In 2014, the total noncapital living expenses of 1,350 farm families enrolled in the Illinois Farm Business Farm Management Association (FBFM) averaged \$81,711--or \$6,809 a month for each family (Figure 1). This average was 1.2 percent higher than in 2013. Another \$7,225 was used to buy capital items such as the personal share of the family automobile, furniture, and household equipment. Thus, the grand total for living expenses averaged \$88,936 for 2014 compared with \$89,130 for 2013, or a \$194 decrease per family.

Income and social security tax payments decreased about 3.8 percent in 2014 compared to the year before. The amount of income taxes paid in 2014 averaged \$38,801 compared to \$40,328 in 2013. Net nonfarm income continued to increase, averaging \$39,676 in 2014. Net nonfarm income has increased \$11,866, or 43 percent in the last ten years.

In Figure 2, total family living expenses (expendables plus capital) are divided by tillable operator acres for 2005 to 2014. In 2005, all of the family living costs per acre averaged about \$84 per acre. This increased to \$116 per acres in 2014. The 10-year average is \$102 of total family living expense per acre. If we compare this to the 10-year average of net farm income per acre of \$204, then 50% of the net farm income per acre is family living expense. If we look at the average year over year increase for the last ten years for family living per acre, the annual increase was 3.4% per year. The five-year annual increase per year would average 3.1%. Therefore, as you work on your crop budgets, keep in mind that a 55 cent price change on 200 bushels per acre corn is about equal to the average total family living expense per acre.

When you take total family living expenses minus net nonfarm income this equals \$64 per acre in 2014 and was \$62 per acre for the five-year average. This would be the part of family living that is covered by the farm income. In addition, there is another \$51 per acre in social security and income taxes to be covered by the farm in 2014. The five-year average for these taxes was \$39 per acre. A 30 cent price change on 200 bushels of corn per acre is equal to the 2014 family living cost that would be covered by the farm.

The author would like to acknowledge that data used in this study comes from the local Farm Business Farm Management (FBFM) Associations across the State of Illinois. Without their cooperation, information as comprehensive and accurate as this would not be available for educational purposes. FBFM, which consists of 5,600 plus farmers and 60 professional field staff, is a not-for-profit organization available to all farm operators in Illinois. FBFM field staff provide on-farm counsel with computerized recordkeeping, farm financial management, business entity planning and income tax management. For more information, please contact the State FBFM Office located at the University of Illinois Department of Agricultural and Consumer Economics at 217-333-5511 or visit the FBFM website at www.fbfm.org.
