ABSTRACT

This report evaluates the U.S. and world wheat markets for the 1999-2009 period by using the Global Wheat Policy Simulation Model. This analysis is based on a series of assumptions about general economic conditions, agricultural policies, weather conditions, and technological change.

Both the U.S. and world wheat economies are predicted to be improving for the next ten years. World demands for both common and durum wheat are expected to grow faster than world production of the two wheat classes, resulting in gradual increases in prices of the wheats, which are predicted to increase 36% for durum wheat and 23% for common wheat for the 1999-2009 period. However, the prices are expected to recover slowly for the next 2-3 years. World trade volumes of both classes of wheat are expected to expand, but trade volume of durum wheat may grow faster than common wheat.

Key words: Common Wheat, Durum Wheat, Production, Exports, Consumption, Ending Stocks

HIGHLIGHTS

Total world wheat trade is projected to increase by 13.9% from 85.0 million metric tons in 1999 to 96.8 million metric tons in 2009. Prices for both durum and common wheat are expected to increase about 36% and 23%, respectively, for the 1999-2009 period. However the prices are expected to recover slowly for the next 2-3 years.

Production of all wheat classes in the United States is predicted to increase for the 1999-2009 period. The largest increase in production occurs for U.S. white wheat, followed by HRS wheat. U.S. consumption of durum wheat is expected to grow faster than consumption of other wheats for the 1999-2009 period, mainly because of the increasing popularity of pasta products in the United States. Exports of all wheat classes except durum wheat are predicted to be strong for the 1999-2009 period. Durum exports are predicted to be sluggish.

Production of both Canadian western red spring (CWRS) and western amber durum (CWAD) wheat is predicted to increase for the 1999-2009 period. However, CWAD wheat production will grow faster than CWRS wheat production.

Domestic consumption of CWRS and CWAD wheat is predicted to increase for the 1999-2009 period. CWAD wheat exports are projected to increase faster than CWRS wheat exports.

Common wheat production in the European Union (E.U.) is predicted to increase 0.4% from 1999 to 2009, while durum wheat production is expected to increase 4.7%. Exports of both wheat classes are predicted to decrease.

Australia's wheat production is predicted to grow 6.2% over the 1999-2009 period. Domestic wheat consumption is expected to increase 7.4% from 5.1 million metric tons in 1999 to 5.5 million metric tons in 2009. Wheat exports also are expected to increase from 18.0 million metric tons in 1999 to 19.0 million metric tons in 2009.

Argentine wheat production is projected to increase 8.6% from 14.0 million metric tons in 1999 to 15.2 million metric tons in 2009. Domestic wheat consumption is expected to increase 19.8% from 4.5 million metric tons to 5.4 million metric tons for the period. Wheat exports are expected to increase from 9.6 million metric tons in 1999 to 9.8 million metric tons in 2009.

Most importing countries are predicted to increase their imports for both common and durum wheat. Among those countries, import demand for common wheat from China and Tunisia will grow faster than from other countries. Import demand for durum wheat from Algeria is predicted to grow faster than common wheat.

2000 OUTLOOK OF THE U.S. AND WORLD WHEAT INDUSTRIES, 1999-2009

Won W. Koo and Richard D. Taylor*

INTRODUCTION

This report evaluates the U.S. and world wheat industries for the 1999-2009 period by using the Global Wheat Policy Simulation Model developed by Benirschka and Koo. The outlook projection is based on an assumption that current farm and trade policies adopted by wheat exporting and importing countries are unchanged. Assumptions associated with macroeconomic variables, such as GDP growth rates, interest rates, inflation rates, exchange rates, and consumer price indices in the United States and other countries, are based on forecasts prepared by the WEFA Group and Project LINK. Average weather conditions and historical rates of technological change are also assumed to prevail during the projection period.

Wheat is a differentiated product. Substitution among wheat classes is imperfect, and consumer preferences differ among countries, suggesting that wheat characteristics are an important determinant of trade flows. The Global Wheat Policy Simulation Model is a partial equilibrium model that distinguishes wheat into common and durum wheat. U.S. common wheat is further divided into four classes; hard red winter (HRW), hard red spring (HRS), soft red winter (SRW), and white wheat.

The model contains 5 exporting countries [Argentina, Australia, Canada, the United States, and the European Union (E.U.)] and 13 importing countries and regions (Algeria, Brazil, China, Egypt, the Former Soviet Union (FSU), Japan, Mexico, Morocco, South Korea, Taiwan, Tunisia, Venezuela, and a Rest of the World region). The model simulates production, consumption, stocks, and exports or imports for wheat classes over a 10-year period. The model is solved for a set of equilibrium wheat prices in which demand for each wheat class equals supply for every year. The model is linked to the Food Agricultural Policy Research Institute (FAPRI) model and uses the predicted prices of all agricultural commodities, except wheat, from the model. The model used 1999 as the base year of the simulation.

Wheat is produced widely across the world. The total world wheat production has increased, from 531 million tons in 1986/87 to 585 million tons in 1999/00. China was the largest producer of wheat in 1999 (115 million tons), followed by the E.U. (96 million tons) and the United States (63 million tons). Other major wheat producing countries are the former Soviet Union (FSU), Canada, Australia, Turkey, India, and Argentina. These nine countries produce about 74% of wheat produced in the world. Because of the concentration of wheat production in a few countries, a large volume of wheat is traded in the world market. The total quantity of wheat traded in the world market was 123 million tons in 1999, which is about 21% of wheat produced in that year. Major exporting countries are the United States, Canada, the E.U., Australia, and Argentina.

*Professor and director, and research associate, respectively, in the Northern Plains Trade Research Center, North Dakota State University, Fargo.

The world wheat market has changed dramatically in the past decade. Farm support policies in exporting and importing countries have encouraged production, resulting in large stock buildups. Countries used quotas, variable levies, tariffs, and other forms of import restrictions to protect domestic producers. As world trade decreased during the early 1980s due to a depressed world economy, major exporting countries expanded the use of export subsidies or export promotion programs to maintain their grain market share.

The Uruguay Round of GATT negotiations, which became effective in 1995, has affected trade flows of wheat from exporting countries to importing countries. In addition, recent financial crises in several Asian countries, including South Korea, Thailand, Indonesia, and Taiwan, also have affected the world wheat market. Import demand for wheat from those countries has been reduced substantially, resulting in depressed wheat prices in the world market. The average export price of wheat at the Gulf ports decreased from \$5.02 per bushel in 1996/97 to \$ 3.38 per bushel in 1999/00.

WORLD WHEAT INDUSTRY

World wheat trade is dominated by a few exporting countries: the United States, Canada, Argentina, Australia, and the E.U. These countries have handled over 80% of wheat traded in the world market. While competition among exporting countries is strong, the world wheat market is not perfectly competitive. Australia and Canada use wheat boards to market their grain, while the United States and the E.U. rely on export subsidies to increase their market share. In addition, all major wheat exporters use credit guarantees and loan term preferential trade agreements to promote their exports.

Wheat Classes

Most wheat varieties grown today belong to the broad category of common or bread wheat, which accounts for approximately 95% of world wheat production. The remaining 5% of world wheat production is durum wheat used to produce pasta and couscous. Common wheat is further divided into hard and soft wheat. Wheat varieties are highly differentiated in terms of their agronomic and end-use attributes. Based on criteria, such as kernel hardness, color, growth habit, and protein content, wheat is divided into several classes. Color and hardness refer to physical properties of the wheat kernel. Based on the color of the outer layer of the kernel, common wheat varieties are described as white, amber, red, or dark, while the hardness of the kernel is used to characterize them as hard or soft.

Growth habitat is an important agronomic feature of wheat varieties. Winter wheat is planted in late summer or fall and requires a period of cold winter temperatures for heading to occur. After using fall moisture for germination, the plants remain in a vegetative phase or dormancy during the winter and resume growth in early spring. In contrast to winter wheat, spring wheat changes from vegetative growth to reproductive growth without exposure to cold temperatures. In temperate climates, spring wheat is sown in spring. Since yields for winter wheat tend to be higher than for spring wheat, spring wheat is produced primarily in regions

where winter wheat production is infeasible, where frozen soil kills the wheat plants, or where winters are too warm. Countries with mild winters, such as Argentina, Australia, and Brazil, produce spring wheat but plant in the fall rather than in the spring.

Wheat Production

Because of differences in soil types and climates, wheat produced in one country generally differs from that produced in other countries. The United States produces hard, soft, and durum wheats. Hard wheat produced in the United States is further divided into hard red winter (HRW) and hard red spring (HRS) wheat and soft wheat into soft red winter (SRW) and white wheat. SRW wheat is produced in the Corn Belt and Southern states. HRS and durum wheat are grown in the Northern Plains, mainly North Dakota, which produces about 80% of durum wheat and 60% of HRS wheat produced in the United States. HRW wheat is grown primarily in the Central Plains, particularly Kansas and Oklahoma. White wheat, a type of soft wheat, is grown in the Pacific Northwest, Michigan, and New York. Average U.S. wheat production for the 1995-1999 period was 64.3 million tons with 26.8 million tons in HRW, 13.8 million tons in HRS, 12.2 million tons in SRW, 8.5 million tons in white wheat, and 3.0 million tons in durum wheat (Table 1).

The majority of Canadian wheat is produced in Saskatchewan, southwestern Manitoba, and southeastern Alberta. Canada produces primarily a hard red spring wheat (Canadian Western Red Spring) and durum wheat. Average Canadian wheat production for the 1995-1999 period included 22.7 million tons of HRS and 3.9 million tons of durum wheat (Table 1).

The E.U. produced an annual average of 85.7 million tons of a soft wheat and 8.2 million tons of durum wheat during the 1995-1999 period. France accounted for 40% of soft wheat production in the E.U. in 1995. Germany and the United Kingdom are also major producers. The majority of durum is produced in Italy, Greece, and France. Italy accounted for nearly 60% of E.U. durum production in 1995, followed by Greece (22%) and France (13%).

Australia primarily produces a winter wheat which is similar to HRW wheat in terms of quality and characteristics. Australian average wheat production amounted to 20.7 million tons for the 1995-1999 period. Wheat production is concentrated in the eastern Australian states of New South Wales and Victoria.

Argentina produces a wheat with characteristics of both soft and hard wheat. Argentina's average wheat production amounted to 13.0 million tons for the 1995-1999 period.

Wheat Consumption and Imports

Different wheat classes have their preferred uses. Hard wheat flour has excellent bread baking properties; soft wheat flour is well-suited for cakes, cookies, and Asian noodles; and durum wheat is used for pasta products and couscous. However, since different types of wheat can be blended to produce flours with certain characteristics, some substitution among wheat classes is possible in flour milling.

Although wheat is used primarily for human consumption, it is also an excellent feed grain for poultry and livestock. Feed use of wheat tends to be highly variable and depends on the quality of wheat crop and on the price relationship between wheat and other feed grains. Generally, only lower quality wheat is used for feed and differences among wheat classes are not important for feeding purposes. Wheat is a differentiated product only for human consumption.

Major importing countries or regions include Algeria, Brazil, China, Egypt, Japan, Mexico, Morocco, South Korea, Taiwan, Tunisia, and Venezuela (Table 2). Most of these importing countries use various types of barriers to restrict inflow of wheat to their countries. China has been the largest importer of wheat, followed by Brazil and Japan. However, China's wheat imports have been highly volatile, depending upon its domestic wheat production and import policies. China recently reduced wheat imports substantially, from 12.0 million tons in 1995 to 0.9 million tons in 1997.

Trade flows of wheat from exporting countries to importing countries are shown in Figure 1. The E.U. and the United States are major exporters of wheat, but they also import considerable amounts of wheat. The United States imports wheat from Canada, while the E.U. imports wheat from the United States, Canada, Argentina, and Australia.

Table 2. Wheat Imports by Country, 1995 - 1999 Average Imports

Country	1995	1996	1997	1998	1999	Average	Share

Wheat Exports

The major wheat exporting countries, the United States, Canada, the E.U., Australia, and Argentina, supply approximately 70% of the wheat traded in the world market. The United States is the largest exporter, followed by Canada and the E.U. (Table 3). The U.S. leads in exports of HRW and SRW wheats; an annual average of 29.3 million metric tons of all wheat were exported in 1995-99, of which 15.2 million tons were HRW and SRW; another 7.3 million tons were HRS. The United States competes with the E.U. for market share of SRW wheat exports. Major U.S. markets for SRW wheat include China, West Asia, and the North African Markets. E.U. markets for SRW wheat include the FSU, China, West Asia, and North African markets.

Canada is the leader in exports of HRS and durum wheat. The United States also exports HRS and durum wheat, and competes with Canada. The E.U. competes with the United States and Canada for market share of durum wheat exports. Major U.S. markets for HRS wheat include Southeast Asia and East Asia, including Japan and South Korea. Major Canadian markets for HRS wheat include China, the FSU, and the east Asian markets. The United States, Canada, and the E.U. intensely compete for the North African durum markets.

Australia and Argentina compete with the United States in exporting HRW wheat. Major U.S. markets for HRW wheat include the FSU, China, and East Asia. Argentina exports HRW wheat mainly to South America and West Asia. Australia's major markets are the North African countries, China, the FSU, and West Asia.

OUTLOOK FOR THE WORLD WHEAT INDUSTRY

Total world wheat trade is projected to increase 13.9% from 85.0 million metric tons in 1999 to 96.8 million metric tons in 2009 (Figure 1). Except for E.U. common and durum wheat, trade of all wheat classes is expected to increase for the 1999-2009 period. The E.U. exports could decrease, mainly because reductions in E.U. subsidies under WTO will make E.U. wheat production less competitive. Durum wheat production in Canada is predicted to increase faster than in other countries.

The wheat export price of U.S. common wheat is projected to increase gradually 23.0%, from \$124.2 per metric ton in 1999 to \$152.8 per metric ton in 2009 (Figure 2). The price of U.S. durum wheat is projected to increase 36% from \$145.5 per metric ton in 1999 to \$198.8 per metric ton in 2009. However, increases in the prices are expected to be small for the next 2-3 years.

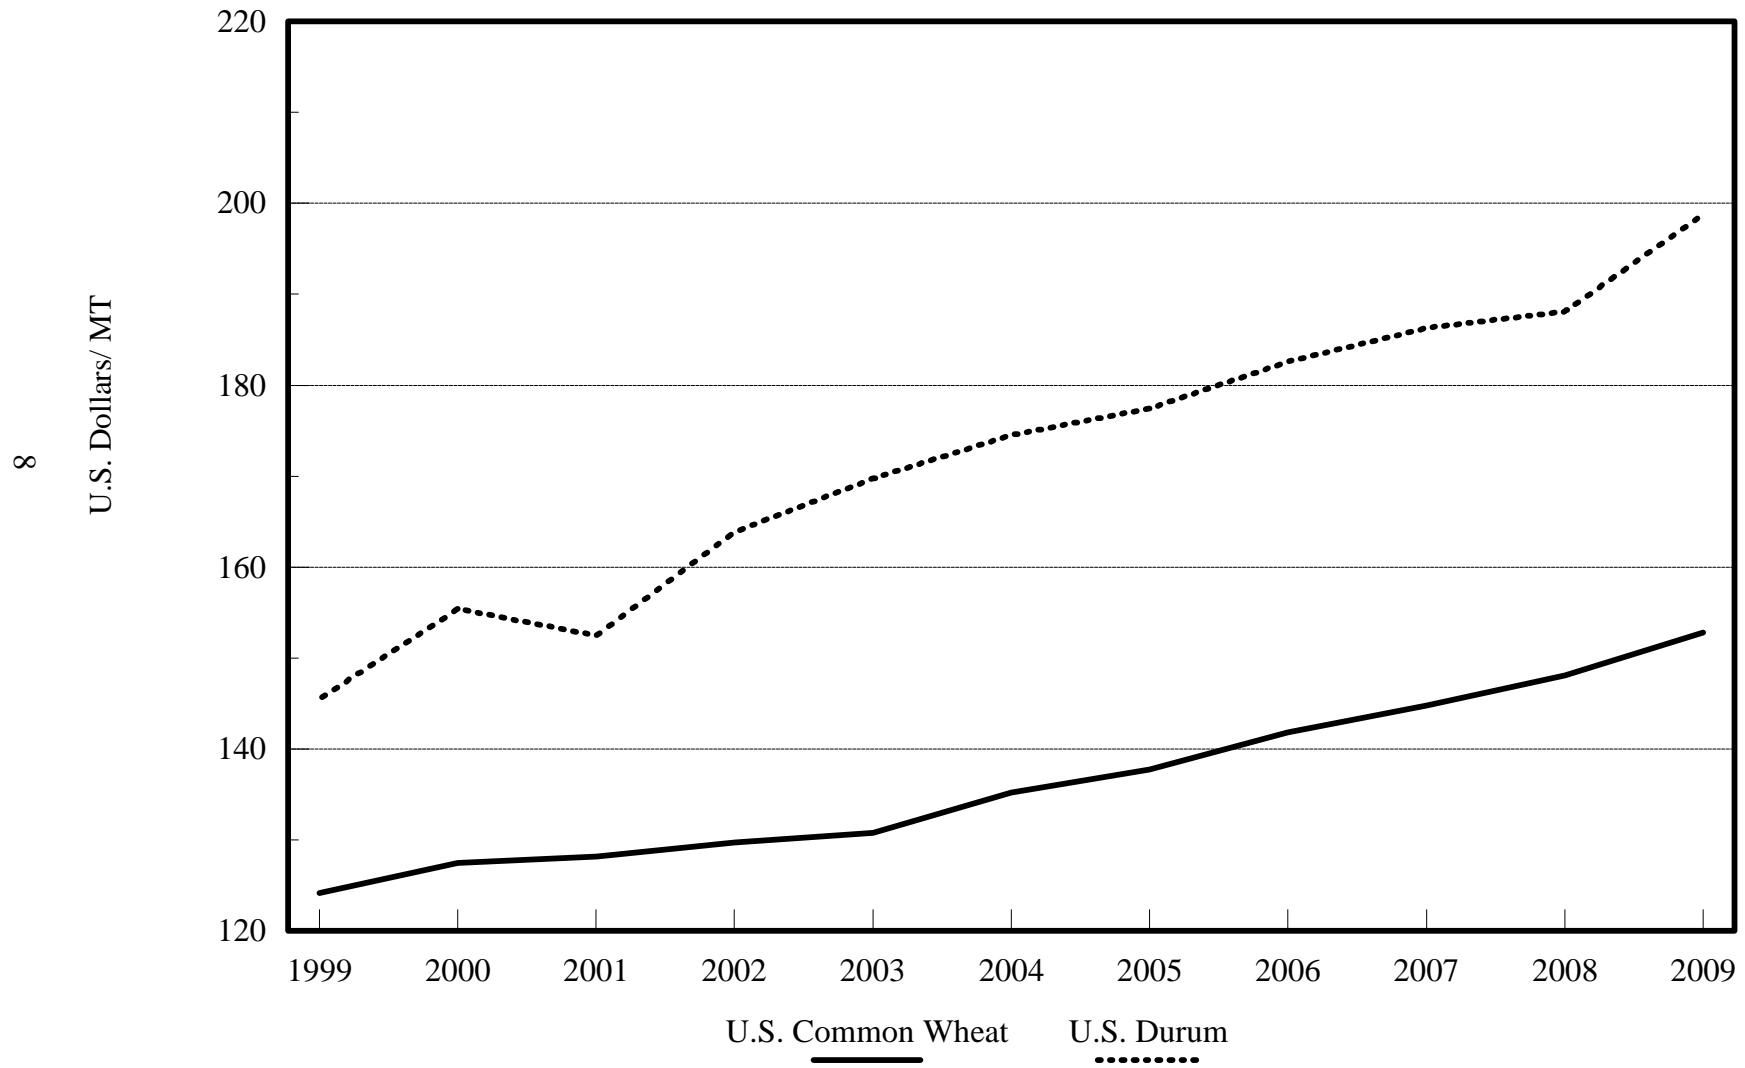

Figure 2. U.S. Wheat Export Prices, 1999 to 2009

United States

Table 4 shows wheat production, consumption, exports, and ending stocks in the United States. Total U.S. wheat production is expected to grow 15.1% from 1999 to 2009. Production of each class of wheat in 1999 is slightly smaller than the 3-year average production of the wheat class. For the 1999-2009 period, the largest increases in production occur for U.S. white wheat (26.5%), followed by HRS wheat (20.6%), and durum (19.5%). U.S. SRW wheat production increases by only 9.3%. Changes in production of different classes of wheat over the 1999-2009 period are shown in Figure 3. For all classes of wheat, production is expected to increase throughout the forecast period.

Table 4. Wheat Production, Consumption, Exports, and Carry-over Stocks in the United States

	Average (1997-1999)	1999	2009	% Change (1999-2009)

Common	14,407	14,614	17,858	22.2
Durum	1,433	1,786	1,693	-5.2

Total wheat harvested area is expected to increase from 53.9 million acres in 1999 to 61.0 million acres in 2009, and average yield is predicted to increase from 42.8 bushels per acre to 43.5 bushels per acre. Hard red spring wheat area is predicted to increase 2.5 million acres, and U.S. durum area is expected to increase 2.1 million acres.

U.S. wheat consumption is projected to grow 1.5% for common wheat and 15.1% for U.S. durum wheat for the 1999-2009 period (Figure 4). Durum consumption is expected to grow faster because of the popularity of pasta products in the United States.

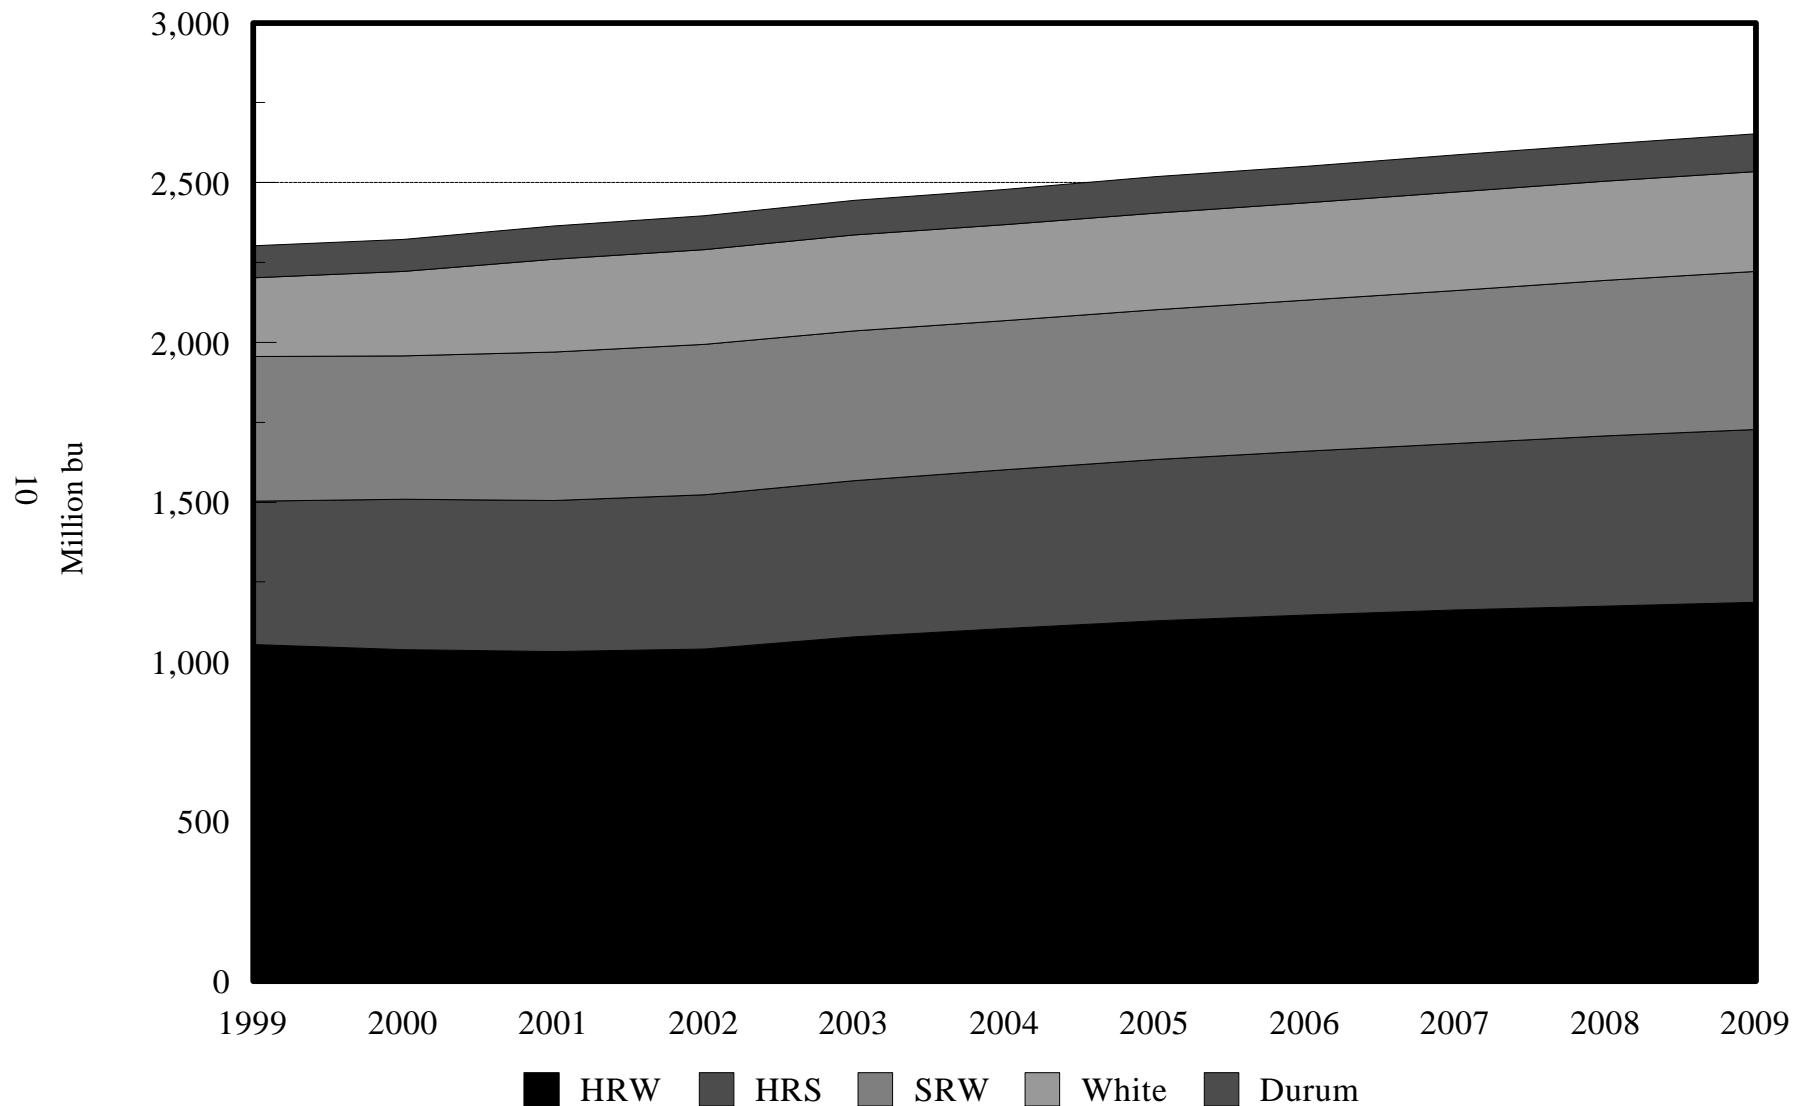

Figure 3. U.S. Wheat Production, 1999 to 2009

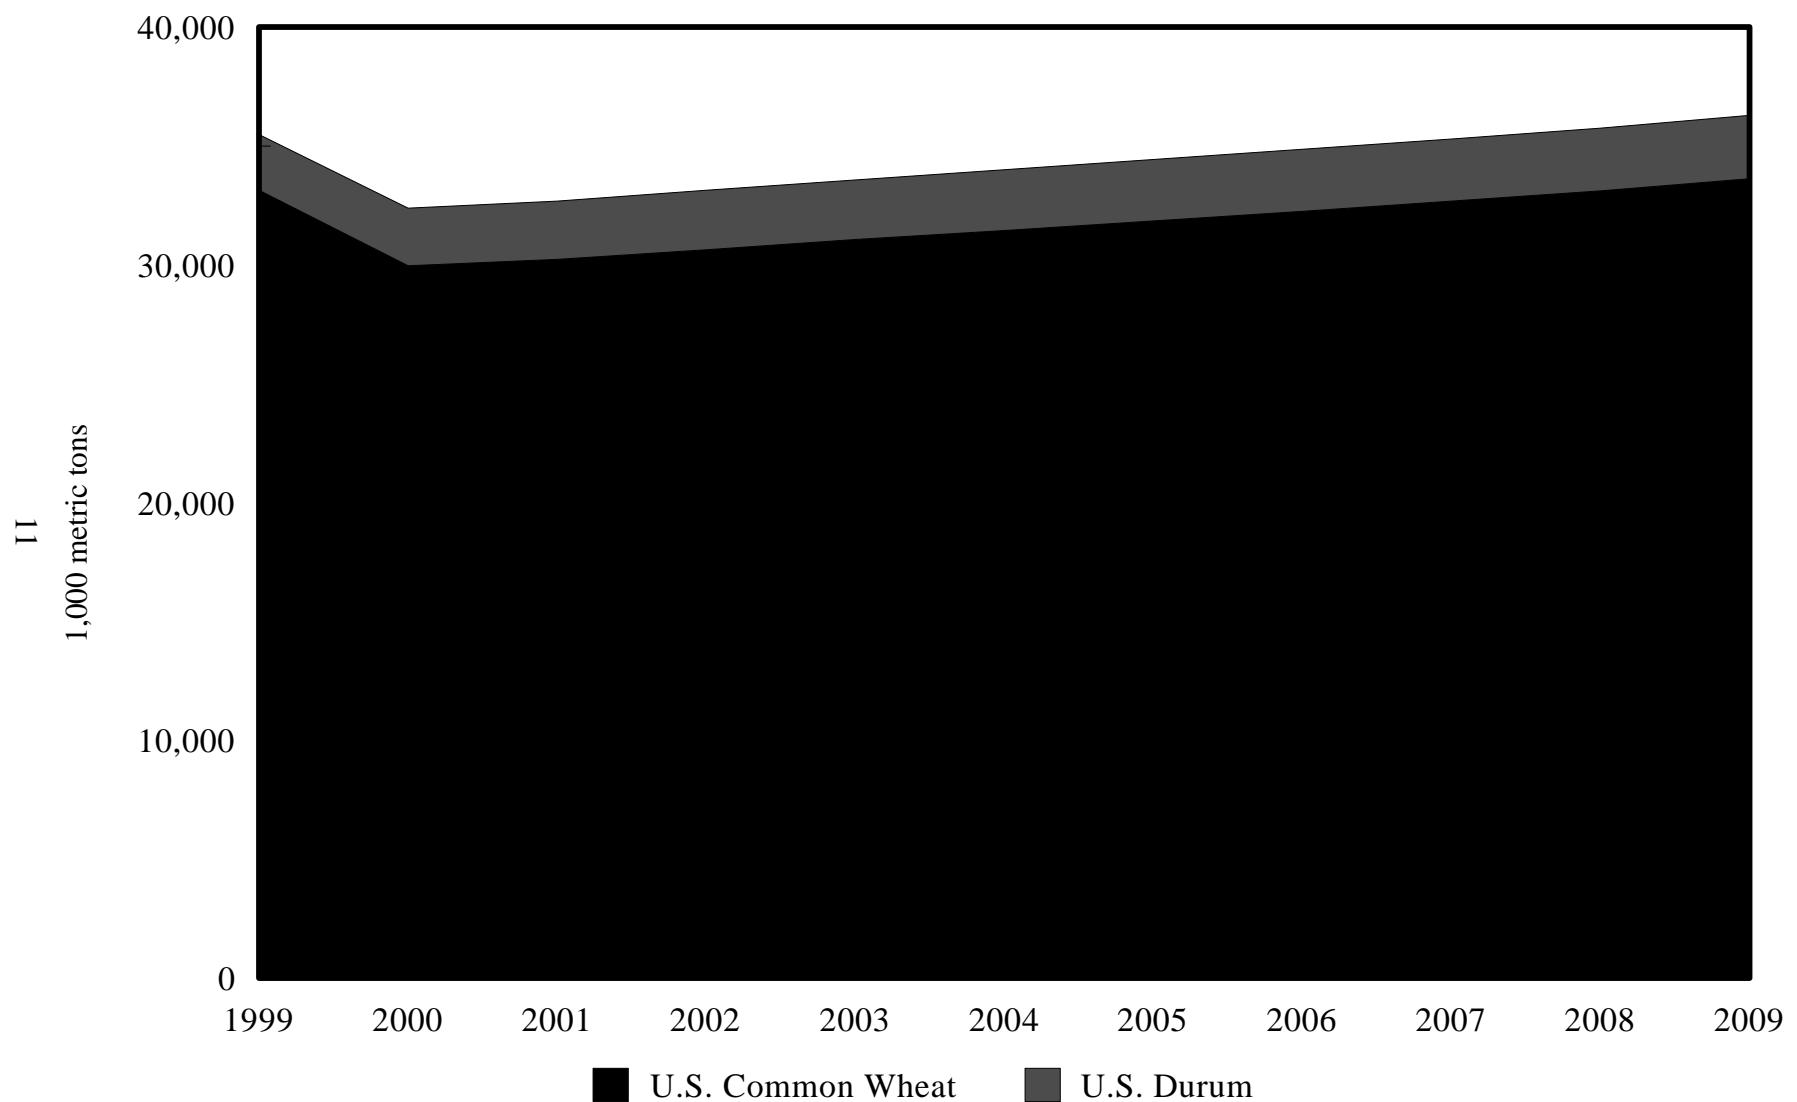

Figure 4. U.S. Domestic Wheat Consumption, 1999-2009

U.S. durum exports are projected to increase 66.1% from 326 thousand metric tons in 1999 to 544 thousand metric tons to 2009, which is 46.2% higher than the 3-year average export from 1997 to 1999. Common wheat exports are predicted to increase gradually from 25.4 million metric tons in 1999 to 35.3 million metric tons in 2009 (Figure 5).

Ending stocks are expected to increase for common wheat but decrease for durum wheat. Total ending stocks for common wheat are predicted to increase 22.2% for the 1999 -2009 period and decrease 5.2% for durum wheat (Figure 6).

Canada

The predicted production, consumption, and exports of CWRS and CWAD wheat in 1999 are larger than the 3-year averages (Table 5). Canadian WRS and WAD wheat production are predicted to increase 7.6% and 34.4%, respectively, for the 1999-2009 period. Total area for WRS wheat is expected to increase from 9.2 million hectares in 1999 to 10.3 million hectares in 2009, while WAD wheat area is expected to increase from 1.35 million hectares in 1999 to 1.76 million hectares in 2009.

Domestic consumption of WRS and WAD wheat is predicted to increase 5.3% and 6.9%, respectively, for the 1999-2009 period. Canadian WRS wheat exports are projected to increase 10.2% by 2009, and WAD wheat exports are predicted to increase 35.5% from 2.3 million metric tons in 1999 to 3.1 million metric tons in 2009.

Ending stocks are predicted to increase 7.4% for WRS wheat and increase 10.6% for WAD wheat for the 1999-2009 period.

Figure 7 shows changes in production, consumption, exports, and ending stocks of WRS wheat in Canada from 1999 to 2009, and Figure 8 shows those for WAD wheat. Consumption, exports, and ending stock of WRS and WAD wheat increase gradually throughout the period.

European Union

Table 6 presents production, consumption, exports, and ending stocks of common and durum wheat in the E.U. for the 1999-2009 period. Common wheat production in the E.U. is predicted to increase 0.4% from 1999 to 2009, while durum wheat production is expected to increase 4.7%.

Domestic consumption of common wheat is projected to decrease 0.9% from 76.7 million metric tons in 1999 to 76.0 million metric tons in 2009. However, consumption of durum wheat is predicted to increase for the period. Exports of both wheat classes are predicted to decrease 14.8% for common wheat and 7.3% for durum wheat for the 1999-2000 period. Ending stocks for common wheat are expected to increase, while those for durum wheat are expected to decrease.

Figures 9 and 10 show changes in consumption, exports, and ending stocks of common and durum wheat, respectively, for the 1999-2009 period. For common wheat, production and ending stocks are expected to increase gradually, while exports are expected to decrease. Production and consumption of durum wheat are predicted to increase for the period, while exports and ending stocks to decrease.

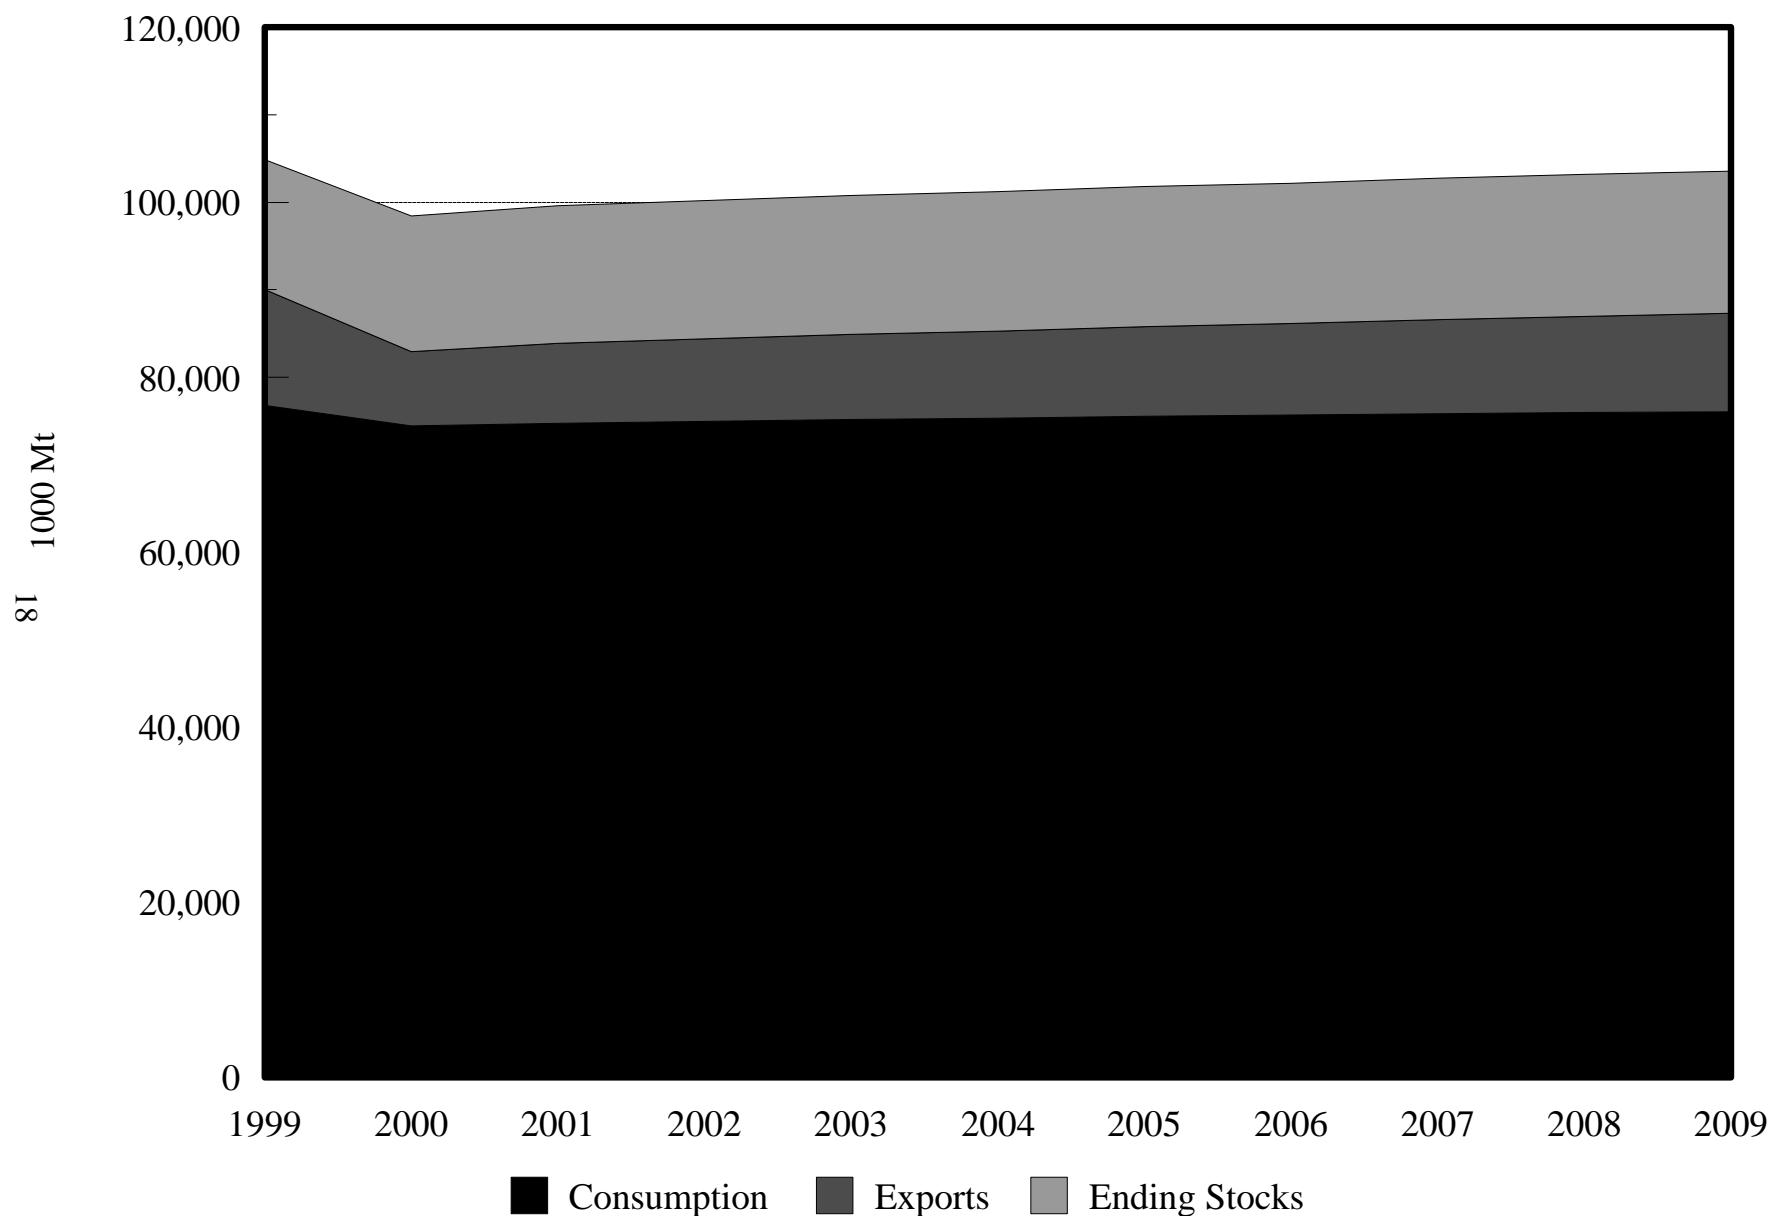

Figure 9. E.U. Common Wheat Production and Utilization, 1999 to 2009

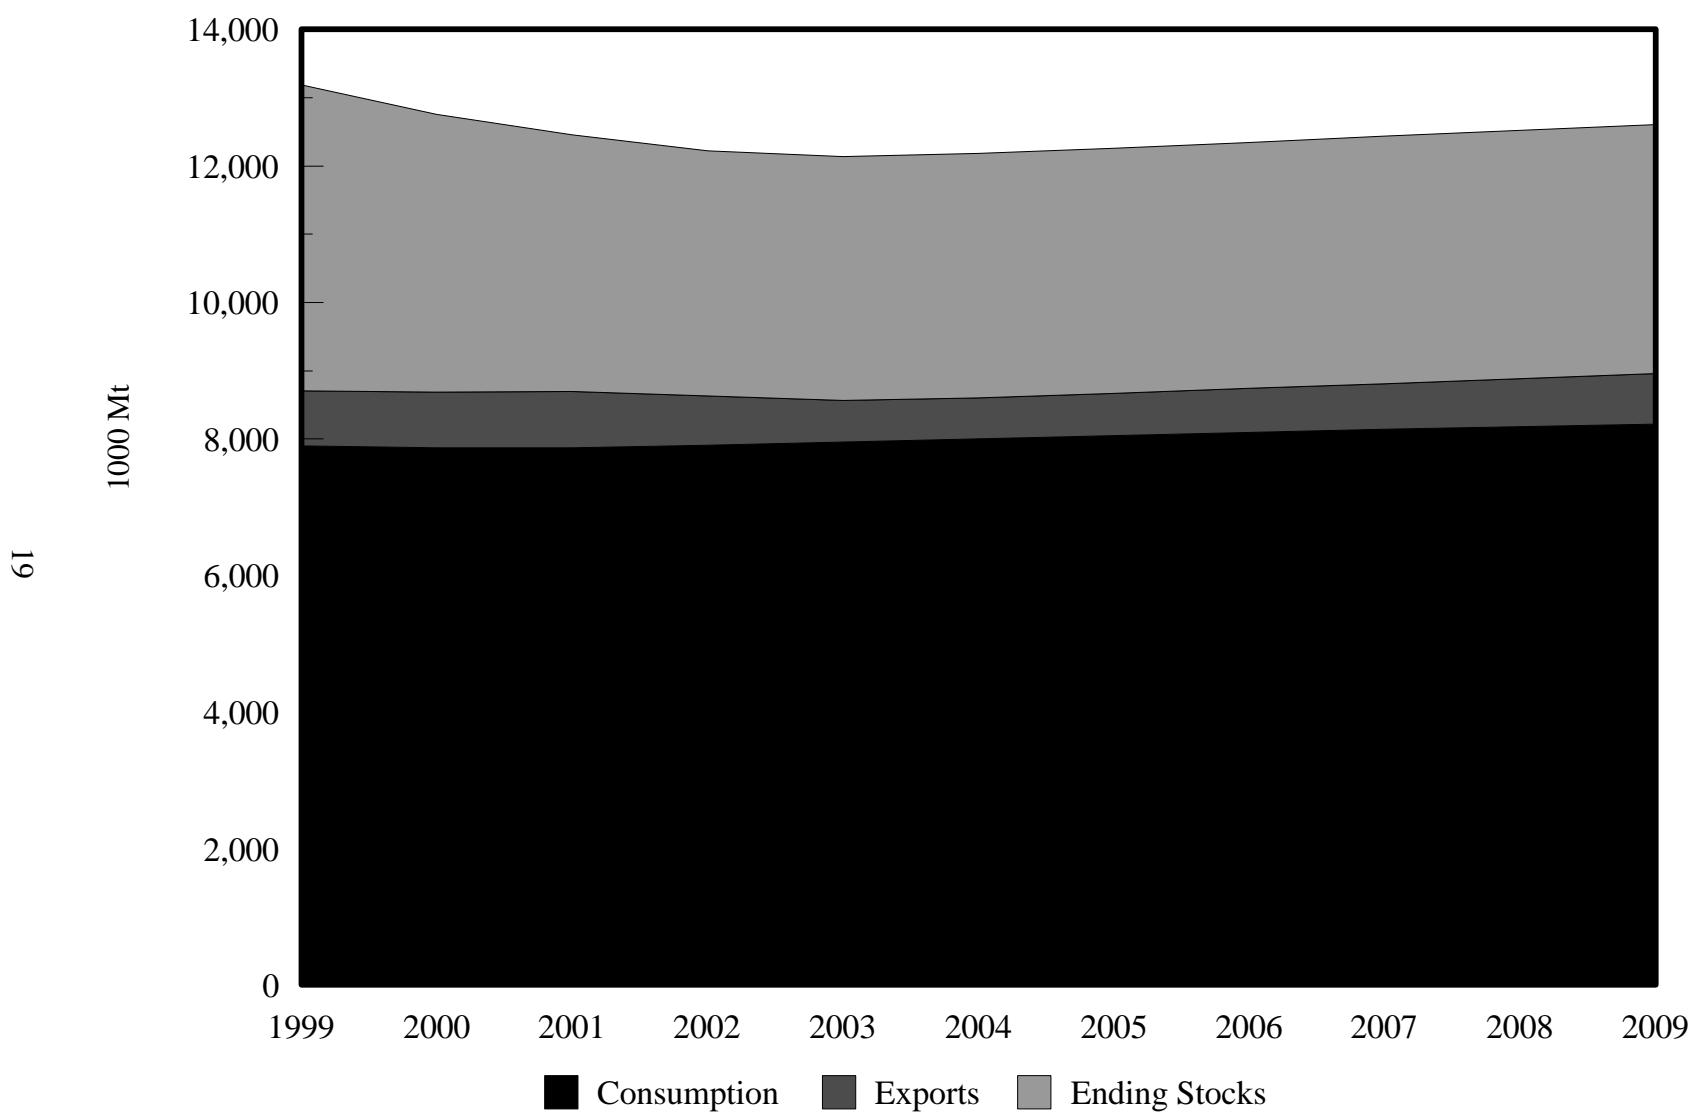

Figure 10. E.U. Durum Wheat Production and Utilization, 1999 to 2009

Australia

Australia's wheat production is projected to grow 6.2% over the 1999-2009 period (Table 7). Yields are expected to increase gradually at the historical trend line, while wheat area is expected to increase 2.5%. Domestic wheat consumption is predicted to increase 7.4% from 5.1 million metric tons in 1999 to 5.5 million metric tons in 2009. Wheat exports also are predicted to increase from 18.0 million metric tons in 1999 to 19.1 million metric tons in 2009. Figure 11 shows changes in consumption, exports, and ending stocks for the 1999-2009 period.

Table 7. Wheat Production, Consumption, Exports, and Carry-over Stocks in Australia

	Average (1997-1999)	1999	2009	% Change (1999-2009)
-----thousand metric tons-----				
Production	21,130	23,040	24,462	6.2
Consumption	5,078	5,100	5,478	7.4
Exports	16,529	18,015	19,070	5.9
Carry over	1,358	1,325	3,213	142.5

Argentina

Argentine wheat production is projected to increase 8.6% from 14.0 million metric tons in 1999 to 15.2 million metric tons in 2009 (Table 8). Domestic wheat consumption is expected to increase 19.8% from 4.5 million metric tons to 5.4 million metric tons. Wheat exports are predicted to increase from 9.5 million metric tons in 1999 to 9.8 million metric tons in 2009, a 3.3% increase. Ending stocks also are expected to increase 45.0%. Figure 12 shows changes in consumption, exports, and ending stocks for the 1999-2009 period.

Table 8. Wheat Production, Consumption, Exports, and Carry-over Stocks in Argentina

	Average (1997-1999)	1999	2009	% Change (1999-2009)
-----thousand metric tons-----				
Production	13,432	13,978	15,184	8.6
Consumption	4,403	4,525	5,420	19.8
Exports	9,069	9,453	9,761	3.3
Carry over	440	300	435	45.0

Importing Countries

Importing countries are grouped into the Asian region (China, Japan, Korea, and Taiwan), the African region (Algeria, Egypt, Morocco, and Tunisia), Latin America (Mexico, Brazil, and Venezuela), and the FSU (Table 9).

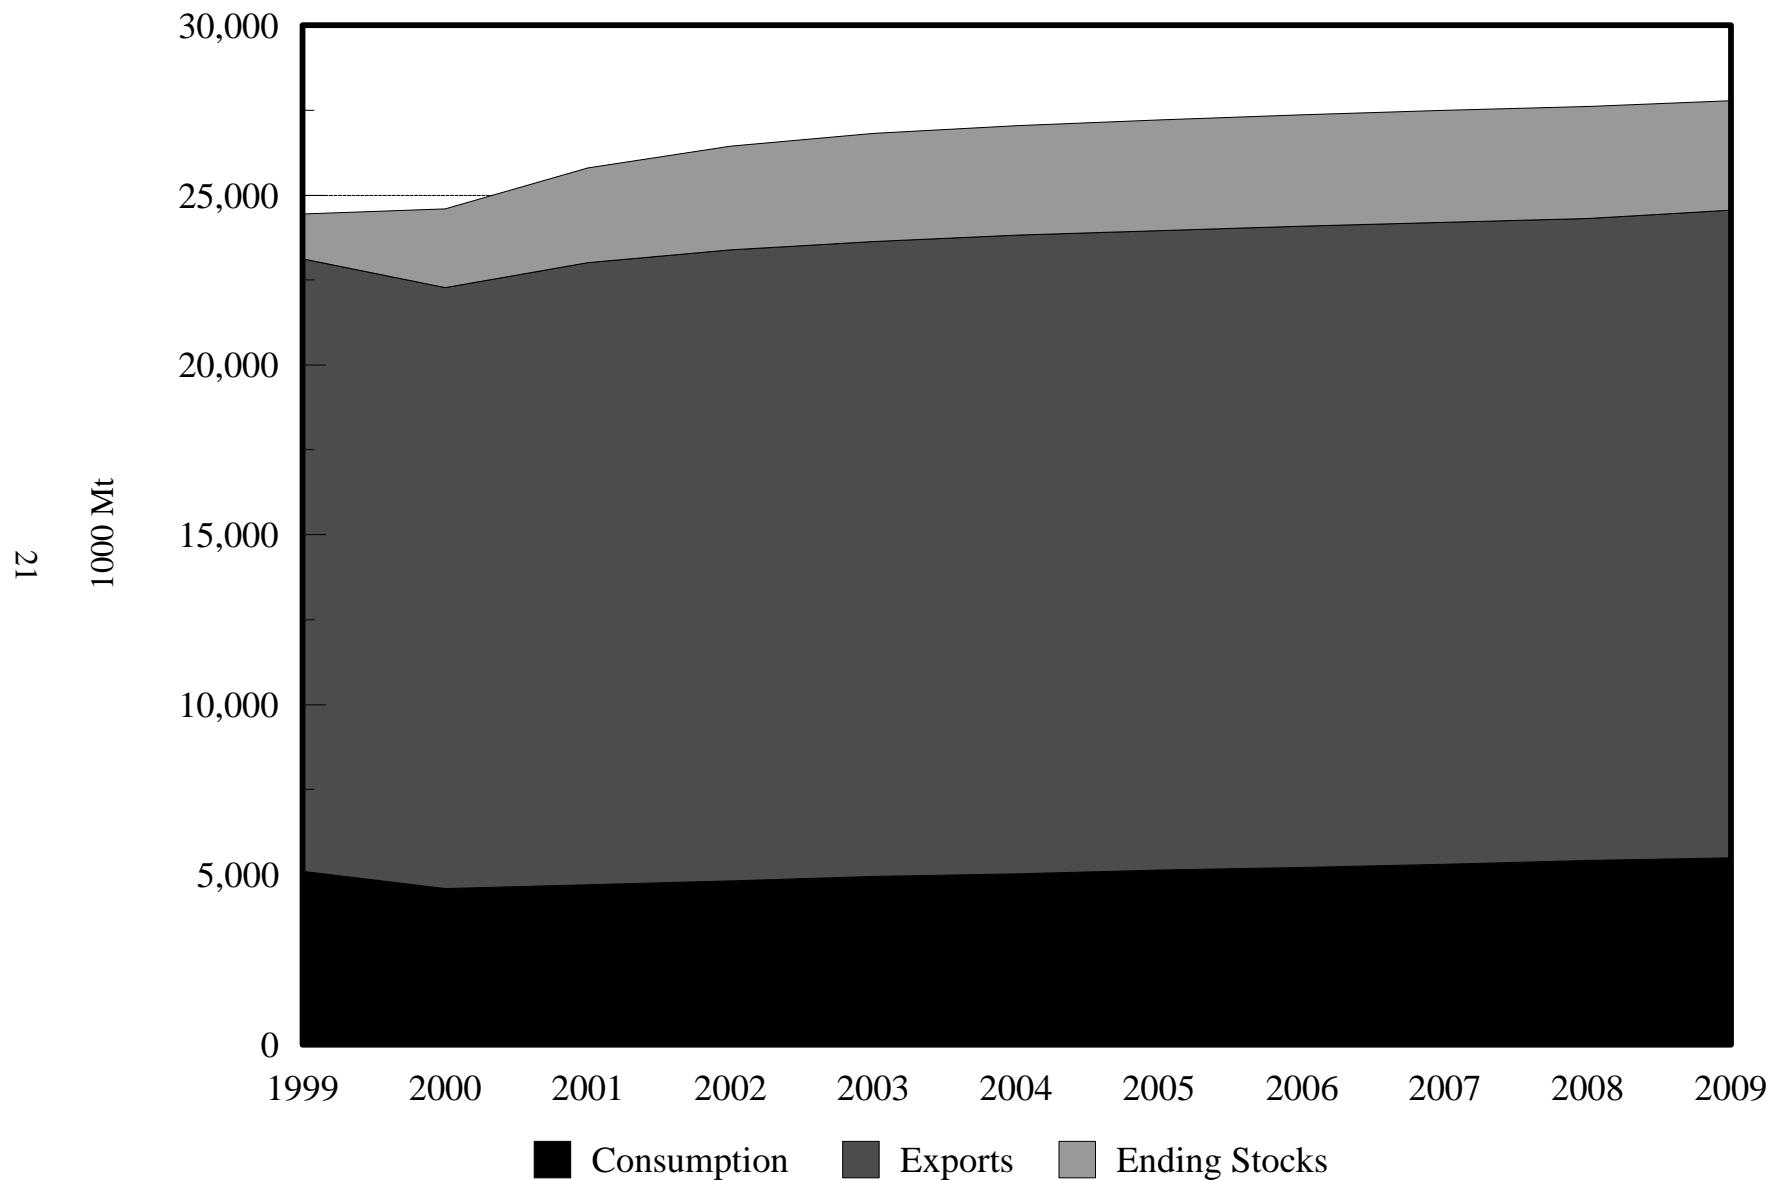

Figure 11. Australia Common Wheat Production and Utilization, 1999 to 2009

Brazil Common	6,570	7,004	8,064	15.1
Mexico Common	2,083	2,100	2,747	30.8
Venezuela Common	944	950	1,183	24.5
Venezuela Durum	317	325	386	18.8

Asian Importers

Asian imports of wheat are projected to increase 18.3% between 1999 and 2009. Chinese imports of common wheat are projected to increase 98.5% from 1.0 million metric tons to 1.9 million metric tons for the 1999-2009 period. However, China may import more wheat if China reduces its tariffs on wheat based on its trade negotiations with the United States and the E.U. for its membership in the WTO. Japan's, Korea's, and Taiwan's imports are projected to increase 8.8%, 12.8%, and 23.0%, respectively, for the 1999-2009 period (Figure 13).

Former Soviet Union

Total imports of wheat are projected to decrease 7.9% in the FSU for the 1999-2000 period. Imports of durum wheat are projected to remain constant (Figure 14).

African Region

North African imports of wheat are projected to increase 24.6% between 1999 and 2009. Egyptian imports of common wheat are projected to increase 34.7% from 6.7 million metric tons to 9.0 million metric tons between 1999 and 2009. Algeria is expected to import both common

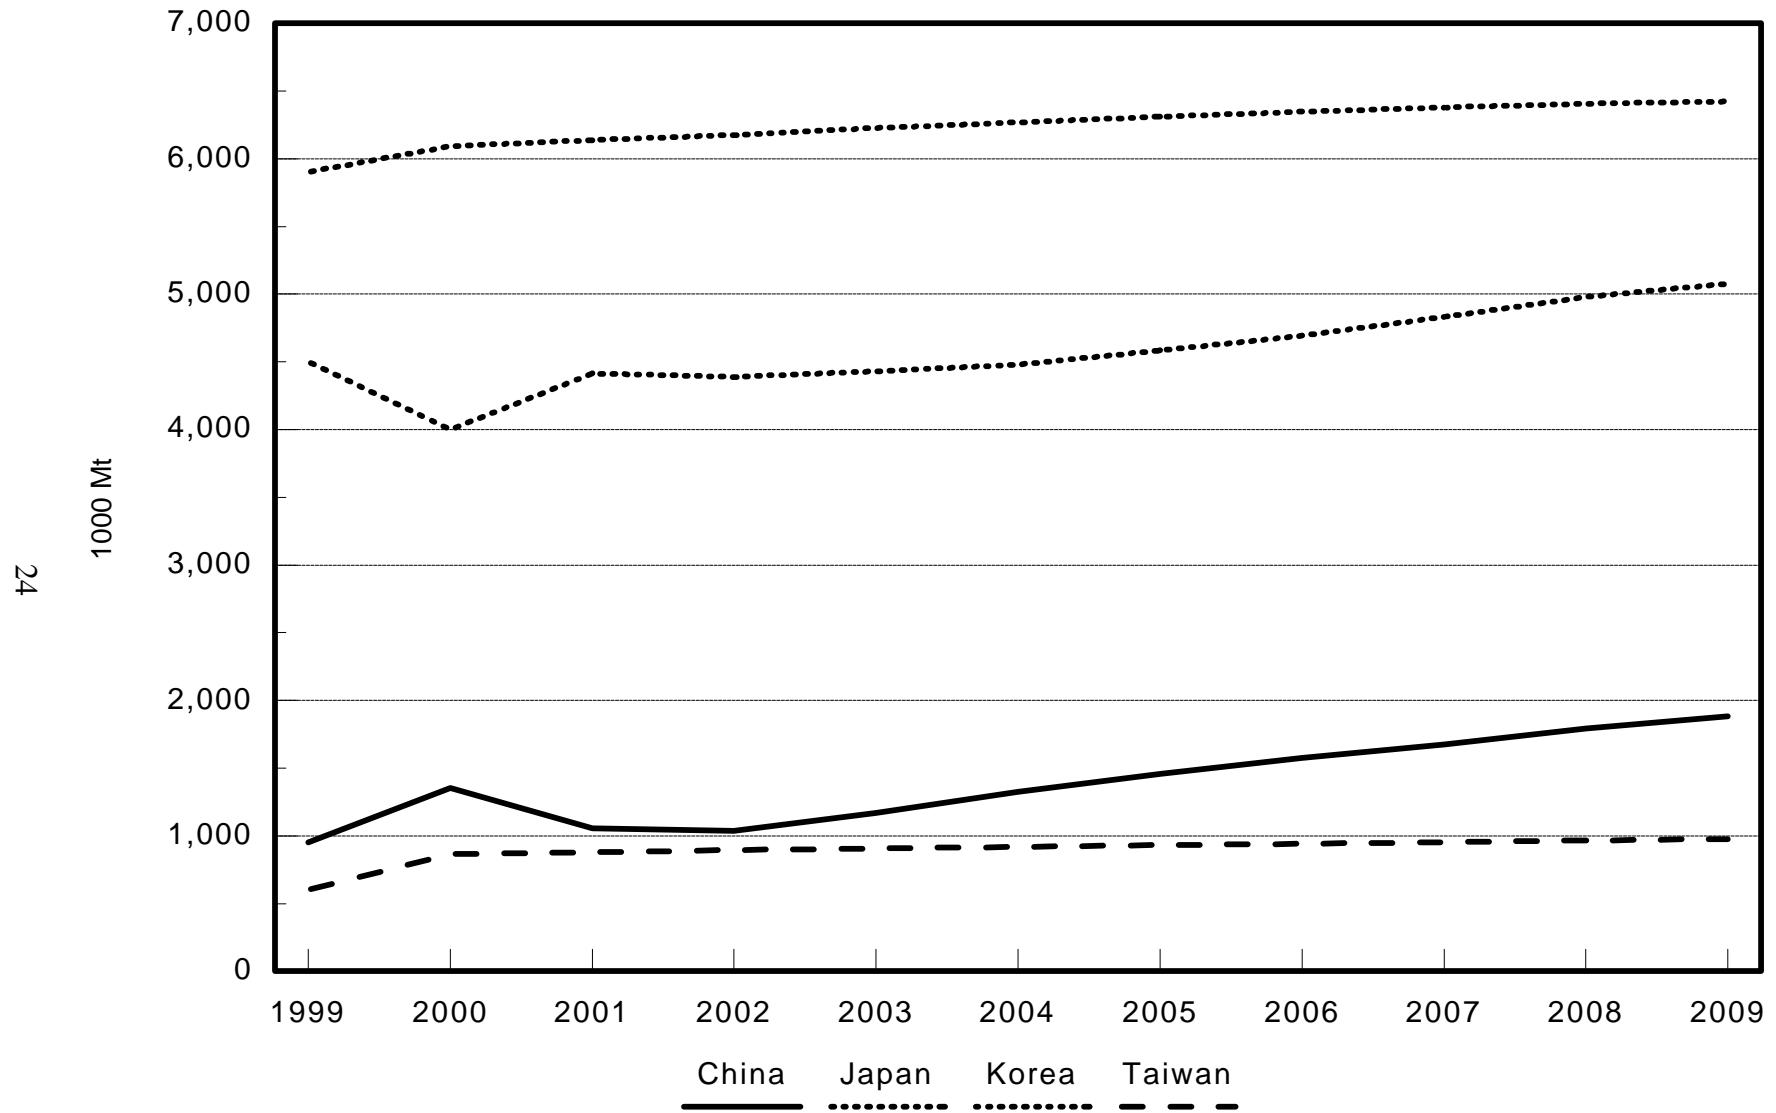

Figure 13. Common Wheat Imports by Major Asian Countries, 1999 to 2009

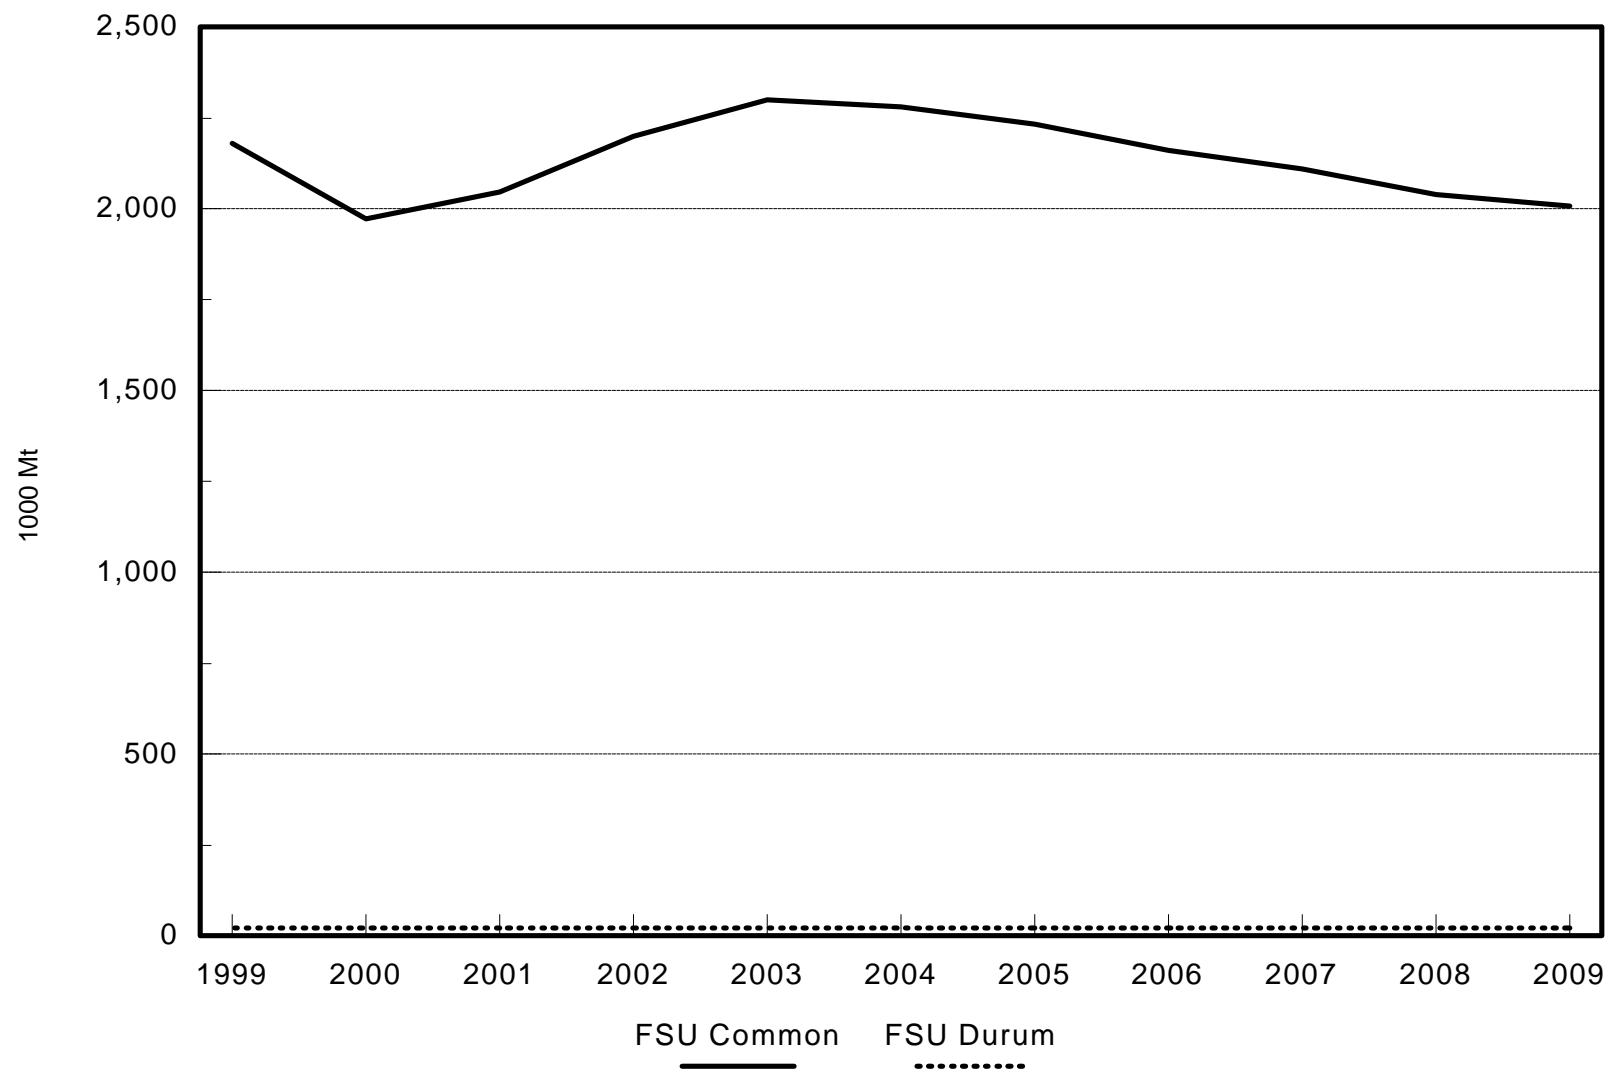

Figure 14. Common and Durum Wheat Imports by Former Soviet Union, 1999 to 2009

wheat and durum wheat. Algerian imports of common wheat are projected to increase 25.1% from 3.0 million metric tons in 1999 to 3.8 million metric tons in 2009, and durum wheat imports are projected to increase 26.7% from 1.5 million metric tons to 1.9 million metric tons. Morocco's imports of common wheat are projected to decrease 9.5% from 2.7 million metric tons to 2.5 million metric tons. Tunisian imports of common wheat are projected to increase 63.0% from 0.6 million metric tons to 1.0 million metric tons between 1999 and 2009. Its durum wheat imports are projected to increase 18.8% from 0.4 million metric tons to 0.5 million metric tons between 1999 and 2009 (Figure 15).

Latin America

Mexican imports are projected to increase 30.8% from 2.1 million metric tons in 1999 to 2.7 million metric tons in 2009. Venezuela is expected to import more common and durum wheat. Common wheat imports are projected to increase 24.5% from 1.0 million metric tons in 1999 to 1.2 million metric tons in 2009, and durum wheat imports are projected to increase 18.8% from 0.3 million metric tons to 0.4 million metric tons (Figure 16). Brazilian imports are projected to increase 15.1% from 7.0 million metric tons in 1999 to 8.1 million metric tons in 2009.

CONCLUDING REMARKS

This report evaluates the U.S. and world wheat industries for the 1999-2009 period by using the Global Wheat Policy Simulation Model which is operational at North Dakota State University. The baseline projections are based on a series of assumptions about the general economy, agricultural policies, weather conditions, and technological changes.

Prices for both common wheat and durum wheat are predicted to increase about 23% and 36%, respectively, for the 1999-2009 period. However, increases in prices are expected to be slow for the next 2-3 years.

World wheat trade is projected to increase 13.9% from 85.0 million metric tons in 1999 to 96.8 million metric tons in 2009. Durum wheat trade is expected to grow faster than common wheat trade. Because of the financial crisis in South and Southeast Asian countries, their import demand for common wheat is expected to be weak for the next few years, but it is expected to recover later in the forecast period.

All exporting countries except the E.U. are predicted to increase their production and exports of common wheat for the 1999-2009 period. World consumption of common wheat is expected to increase faster than the world production, resulting in a gradual increase in the world price of common wheat. Production and exports of common wheat in the United States are predicted to grow faster than those in other exporting countries. It is predicted that both common and durum wheat exports in the E.U. are predicted to decrease. Some of the common wheat produced could be used as feed in the E.U.

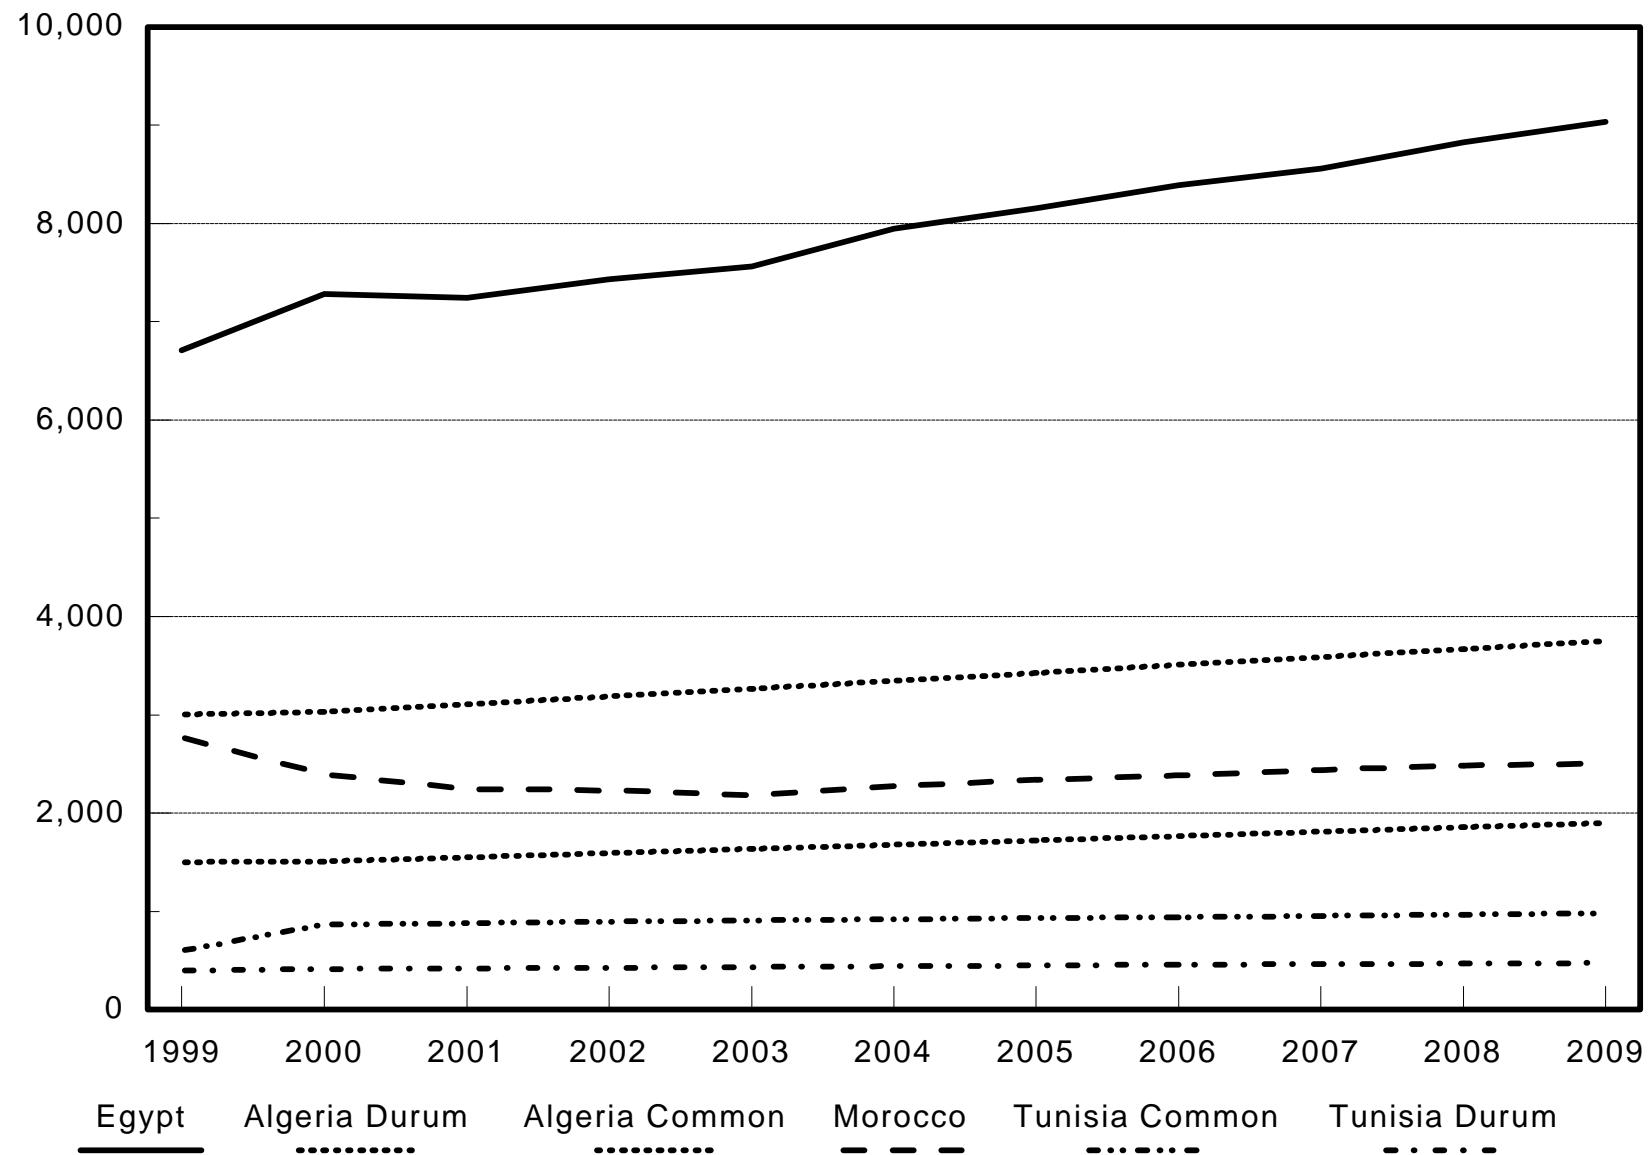

Figure 15. Common and Durum Wheat Imports by Major African Countries, 1999 to 2009

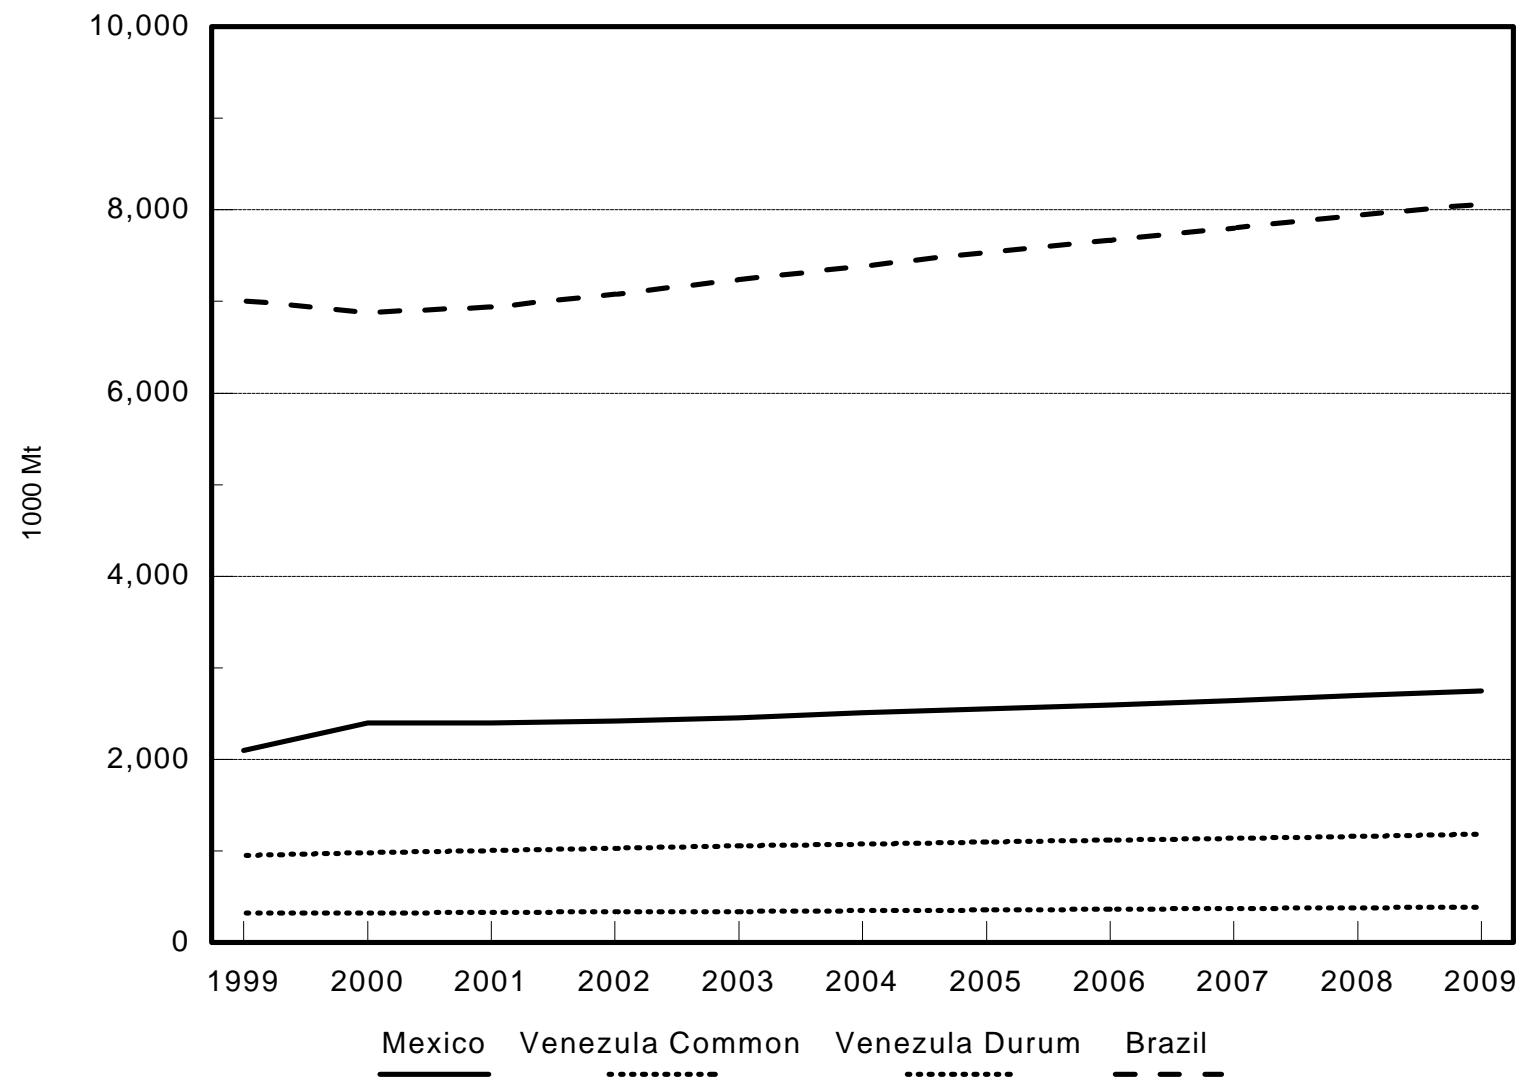

Figure 16. Common and Durum Wheat Imports by Latin American Countries, 1999 to 2009

The United States is expected to increase both its common and durum wheat production and exports. Canada is expected to increase its common and durum wheat production and exports for the forecasting period, while the E.U. is expected to decrease its production and exports. This implies that the E.U. may become less competitive in wheat production under the UR Agreement.

Common wheat demand in Southeast Asian countries is predicted to grow for the 1999-2009 period. China's imports for common wheat are expected to grow faster than other countries in the region.

The FSU is predicted to decrease its imports of common wheat for the 1999-2009 period, but its import of durum wheat is expected to remain constant. The country may increase its domestic production of common wheat gradually for the forecasting period.

Egypt, the largest importer of common wheat in the North Africa region, is predicted to increase its imports of common wheat. Import demands for both common and durum wheat in other countries in the region are also expected to increase.

Import demands for common wheat in Brazil, Venezuela, and Mexico are expected to be strong for the 1999-2009 period. Import demand for durum wheat in Venezuela is also predicted to be strong for the forecasting period.
