.

### **SOURCE OF DAIRY REPLACEMENTS** 15 New York Dairy Farms, 2012

<u>Animals Entering Herd</u>	<u>Average</u>
Number calving in 2012 for first time	353
Animals purchased, %*	4.0%
Animals raised by farm, %**	96.0%
 <u>Current Heifer Inventory</u>	
Raised on dairy, %	87.1%
Raised by a custom grower, %	12.8%

\* Animals purchased are animals purchased from a different farm and were not the farms genetics.

\*\*Animals raised by farm are animals that were born on the farm and entered the herd, which includes animals raised by the farm or custom grower.

On the average farm, 353 animals calved for the first time in 2012. The breakdown on the source of these animals was 4.0 percent purchased and 96.0 percent raised on the farm. Of the current heifer inventory, 87.1 percent were raised on the dairy and 12.8 percent were raised by a custom grower. There is increased interest in evaluating the dairy replacement enterprise.

## **Milk Income and Marketing Expense Breakdown**

Starting January 1<sup>st</sup>, 2000, the northeast switched to multiple components pricing, which changed the format of the milk check and how farmers received payment for their milk. To examine the breakdown of the gross milk income and the marketing expenses, 98 farms filled out a detailed form for all the different sources of income for milk sales and the milk marketing expenses on an accrual basis. This information is reported in the following two tables. The tables are divided into six different areas, each representing a different area of income or expenses.

The first section looks at the value of the milk components on a per cwt. basis. The second area looks at the Producer Price Differential. The third area looks at the premiums a farm receives. Any premiums not specifically noted as quality or volume-related are included in market premiums. The fourth area looks at the expenses associated with marketing milk. A line item in this section is the expense associated with utilizing forward contracting or hedging programs to market milk, such as commissions or broker fees. The fifth area is income from forward contracting or hedging programs. The sixth area is the patronage dividends or refunds from the milk cooperatives. Equity purchased in the milk cooperative utilizing a monthly deduction from the milk check or a percent of the patronage dividend is treated as a capital purchase and is not a milk marketing expense. The cumulative total for these six areas is the net price received on farms. For participating farms, the net farm price can be found on page 13 of the DFBS report.

The table on page 9 reports the averages for these different areas. The table on page 10 contains the range for each of the individual lines of the report. This table is in farm business chart format with each item sorted independently and ranked by fifths. Numbers for the different areas will not add to the totals for that quintile or to the net price received because the highest farms for each item were averaged, not the same farms throughout the six areas. This table shows the range of income and expenses received by farms for all the different areas.

For your individual farm, compare your accrual numbers following this same format to look at how you compare to other farms in your region and to identify possible areas to generate additional revenue.

### New York State Farm Business Charts

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 190 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. **Each column of the chart is independent of the others.** The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

The cost control factors are ranked from low to high, but the lowest cost is not necessarily the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

Farm Business Charts for farms with freestall barns and 200 cows or less, 200-400 cows, and more than 400 cows; and farms with conventional barns with less than 60 cows and 60 cows and more are shown on pages 35-39.

**Financial Analysis Chart**

The farm financial analysis chart on page 32 is designed just like the Farm Business Chart and may be used to assess the financial health of the farm business. Most of the financial measures used in the chart are defined on pages 8, 11, 15 and 22 of this publication. References to DFBS output page numbers for participating dairy farmers are provided in the table headings.

\*\*\*Return on all farm capital (no deduction for interest paid) divided by total farm assets

### **Comparison by Type of Barn and Herd Size**

When analyzing a dairy farm business by comparing it to a group of farms, it is important that the group of farms have used as many of the same physical characteristics as possible as the farm being analyzed. To assist in this endeavor, dairy farms in the summary have been divided into those with freestall and those with conventional housing. Conventional housing includes stanchion and tiestall barns. Within each group, is a further classification by size of the dairy herd.

The table on page 34 includes the average values for the resulting five groups of dairy farms. The average size of farms in the five groups ranges from 45 cows on the small conventional farms to 993 cows on the largest freestall farms.

The largest freestall farms averaged the highest milk output per cow and per worker, the lowest total cost of production and investment per cow, as well as the highest returns to labor, management and capital.

Farm business charts have been computed for each of the five housing and herd size categories and are on pages 35-39. By comparing the farm's performance on the most appropriate business chart, a farm manager will be better able to evaluate his or her business performance.

### **Herd Size Comparisons**

A detailed comparison of profitability, financial situation and business analysis factors across herd sizes is contained on pages 48-60 of the 2011 State Summary\*. In most years, as herd size increases, the net farm income increases (page 48)\*; and that was generally the case for 2011. Net farm income without appreciation averaged \$25,530 per farm for the less than 60 cow farms and \$1,187,170 per farm for those with more than 900 cows. Return to all capital without appreciation generally increased as herd size increased. With herd sizes between 60 and 200 cows, many farms find it difficult to find a low cost combination of technology and labor to produce milk. Thus profits are lower for these herds than other herd sizes.

Assets, liabilities and financial measures are presented on pages 55-58\*. All herd size categories saw an increase in net worth during 2011. The largest herd size category experienced an increase in net worth of \$1,565,749. However, percent equity varied as herd size increased. The 200 to 399 and 600 to 899 herd size categories had the lowest percent equity at 68 percent; while the 100 to 199 herd size category averaged the highest percent equity at 76 percent.

Crop yields showed little relationship to herd size, but fertilizer and lime expenses, and machinery cost per tillable acre generally increased as herd size increased (pages 59-60)\*. The farms with more than 900 cows averaged more milk sold per cow than any other size category (page 60). With 25,689 pounds of milk sold per cow, farms in the largest herd size group averaged 9.3 percent more milk output per cow than the average of all herds in the summary with less than 900 cows. Farm capital per cow generally decreased as herd size increased. Milk sold per worker increased dramatically as herd size increased, ranging from 403,817 pounds at the lowest herd size category up to 1,144,223 pounds at the largest size category.

### IDENTIFY AND SET GOALS

If businesses are to be successful, they must have direction. Written goals help provide businesses with an identifiable direction over both the long and short term. Goal setting is as important on a dairy farm as it is in other businesses. Written goals are a tool which farm operators can use to ensure that the business continues to move in the desired direction. Goals should be SMART:

1. Goals should be Specific.
2. Goals should be Measurable.
3. Goals should be Achievable but challenging.
4. Goals should be Rewarding.
5. Goals should be Timed with a designated date by which the goal will be achieved.

Goal setting on a dairy farm should be a process for writing down and agreeing on goals that you have already given some thought to. It is also important to remember that once you write out your goals they are not cast in concrete. If a change takes place which has a major impact on the farm business, the goals should be reworked to accommodate that change. Refer to your goals as often as necessary to keep the farm business progressing.

It is important to identify both objectives (long-range) and goals (short-range) when looking at the future of your farm business.

A suggested format for writing out your goals is as follows:

- a. Begin with a mission statement which describes why the business exists based on the preferences and values of the owners.
- b. Identify 4-6 objectives.
- c. Identify SMART goals.

## GLOSSARY AND LOCATION OF COMMON TERMS

**Accounts Payable** - Open accounts or bills owed to feed and supply firms, cattle dealers, veterinarians and other providers of farm services and supplies.

**Accounts Receivable** - Outstanding receipts from items sold or sales proceeds not yet received, such as the payment for December milk sales received in January.

**Accrual Expenses** - (defined on page 5)

**Accrual Receipts** - (defined on page 6)

**Annual Cash Flow Statement** - (defined on page 13)

**Appreciation** - (defined on page 7)

**Asset Turnover Ratio** - The ratio of total farm income to total farm assets, calculated by dividing total accrual operating receipts plus appreciation by average total farm assets.

**Balance Sheet** - A "snapshot" of the business financial position at a given point in time, usually December 31. The balance sheet equates the value of assets to liabilities plus net worth.

**Capital Efficiency** - The amount of capital invested per production unit. Relatively high investments per worker with low to moderate investments per cow imply efficient use of capital.

**Cash From Nonfarm Capital Used in the Business** - Transfers of money from nonfarm savings or investments to the farm business where it is used to pay operating expenses, make debt payments and/or capital purchases.

**Cash Flow Coverage Ratio** - (defined on page 15)

**Cash Paid** - (defined on page 4)

**Cash Receipts** - (defined on page 6)

**Change in Accounts Payable** - (defined on page 5)

**Change in Accounts Receivable** - (defined on page 6)

**Change in Inventory** - (defined on page 4)

**Culling Rate** - Culling rate is calculated by dividing the number of animals that left the herd for culling purposes and that died, by the average number of milking and dry cows for the year.

**Current Portion** - (defined on page 9)

**Current Ratio** - Measures the extent to which current farm assets, if liquidated, would cover current farm liabilities. Calculated as current farm assets at end year divided by current farm liabilities at end year.

**Dairy (farm)** - A farm business where dairy farming is the primary enterprise, operating and managing this farm is a full-time occupation for one or more people and cropland is owned.

**Dairy Cash-Crop (farm)** - Operating and managing this farm is the full-time occupation of one or more people, cropland is owned but crop sales exceed 10 percent of accrual milk receipts.

**Death Rate** - The number of animals that died divided by the average number of milking and dry cows for the year.

**Debt Coverage Ratio** - (defined on page 15)

**Debt Per Cow** - Total end-of-year debt divided by end-of-year number of cows.

**Debt to Asset Ratios** - (defined on page 11)

**Depreciation Expense Ratio** – Machinery and building depreciation divided by total accrual receipts.

**Dry Matter** - The amount or proportion of dry material that remains after all water is removed. Commonly used to measure dry matter percent and tons of dry matter in feed.

**Equity Capital** - The farm operator/manager's owned capital or farm net worth.

**Expansion Livestock** - Purchased dairy cattle and other livestock that cause an increase in herd size from the beginning to the end of the year.

**Farm Debt Payments as Percent of Milk Sales** - Amount of milk income committed to debt repayment, calculated by dividing planned debt payments by total milk receipts. A reliable measure of repayment ability, see page 15.

**Farm Debt Payments Per Cow** - Planned or scheduled debt payments per cow represent the repayment plan scheduled at the beginning of the year divided by the average number of cows for the year. This measure of repayment ability is used in the Financial Analysis Chart.

**Financial Lease** - A long-term non-cancellable contract giving the lessee use of an asset in exchange for a series of lease payments. The term of a financial lease usually covers a major portion of the economic life of the asset. The lease is a substitute for purchase. The lessor retains ownership of the asset.

**Hired Labor Expense as % of Milk Sales** - The percentage of the gross milk receipts that is used for labor expense. Divide accrual hired labor expense by accrual milk sales.

**Hired Labor Expense per Hired Worker Equivalent** - The total cost to the farm per hired worker equivalent. Divide accrual hired labor expense by number of hired plus family paid worker equivalents.

**Income Statement** - A complete and accurate account of farm business receipts and expenses used to measure profitability over a period of time such as one year or one month.

**Interest Expense Ratio** – Accrual interest expense divided by total accrual receipts.

**Labor and Management Income** - (defined on page 8)

**Labor and Management Income Per Operator** - The return to the owner/manager's labor and management per full-time operator.

**Labor Efficiency** - Production capacity and output per worker.

**Leverage Ratio** - (defined on page 11)

**Liquidity** - Ability of business to generate cash to make debt payments or to convert assets to cash.

**Net Farm Income** - (defined on page 7)

**Net Farm Income from Operations Ratio** - (defined on page 9)

**Net Milk Receipts** – Accrual milk receipts less milk marketing expense.

**Net Worth** - The value of assets less liabilities equal net worth. It is the equity the owner has in owned assets.

**Operating Costs of Producing Milk** - (defined on page 21)

**Operating Expense Ratio** – Total accrual expenses less interest and machinery and building depreciation, divided by total accrual receipts.

**Opportunity Costs** - The cost or charge made for using a resource based on its value in its most likely alternative use. The opportunity cost of a farmer's labor and management is the value he/she would receive if employed in his/her most qualified alternative position.

**Other Livestock Expenses** - All other dairy herd and livestock expenses not included in more specific categories. Other livestock expenses include; bST, DHIC, registration fees and transfers.

**Part-Time Dairy (farm)** - Dairy farming is the primary enterprise, cropland is owned but operating and managing this farm is not a full-time occupation for one or more people.

**Personal Withdrawals and Family Expenditures Including Nonfarm Debt Payments** - All the money removed from the farm business for personal or nonfarm use including family living expenses, health and life insurance, income taxes, nonfarm debt payments, and investments.

**Profitability** - The return or net income the owner/manager receives for using one or more of his or her resources in the farm business. True "economic profit" is what remains after deducting all the costs including the opportunity costs of the owner/manager's labor, management, and equity capital.

**Purchased Inputs Cost of Producing Milk** - (defined on page 21)

**Renter** - Farm business owner/operator owns no tillable land and commonly rents all other farm real estate.

**Repayment Analysis** - An evaluation of the business' ability to make planned debt payments.

**Replacement Livestock** - Dairy cattle and other livestock purchased to replace those that were culled or sold from the herd during the year.

**Return on Equity Capital** - (defined on page 9)

**Return on Total Capital** - (defined on page 9)

**Sell Rate** – The number of animals that were sold for culling purposes divided by the average number of milking and dry cows for the year.

**Solvency** - The extent or ability of assets to cover or pay liabilities. Debt/asset and leverage ratios are common measures of solvency.

**Total Costs of Producing Milk** - (defined on page 21)

**Whole Farm Method** - A procedure used to calculate costs of producing milk on dairy farms without using enterprise cost accounts. All non-milk receipts are assigned a cost equal to their sale value and deducted from total farm expenses to determine the costs of producing milk.

**Working Capital** – A theoretical measure of the amount of funds available to purchase inputs and inventory items after the sale of current farm assets and payment of all current farm liabilities. Calculated as current farm assets at end year less current farm liabilities at end year.
