## **Abstract**

This report evaluates the U.S. and world sugar markets for 1997-2007 by using the World Sugar Policy Simulation Model. This analysis is based on assumptions about general economic conditions, agricultural policies, weather conditions, and technological changes.

Both the U.S. and world sugar economies are predicted to be strong for the next ten years. World demand for sugar is expected to grow faster than world supply, gradually increasing sugar prices. World trade volumes of sugar are expected to expand.

**Key words:** Sugar, production, exports, consumption, ending stocks.

## **Highlights**

Total world sugar trade is projected to increase by 19.8% between 1997 and 2007 from 23.6 million metric tons to 28.3 million metric tons. World sugar prices also are projected to increase about 33.8% from 7.76 cents/lbs in 1997 to 10.38 cents/lbs in 2007.

U.S. sugar production is predicted to increase 4.5% from 1997 to 2007, and imports to increase 21.9%. This is mainly because of increased U.S. sugar consumption which is predicted to increase 10.8%. Ending stocks also are predicted to increase 16.3% in the United States.

Canada's production is predicted to increase 6.2% from 1997 to 2007. Canada's imports are expected to decrease 3.6%. Consumption is predicted to remain constant, while ending stocks are predicted to increase 5.9%.

Mexico's production is expected to increase 14.9% from 1997 to 2007 and imports to increase 74.5%. This is mainly because of increased consumption, which is predicted to increase 28.4%. Ending stocks are predicted to increase 30.5%.

European Union's exports are predicted to decrease 3.1%. Production and consumption are predicted to remain constant.

Production in India is predicted to increase 25.1% and consumption is predicted to increase 27.3%. As a result, India's exports are predicted to decrease 52.7%.

Exporting countries, such as Brazil, Thailand, Australia, and Cuba are predicted to increase their production and exports during the forecasting period.

Most importing countries, such as the former Soviet Union, China, Japan, Korea, and Indonesia are predicted to increase their imports during the forecasting period.

# **1998 OUTLOOK OF THE U.S. AND WORLD SUGAR MARKETS**

Won W. Koo and Richard D. Taylor\*

## **INTRODUCTION**

This report evaluated the United States and world sugar industries for 1998-2007 by using the World Sugar Policy Simulation Model. The model was developed by Benirschka and Koo and is operational at North Dakota State University. The outlook projection for world sugar trade assumes that farm and trade policies adopted by sugar exporting and importing countries remain unchanged. Assumptions regarding macroeconomic variables, such as GDP growth rates, interest rates, inflation rates, exchange rates, and consumer price indices in the United States and other countries, are based on forecasts prepared by the WEFA Group and Project LINK. Average weather conditions and historical rates of technological change are also assumed to prevail during the projection period.

Sugar is produced by two different crops: sugar cane, which is grown in tropical and subtropical climate zones and sugar beets, which is grown in the temperate climate zones. Both crops are processed near growing regions because of high costs of shipping associated with the raw commodity. Sugar cane is processed into raw sugar at local mills and shipped to refineries for processing into refined sugar. Sugar beet is processed into refined sugar at local refineries.

The model contains 7 exporting countries (Australia, Brazil, Cuba, the European Union (EU), India, South Africa, and Thailand) and 11 importing countries and regions (Algeria, Canada, China, Egypt, Indonesia, Japan, Korea, the Former Soviet Union, Mexico, the United States, and Rest of the World region). The model simulates production, consumption, stocks, exports, and trade flows for sugar over a 10-year period. The model is solved for a set of equilibrium sugar prices in which demand for sugar equals supply. The model is linked to the Food Agricultural Policy Research Institute (FAPRI) model and uses the FAPRI model's predicted prices of all agricultural commodities, except sugar.

## **OUTLOOK FOR THE WORLD SUGAR INDUSTRY**

Total world sugar trade is projected to increase by 19.8% from 23.6 million metric tons to 28.3 million metric tons. Except for the EU, India, and South Africa, trade of sugar in most countries increases for 1997-2007. The EU's exports decrease mainly because reductions in EU subsidies under the World Trade Organization (WTO) will make EU sugar production less competitive. India and South Africa are expected to decrease their exports of sugar mainly because of increases in domestic consumption. Sugar consumption in India and South Africa is expected to increase faster than production.

Figure 1 shows the Caribbean price of sugar. World sugar prices are projected to increase about 33.8%, from 7.76 cents/lbs in 1997 to 10.38 cents/lbs in 2007. Increasing demand for sugar will raise the world price of sugar.

---

\*Professor and Research Associate in the Department of Agricultural Economics at North Dakota State University, Fargo.

Figure 1. World Sugar Price, Caribbean

## United States

Table 1 shows production, consumption, imports, and ending stocks for the United States. U.S. sugar production is predicted to increase 4.5%, from 6.8 million metric tons in 1997 to 7.1 million metric tons in 2007, and imports to increase 21.9% (Figure 2). The import price for U.S. sugar is projected to decrease from 20.19 cents/lbs in 1997 to 16.81 cents/lbs in 2007. The main reason for the decrease is a decrease in the implicit tariff rate from 11.94 cents/lbs in 1997 to 4.79 cents/lbs in 2007. The United States will continue to import over 23% of the sugar it consumes. U.S. sugar consumption is predicted to increase 10.8%, from 8.7 million metric tons in 1997 to 9.6 million metric tons in 2007, while ending stocks are predicted to increase 16.3% (Figure 3).

Table 1. U.S. Sugar production, consumption, exports, and carry-over stocks, various years

	average (1992-1996)	1997	2007	% change (1997-2007)
	-----thousand metric tons-----			
<u>United States</u>				
Production	6,734	6,821	7,124	4.45
Net Imports	1,611	2,035	2,481	21.88
Consumption	8,337	8,662	9,596	10.79
Carry-over Stocks	1,202	1,556	1,687	16.32

## Exporters

Figure 4 shows predicted exports for 1997 to 2007. The European Union's exports are predicted to decrease 3.0% from 3.8 million metric tons in 1997 to 3.7 million metric tons in 2007 (Table 2), mainly because EU sugar production will become less competitive with the reduced subsidies under the WTO. Production and consumption are predicted to remain constant at 16.8 million and 13.1 million metric tons, respectively.

India's production is predicted to increase 25.1% from 16.8 million metric tons in 1997 to 20.9 million metric tons in 2007. However, its exports are predicted to decrease 52.7% from 2.8 million metric tons in 1997 to 1.3 million metric tons in 2007 mainly because consumption is expected to increase 27.3% from 15.4 million metric tons in 1997 to 19.6 million metric tons in 2007.

Brazil's production is predicted to increase 15.1% from 12.0 million metric tons in 1997 to 13.8 million metric tons in 2007. Brazil's exports are predicted to increase 32.5% from 3.2 million metric tons in 1997 to 4.2 million metric tons in 2007 (Table 2), due mainly to increased consumption. Consumption is predicted to increase 10.1% from 8.7 million metric tons in 1997 to 9.6 million metric tons in 2007.

Consumption	1,389	1,402	1,796	28.10
Carry-over Stocks	346	314	430	36.94

Thailand's exports are predicted to increase 31.7% from 4.3 million metric tons in 1997 to 5.7 million metric tons in 2007 (Table 2) due mainly to increased production. Production is predicted to increase 34.0% from 5.7 million metric tons in 1997 to 7.7 million metric tons in 2007. Consumption also is predicted to increase 32.6% from 1.4 million metric tons in 1997 to 1.9 million metric tons in 2007, while ending stocks are predicted to increase 14%.

Australia's exports are predicted to increase 17.0% from 3.8 million metric tons in 1997 to 4.5 million metric tons in 2007 (Table 2), due mainly to increased production. Production is predicted to increase 15.5% from 4.8 million metric tons in 1997 to 5.6 million metric tons in 2007. Consumption also is expected to increase 13.7% from 1.0 million metric tons in 1997 to 1.1 million metric tons in 2007.

Cuba's exports are predicted to increase 48.4% from 4.0 million metric tons in 1997 to 5.9 million metric tons in 2007 (Table 2). It is predicted that Cuba will increase its sugar production from 4.8 million metric tons in 1997 to 6.8 million metric tons in 2007. Cuba's consumption is predicted to increase 16.9%, from 0.8 million metric ton in 1997 to 0.9 million metric tons in 2007.

### **Importers**

Figures 5 and 6 show the sugar imports for the major importers of the world. Canada's production is predicted to increase 6.2% from 0.16 million metric tons in 1997 to 0.17 million metric tons in 2007. As a result, Canada's imports are predicted to decrease 3.6% from 1.2 million metric tons in 1997 to 1.1 million metric tons in 2007. Consumption is predicted to remain constant at 1.3 million metric tons, and ending stocks are predicted to increase 6.0%.

Mexico's production is predicted to increase 14.9% from 4.7 million metric tons in 1997 to 5.4 million metric tons in 2007. However, Mexico's imports are predicted to increase 74.5% from 0.2 million metric tons in 1997 to 0.4 million metric tons in 2007, due mainly to increased consumption. Consumption also is predicted to increase 28.4% from 4.7 million metric tons in 1997 to 6.0 million tons in 2007. Ending stocks are predicted to increase 30.5%.

The Former Soviet Union's production is predicted to increase 11.1% from 6.0 million metric tons in 1997 to 6.8 million metric tons in 2007 and consumption also is predicted to increase 27.2% from 9.6 million metric tons in 1997 to 12.3 million metric tons in 2007. Its imports are predicted to increase 58.8% from 3.5 million metric tons in 1997 to 5.6 million metric tons in 2007 (Table 3), due mainly to increased consumption.

China is expected to increase its imports 102.8% from 0.3 million metric tons in 1997 to 2.7 million metric tons in 2007 (Table 3) due mainly to much faster increase in consumption compared to production. China's production is predicted to increase 27.4% from 7.3 million metric tons in 1997 to 9.3 million metric tons in 2007, while consumption is predicted to increase 38.7% from 8.6 million metric tons in 1997 to 11.9 million metric tons in 2007.

Figure 5. World Sugar Importers, by Country

Figure 6. World Sugar Importers, by Country

Japan's imports are predicted to increase 10.8% from 1.8 million metric tons in 1997 to 2.0 million metric tons in 2007 due mainly to increased consumption. Consumption is predicted to increase 3.5% from 2.7 million metric tons in 1997 to 2.8 million metric tons in 2007 (Table 3).

In Korea, consumption is predicted to increase 37.1% from 1.1 million metric tons in 1997 to 1.5 million metric tons in 2007. As a result, Korea's imports are predicted to increase 36.4% from 1.1 million metric tons in 1997 to 1.5 million metric tons in 2007.

In Algeria, consumption is predicted to increase 44.2% from 1.0 million metric tons in 1997 to 1.4 million metric tons in 2007. This increase in consumption resulted in increased imports from 1.0 million metric tons in 1997 to 1.4 million metric tons in 2007.

Egypt's imports are predicted to increase 51.8% from 0.6 million metric tons in 1997 to 0.9 million metric tons in 2007 due mainly to increased consumption. Consumption is predicted to increase 19.5% from 1.9 million metric tons in 1997 to 2.2 million metric tons in 2007.

Indonesia's imports are predicted to increase 97.7% from 0.3 million metric tons in 1997 to 0.7 million metric tons in 2007 due mainly to increased consumption. Consumption is predicted to increase 33.7% from 2.8 million metric tons in 1997 to 3.7 million metric tons in 2007 (Table 3).

### CONCLUDING REMARKS

This report evaluates the U.S. and world sugar markets for 1997-2007 by using the World Sugar Policy Simulation Model. The baseline projections are based on a series of assumptions about general economic conditions, agricultural policies, the weather, and technological change.

Total world sugar trade is projected to increase by 19.8% from 23.6 million metric tons in 1997 to 28.3 million metric tons in 2007. The price of Caribbean sugar also is expected to increase about 34%, because world consumption of sugar will increase faster than world production.

U.S. sugar production, imports, consumption, and ending stocks are predicted to increase for the forecasting period. The import price of U.S. sugar is projected to decrease from 20.19 cents/lbs in 1997 to 16.81 cents/lbs in 2007. The main reason for the drop is a decrease in the implicit tariff rate from 11.94 cents/lbs in 1997 to 4.79 cents/lbs in 2007.

Canada's production and ending stocks are predicted to increase for the forecasting period. Canada's imports are predicted to decrease, while consumption is predicted to remain constant. Mexico's production, consumption, imports, and ending stocks are predicted to increase for the forecasting period.

Exports are predicted to increase for Brazil, Thailand, Australia, and Cuba, while exports are predicted to decrease for the EU and India. Production in the EU is predicted to remain constant and consumption in India will increase faster than production over the forecasting period.

It is predicted that imports for all importing countries will increase over the forecasting period. China's imports are predicted to increase 102.8%, while Japan's imports are predicted to increase only 10.8%. Korea's imports are predicted to increase 36.4% and Algeria's imports are predicted to increase 44.2%. Imports by other countries, such as the former Soviet Union, Egypt and Indonesia are predicted to increase over 50% for the forecasting period.
