# COSTS BY HERD SIZE AND MILK PER COW, 1992 

Sherrill B. Wot, Ph.D.<br>MSU Department of Agricultural Economics

Dairy farmers are in business to make a profit. The core formula to calculate profits is:

$$
\begin{aligned}
& \text { + Income } \\
& \text { - Costs } \\
& =\text { Profit }
\end{aligned}
$$

We are faced with the reality of steady to decreasing milk prices and cull cattle prices. Income can be increased by keeping more cows, and by getting more milk sold per cow, at least up to the point of diminishing returns. Cost control can play a role. In my discussion I will look at the cost part of this formula.

A group of dairy Telfarmers in 1992 had an economic cost of production which averaged $\$ 11.05$ per cwt of milk. It was nice that the average price received for milk was $\$ 13.44$ per cwt. However, in the sample of 200 farms, the cost of production ranged from $\$ 5.20$ to $\$ 20.28$ per cwt.

There was little range in the price received. Individual managers with low costs made big profits. Those with high costs suffered big losses. Our goal is to help you plan how to be among those with lower than average costs of production while maintaining a profitable high output.

## COST VARIATION WITH SIZE

Throughout the years, college-based accounting systems have shown that larger farms have higher profits, all other things being equal. Lower unit costs have been a contributing factor. Table 1 shows the 1992 Telfarm results when the sample is split into 4 size groups and the profit indicator is management income per cow. This is an economic measure of profit where the operator and unpaid family labor are rewarded with $\$ 6.25$ per hour and the equity capital is rewarded with 6.0 percent interest. These are "paper," or noncash items. The 2 larger size groups had higher management income and lower cost per hundredweight (cwt.) of milk sold than did the 2 smaller size groups.

Table 1. MANAGEMENT INCOME AND NUMBER OF FARMS 200 Michigan Telfarmers, 1992

| Number of Cows | Number of <br> Farms | Management <br> Income | Production <br> Cost/Cwt. |
| :---: | :---: | :---: | :---: |
|  |  | $\$$ Per Cow | \$ Per Cwt. |
| Less than 65 | 54 | 95 | 12.80 |
| $65-99.9$ | 55 | 340 | 11.49 |
| $100-149.9$ | 45 | 584 | 10.38 |
| 150 or more | 46 | 515 | 10.89 |

Table 2 shows the livestock costs, summarized into major categories, resulting from averaging all the farms together. Note that feed costs, in this special ranking, are 52 percent of total costs. For this study, it is assumed all feeds are purchased from the crops enterprises on the farm. In other words, cost accounting has been done so as to identify only the costs directly associated with livestock. The cropping activities are left out of the analysis.

## Table 2. AVERAGE COSTS PER FARM LIVESTOCK ONLY 200 Dairy Telfarmers, 1992

| Category | Total Farm | Per Cow | Percent of <br> Total |
| :--- | :---: | :---: | :---: |
| Dollars |  |  |  |
|  |  |  |  |
| Feed Fed | 143,957 |  | $\%$ |
| Livestock Services | 52,574 | 1,267 | 52 |
| Labor | 39,923 | 463 | 19 |
| Power \& Equipment | 15,590 | 351 | 15 |
| Buildings, Improvements | 11,932 | 137 | 6 |
| Other Costs | 8,691 | 105 | 4 |
| Land Charges | 1,782 | 76 | 3 |

Table 3 shows there is no marked trend in feed cost per cow and milk sold per cow as size increases. The farms with 100 to 150 cows sold the most milk per cow. The 2 smaller herd groups sold less milk per cow.

Table 3. FEED COST AND MILK SOLD PER COW 200 Michigan Telfarmers, 1992

| Number of Cows | Feed Cost | Milk Sold Per <br> Cow |
| :---: | :---: | :---: |
|  | $\$$ | lbs. |
| Less than 65 | 1,296 | 16,762 |
| $65-99.9$ | 1,238 | 17,736 |
| $100-149.9$ | 1,280 | 19,529 |
| 150 or more | 1,265 | 19,159 |

Table 4 shows the details of the total feed costs in Table 3. Notice bigger farms have lower hay costs and higher other feed costs. Other feed is all purchased. It includes protein, salt, minerals and grains.

Table 4. BREAKDOWN OF FEED COSTS IN TABLE 3 200 Michigan Telfarmers, 1992

| Number of Cows | Corn, Oats, <br> \& Barley | Corn <br> Silage | Hay and <br> Pasture | Other <br> Feeds |
| :---: | :---: | :---: | :---: | :---: |
|  |  | \$Per Cow |  | \$Per Cwt. |
| Less than 65 | 286 | 152 | 437 | 421 |
| $65-99.9$ | 298 | 158 | 358 | 424 |
| $100-149.9$ | 294 | 155 | 322 | 509 |
| 150 or more | 282 | 153 | 241 | 589 |

Table 5 shows operator labor per cow is quite high on the smaller farms, while hired labor becomes a more important factor on the larger farms. The message is that on smaller dairies how well you manage your own time is a big factor in labor management. Larger farms have likely invested in labor saving equipment. Also, more management attention is needed to supervise the hired labor force if labor costs are to be kept in check and efficiency maintained.

## Table 5. LABOR COST PER COW BY SOURCE

 200 Michigan Telfarmers, 1992| Number of Cows | Operator | Unpaid <br> Family | Hired | Total |
| :--- | :---: | :---: | :---: | :---: |
|  | \$ Per Cow |  |  |  |
| Less than 65 | 206 | 82 | 102 |  |
| $65-99.9$ | 116 | 81 | 149 | 390 |
| $100-149.9$ | 76 | 73 | 196 | 346 |
| 150 or more | 43 | 49 | 257 | 345 |

Table 6 shows the machinery investments assigned to crops or dairy production. The trend shows that larger farms have larger machinery investments per acre and per cow. In 1992, the annual costs were also higher on the larger farms.

Table 6. MACHINERY: CROPS VERSUS DAIRY
200 Michigan Telfarmers, 1992

| Number of Cows | Crops Items |  | Dairy Items |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Invested | Costs | Invested | Costs |  |  |  |  |  |  |  |
| \$ Per Acre |  |  |  |  |  |  |  |  |  | \$ Per Cow |  |
|  |  |  | 152 |  |  |  |  |  |  |  |  |
| Less than 65 | 85 |  | 65 | 157 | 126 |  |  |  |  |  |  |
| $65-99.9$ | 110 |  | 84 | 169 | 136 |  |  |  |  |  |  |
| $100-149.9$ | 126 |  | 89 | 104 | 202 |  |  |  |  |  |  |
| 150 or more | 152 |  | 140 |  |  |  |  |  |  |  |  |

Table 7 shows 2 cost items that are higher per cow on the 2 larger size farm groups. Health care is made up of veterinary, medicine and drug costs. Bedding makes up the most of the column headed "bedding, DHi and registrations."

Table 7. VETERINARY AND BEDDING COSTS PER COW 200 Michigan Telfarmers, 1992

| Number of Cows | Health <br> Care | Bedding, DHI <br> \& Registrations |
| :---: | :---: | :---: |
|  |  | \$ Per Cow |
| Less than 65 | 57.83 |  |
| $65-99.9$ | 54.99 | 49.86 |
| $100-149.9$ | 66.59 | 34.38 |
| 150 or more | 88.91 | 49.59 |

Few costs per cow in 1992 strongly trended downward as size groupings increased. Table 8 shows insurance costs did go down. This includes insurances other than vehicle insurance.

Table 8. INSURANCE COSTS PER COW BY FARM SIZE 200 Michigan Telfarmers, 1992

| Number of Cows | Insurance |
| :---: | :---: |
|  | Per Cow |
|  | $\$$ |
| Less than 65 | 24.83 |
| $65-99.9$ | 23.03 |
| $100-149.9$ | 20.83 |
| 150 or more | 18.21 |

## SIZE VERSUS PRODUCTION LEVEL

Up to this point, I have shown how per unit dairy farm costs vary by size of farm. Rather than get bigger to get more profit, some would rather get better. Better usually means more milk sold per cow. Using this measure, the next few tables show how better herds control their various costs.

## COST BY MILK SOLD PER COW

Management income per cow tends to go up as pounds of milk sold per cow increases. The 18 farms with under 14,000 pounds of milk per cow lost $\$$-2 per cow. Those 29 farms with over 22,000 pounds of milk made $\$ 740$ per cow and earned $33 \%$ on their investment. Table 9 shows both these measures of economic profit.

Table 9. MANAGEMENT INCOME AND RETURN ON INVESTMENT, PER COW 200 Michigan Telfarmers, 1992

|  | 200 Michigan Telfarmers, 1992 |  |
| :---: | :---: | :---: |
| Pounds of Milk | Management |  |
| Sold Per Cow | Income | Return on |
|  | Per Cow | $\%$ |
| Owned Capital |  |  |

Although the trend was not perfectly smooth, the farms in Table 10 with higher production per cow also tended to be larger, and reported a higher percentage of net worth. It appears that high profit is associated with both more cows and more milk per cow.

Table 10. COWS AND NET WORTH POSITION, TOTAL FARM 200 Michigan Telfarmers, 1992

| Pounds of Milk <br> Sold Per Cow | Number <br> of Farms | Number <br> of Cows | Net Worth as <br> \% of Assets |
| :---: | :---: | :---: | :---: |
| Under 14,000 | 18 | 72 | 67 |
| $14,000-15,000$ | 21 | 96 | 55 |
| $15,000-16,000$ | 17 | 76 | 74 |
| $16,000-17,000$ | 20 | 136 | 74 |
| $17,000-18,000$ | 21 | 93 | 75 |
| $18,000-19,000$ | 27 | 121 | 72 |
| $19,000-20,000$ | 19 | 130 | 74 |
| $20,000-22,000$ | 28 | 134 | 75 |
| 22,000 Or More | 29 | 136 | 86 |

Cost control does not always mean cost minimization. Table 11 shows that as milk per cow went up, feed costs per cow tended to go up. The return above feed cost also went up.

Table 11. FEED COSTS AND RETURN ABOVE FEED COSTS, PER COW 200 Michigan Telfarmers, 1992

| Pounds of Milk | Feed <br> Disappearance | Return Above <br> Sold Per Cow |
| :---: | :---: | :---: |
|  |  | Feed Costs |
| Under 14,000 | 1,040 | \$s Per Cow |
| $14,000-15,000$ | 983 | 936 |
| $15,000-16,000$ | 1,177 | 1,239 |
| $16,000-17,000$ | 1,202 | 1,097 |
| $17,000-18,000$ | 1,267 | 1,340 |
| $18,000-19,000$ | 1,327 | 1,395 |
| $19,000-20,000$ | 1,295 | 1,493 |
| $20,000-22,000$ | 1,344 | 1,751 |
| 22,000 Or More | 1,420 | 1,885 |

Unlike variation in size, the labor cost per cow did not go down very much as milk per cow increased. The labor was highest for the highest milk production group, but did not correlate well with production changes.

Livestock services did go up with production, as shown in Table 12. Marketing and trucking would be expected to go up, as the charges for these items are directly related to the quantity sold. However, larger breeding and health related costs are associated with higher production levels. Again, cost control is better than cost elimination. The other items which were included in Total Livestock Services were not shown in Table 12 because they didn't change with production level.

Table 12. SELECTED LIVESTOCK COSTS PER COW 200 Michigan Telfarmers, 1992

| Pounds of Milk <br> Sold Per Cow | Semen <br> Breeding | Health <br> Care | Marketing <br> Trucking | Total Livestock <br> Services |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | \$s Per Cow |  |

The remaining cost items you might think about were not closely-related to production per cow. The substantially higher net income levels earned by dairy farmers seemed more related to knowing where to spend their operating funds than in trying to minimize all costs. It appears that to get more milk per cow, one
needs to judiciously spend more on feed, semen, health care, and marketing services while holding other costs about average.

Appendix Tables A and B contain a full breakdown of the livestock cost categories summarized in the Telfarm system. Those costs attributed to crop production are not in Tables A and B.

APPENDIX TABLE A.
Telfarm Averages, 200 Farms, 1992, By Size

|  | Less than 65 Cows | $\begin{gathered} 65-100 \\ \text { Cows } \\ \hline \end{gathered}$ | $\begin{gathered} 100-150 \\ \text { Cows } \\ \hline \end{gathered}$ | $\begin{gathered} 150 \text { or more } \\ \text { Cows } \\ \hline \end{gathered}$ |
