## ABSTRACT

This report evaluates the U.S. and world wheat markets for the 2002-2012 period by using the Global Wheat Policy Simulation Model. This analysis is based on a series of assumptions about general economic conditions, agricultural policies, weather conditions, and technological change.

Both the U.S. and world wheat economies are predicted to improve for the next ten years. World demands for both common and durum wheat are expected to grow faster than world production of the two wheat classes, resulting in gradual increases in prices of the wheat varieties, which are predicted to increase 15.3% for durum wheat and 17.3% for common wheat for the 2002-2012 period. World trade volumes of both classes of wheat are expected to expand, but trade volume of durum wheat may grow faster than common wheat.

**Keywords:** common wheat, durum wheat, production, exports, consumption, ending stocks

## HIGHLIGHTS

Total world wheat trade is projected to increase by 21.6% from 79.9 million metric tons in 2001 to 97.2 million metric tons in 2011. Prices for durum and common wheat are expected to increase about 15.3% and 17.3%, respectively, for the 2001-2011 period.

Production of all wheat classes in the United States is predicted to increase for the 2001-2011 period. The largest increase in production occurs for U.S. hard red winter (HRW) wheat, followed by soft red winter (SRW) wheat. Exports of all wheat classes are predicted to increase for the 2001-2011 period.

Production of both Canadian western red spring (CWRS) and Canadian western amber durum (CWAD) wheat is predicted to increase for the 2001-2011 period. However, CWAD wheat production will grow faster than CWRS wheat production.

Domestic consumption of CWRS and CWAD wheat is predicted to increase for the 2001-2011 period. CWRS wheat exports are projected to increase faster than CWAD wheat exports.

Common wheat production in the European Union (EU) is predicted to increase 9.9% from 2001 to 2011, while durum wheat production is expected to increase 14.3%. Exports of both wheat classes are predicted to increase.

Australia's wheat production is predicted to grow 16.1% over the 2001-2011 period. Domestic wheat consumption is expected to increase 7.4% from 5.5 million metric tons in 2001 to 5.9 million metric tons in 2011. Wheat exports also are expected to increase from 17.4 million metric tons in 2001 to 16.8 million metric tons in 2011.

Argentine wheat production is projected to increase 5.0% from 15.7 million metric tons in 2001 to 16.5 million metric tons in 2011. Domestic wheat consumption is expected to increase 1.8%, from 4.1 million metric tons to 4.2 million metric tons, for the period. Wheat exports are expected to increase from 11.6 million metric tons in 2001 to 12.5 million metric tons in 2011.

Most importing countries are predicted to increase their imports for both common and durum wheat. Among those countries, import demand for common wheat from China and Tunisia will grow faster than from other countries. Import demand for durum wheat from Algeria is predicted to grow faster than common wheat.

## **2002 OUTLOOK OF THE U.S. AND WORLD WHEAT INDUSTRIES, 2001-2011**

**Won W. Koo and Richard D. Taylor\***

### **INTRODUCTION**

This report evaluates the U.S. and world wheat industries for the 2001-2011 period by using the Global Wheat Policy Simulation Model developed by Benirschka and Koo. The outlook projection is based on an assumption that current farm and trade policies adopted by wheat exporting and importing countries are unchanged. Assumptions associated with macroeconomic variables, such as GDP growth rates, interest rates, inflation rates, exchange rates, and consumer price indices in the United States and other countries, are based on forecasts prepared by the WEFA Group and Project LINK. Average weather conditions and historical rates of technological change are also assumed to prevail during the projection period.

Wheat is a differentiated product. Substitution among wheat classes is imperfect, and consumer preferences differ among countries, suggesting that wheat characteristics are an important determinant of trade flows. The Global Wheat Policy Simulation Model is a partial equilibrium model that distinguishes wheat into common and durum wheat. U.S. common wheat is further divided into four classes: hard red winter (HRW), hard red spring (HRS), soft red winter (SRW), and white wheat.

The model contains 6 exporting countries and regions [Argentina, Australia, Canada, the United States, the European Union (EU), and the Former Soviet Union (FSU)] and 12 importing countries and regions [Algeria, Brazil, China, Egypt, Japan, Mexico, Morocco, South Korea, Taiwan, Tunisia, Venezuela, and a Rest of the World region]. The FSU became an exporting country in 2001 and is projected to continue to export wheat throughout the forecast period. The model simulates production, consumption, stocks, and exports or imports for wheat classes over a 10-year period. The model is solved for a set of equilibrium wheat prices in which demand for each wheat class equals supply for every year. The model is linked to the Food and Agricultural Policy Research Institute (FAPRI) model and uses the predicted prices of all agricultural commodities, except wheat, from the model. The model used 2001 as the base year of the simulation.

Wheat is widely produced across the world. Total world wheat production has increased from 531 million tons in 1986/87 to 591 million tons in 2001/02. China (95 million tons) was the largest producer of wheat in 2001, followed by the EU (92 million tons) and the United States (53 million tons). Other major wheat-producing countries are the FSU, Canada, Australia, Turkey, India, and Argentina. These nine countries produce about 74% of the wheat produced in the world. Because of the concentration of wheat production in a few countries, a large volume of wheat is traded in the world market. The total quantity of wheat traded in the world market was 118 million tons in 2001, which is about 20% of wheat produced in that year. Major exporting countries are the United States, Canada, Australia, the EU, and Argentina.

---

\*Professor and director, and research associate, respectively, in the Center for Agricultural Policy and Trade Studies, North Dakota State University, Fargo.

The world wheat market has changed dramatically in the past decade. Farm support policies in exporting and importing countries have encouraged production, resulting in increasing stocks. Countries used quotas, variable levies, tariffs, and other forms of import restrictions to protect domestic producers. As world trade decreased during the early 1980s due to a depressed world economy, major exporting countries expanded the use of export subsidies or export promotion programs to maintain their grain market share.

The Uruguay Round of GATT negotiations, which became effective in 1995, has affected trade flows of wheat from exporting countries to importing countries. In addition, recent financial crises in several Asian countries, including South Korea, Thailand, Indonesia, and Taiwan, also have affected the world wheat market. Import demand for wheat within those countries has been reduced substantially, resulting in depressed wheat prices in the world market. The average export price of wheat at the Gulf ports decreased from \$5.02 per bushel in 1996/97 to \$3.30 per bushel in 2001/02.

## **WORLD WHEAT INDUSTRY**

World wheat trade is dominated by a few exporting countries: the United States, Canada, Australia, the EU, and Argentina. These countries have handled over 80% of wheat traded in the world market. While competition among exporting countries is strong, the world wheat market is not perfectly competitive. Australia and Canada use wheat boards to market their grain, while the EU relies on export subsidies to increase its market share. In addition, all major wheat exporters use credit guarantees and long-term preferential trade agreements to promote their exports.

### **Wheat Classes**

Most wheat varieties grown today belong to the broad category of common or bread wheat, which accounts for approximately 95% of world wheat production. The remaining 5% of world wheat production is durum wheat used to produce pasta and couscous. Common wheat is further divided into hard and soft wheat. Wheat varieties are highly differentiated in terms of their agronomic and end-use attributes. Based on criteria such as kernel hardness, color, growth habitat, and protein content, wheat is divided into several classes. Color and hardness refer to physical properties of the wheat kernel. Based on the color of the outer layer of the kernel, common wheat varieties are described as white, amber, red, or dark, while the hardness of the kernel is used to characterize them as hard or soft.

Growth habitat is an important agronomic feature of wheat varieties. Winter wheat is planted in late summer or fall and requires a period of cold winter temperatures for heading to occur. After using fall moisture for germination, the plants remain in a vegetative phase or dormancy during the winter and resume growth in early spring. In contrast to winter wheat, spring wheat changes from vegetative growth to reproductive growth without exposure to cold temperatures. In temperate climates, spring wheat is sown in spring. Since yields for winter wheat tend to be higher than for spring wheat, spring wheat is produced primarily in regions where winter wheat production is infeasible, where frozen soil kills the wheat plants, or where winters are too warm. Countries with mild winters, such as Argentina, Australia, and Brazil, produce spring wheat but plant in the fall rather than in the spring.

## **Wheat Production**

Because of differences in soil types and climates, wheat produced in one country generally differs from that produced in other countries. The United States produces hard, soft, and durum wheats. Hard wheat produced in the United States is further divided into hard red winter (HRW) and hard red spring (HRS) wheat, and soft wheat is divided into soft red winter (SRW) and white wheat. SRW wheat is produced in the Corn Belt and Southern states. HRS and durum wheat are grown in the Northern Plains, mainly North Dakota, which produces about 80% of durum wheat and 60% of HRS wheat produced in the United States. HRW wheat is grown primarily in the Central Plains, particularly Kansas and Oklahoma. White wheat, a type of soft wheat, is grown in the Pacific Northwest, Michigan, and New York. Average U.S. wheat production for the 1997-2001 period was 62.7 million tons with 26.9 million tons of HRW, 13.0 million tons of HRS, 12.2 million tons of SRW, 7.7 million tons of white wheat, and 2.8 million tons of durum wheat (Table 1).

The majority of Canadian wheat is produced in Saskatchewan, southwestern Manitoba, and southeastern Alberta. Canada produces primarily a hard red spring wheat, Canadian Western Red Spring (CWRS), and durum wheat. Average Canadian wheat production for the 1997-2001 period included 21.7 million tons of HRS and 3.5 million tons of durum wheat (Table 1).

The EU produced an annual average of 87.2 million tons of a soft wheat and 8.4 million tons of durum wheat during the 1997-2001 period. France accounted for 40% of soft wheat

production in the EU in 2000. Germany and the United Kingdom are also major producers. The majority of durum is produced in Italy, Greece, and France. Italy accounted for nearly 60% of EU durum production in 2000, followed by Greece (22%), and France (13%).

Australia primarily produces a winter wheat which is similar to HRW wheat in terms of quality and characteristics. Australian average wheat production amounted to 22.2 million tons for the 1997-2001 period. Wheat production is concentrated in the eastern Australian states of New South Wales and Victoria.

Argentina produces a wheat with characteristics of both soft and hard wheat. Argentina's average wheat production amounted to 15.2 million tons for the 1997-2001 period.

## **Wheat Consumption and Imports**

Different wheat classes have their preferred uses. Hard wheat flour has excellent bread baking properties; soft wheat flour is well-suited for cakes, cookies, and Asian noodles; and durum wheat is used for pasta products and couscous. However, since different types of wheat can be blended to produce flours with certain characteristics, some substitution among wheat classes is possible in flour milling.

Although wheat is used primarily for human consumption, it is also an excellent feed grain for poultry and livestock. Feed use of wheat tends to be highly variable and depends on the quality of the wheat crop and on the price relationship between wheat and other feed grains. Generally, only lower quality wheat is used for feed, and differences among wheat classes are not important for feeding purposes. Wheat is a differentiated product only for human consumption.

Major importing countries or regions include Algeria, Brazil, China, Egypt, Japan, Mexico, Morocco, South Korea, Taiwan, Tunisia, and Venezuela (Table 2). Most of these importing countries use various types of barriers to restrict inflow of wheat to their countries. China had been the largest importer of wheat, followed by Brazil and Japan. However, China's wheat imports have been highly volatile, depending upon its domestic wheat production and import policies. China recently reduced wheat imports substantially, from 12.0 million tons in 1995 to 1.1 million tons in 2001.

Trade flows of wheat from exporting countries to importing countries are shown in Figure 1. The EU and the United States are major exporters of wheat, but they also import considerable amounts of wheat. The United States imports wheat from Canada, while the EU imports wheat from the United States, Canada, Argentina, and Australia.

Table 2. Wheat Imports by Country, 1997-2001 Average Imports

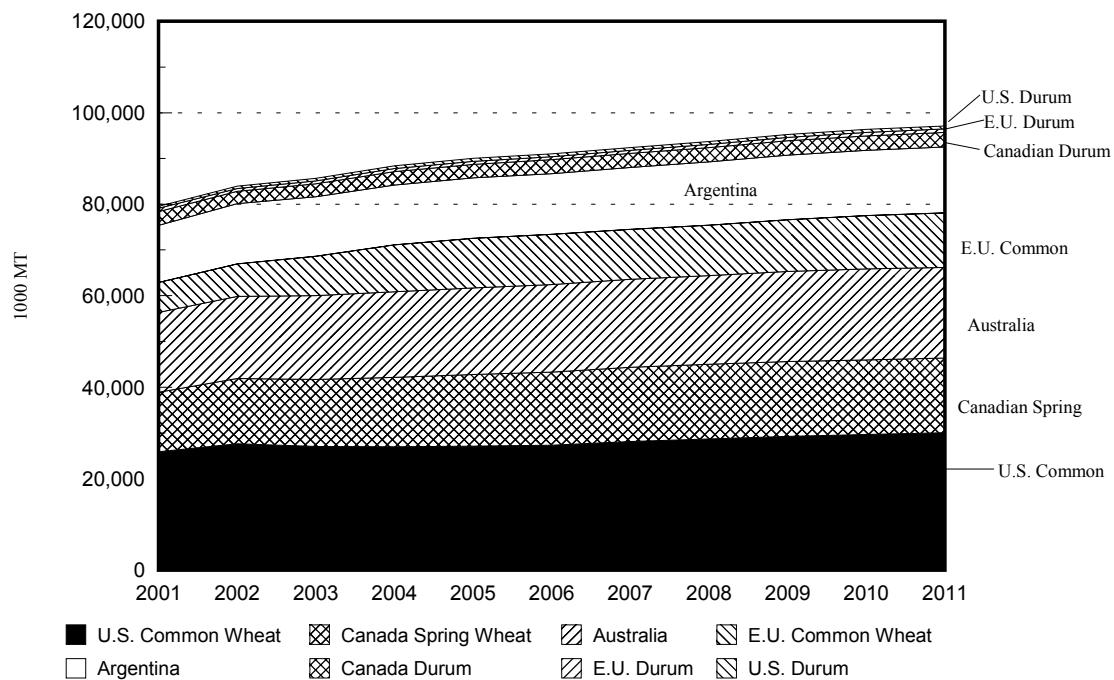

Figure 1. World Wheat Trade, 2001 to 2011

## **Wheat Exports**

The major wheat exporting countries, the United States, Canada, the EU, the FSU, Australia, and Argentina, supply approximately 70% of the wheat traded in the world market. The United States is the largest exporter, followed by Canada and Australia (Table 3). The United States leads in exports of HRW and SRW wheats; an annual average of 27.2 million metric tons of all wheat were exported in 1997-2001, of which 16.7 million metric tons were HRW, and 8.2 million metric tons were HRS. The United States competes with the EU for market share of SRW wheat exports. Major U.S. markets for SRW wheat include China, West Asia, and the North African markets. EU markets for SRW wheat include China, West Asia, and North African markets.

Canada is the leader in exports of HRS and durum wheat. The United States also exports HRS and durum wheat and competes with Canada. The EU competes with the United States and Canada for market share of durum wheat exports. Major U.S. markets for HRS wheat include Southeast Asia and East Asia, including Japan and South Korea. Major Canadian markets for HRS wheat include China and the East Asian markets. The United States, Canada, and the EU compete intensely for the North African durum markets.

Australia and Argentina compete with the United States in exporting HRW wheat. Major U.S. markets for HRW wheat include China and East Asia. Argentina exports HRW wheat mainly to South America and West Asia. Australia's major markets are the North African countries, China, and West Asia.

## OUTLOOK FOR THE WORLD WHEAT INDUSTRY

Total world wheat trade for the five major exporters is projected to increase 21.6% from 79.9 million metric tons in 2001 to 97.2 million metric tons in 2011 (Figure 1). Trade of all wheat classes is expected to increase for the 2001-2011 period. Durum wheat production in Canada is predicted to increase faster than in other countries.

The export price of U.S. common wheat is projected to increase by 17.3%, from \$3.30 per bushel in 2001 to \$3.87 per bushel in 2011 (Figure 2). The price of U.S. durum wheat is projected to increase 15.3%, from \$4.37 per bushel in 2001 to \$4.91 per bushel in 2011.

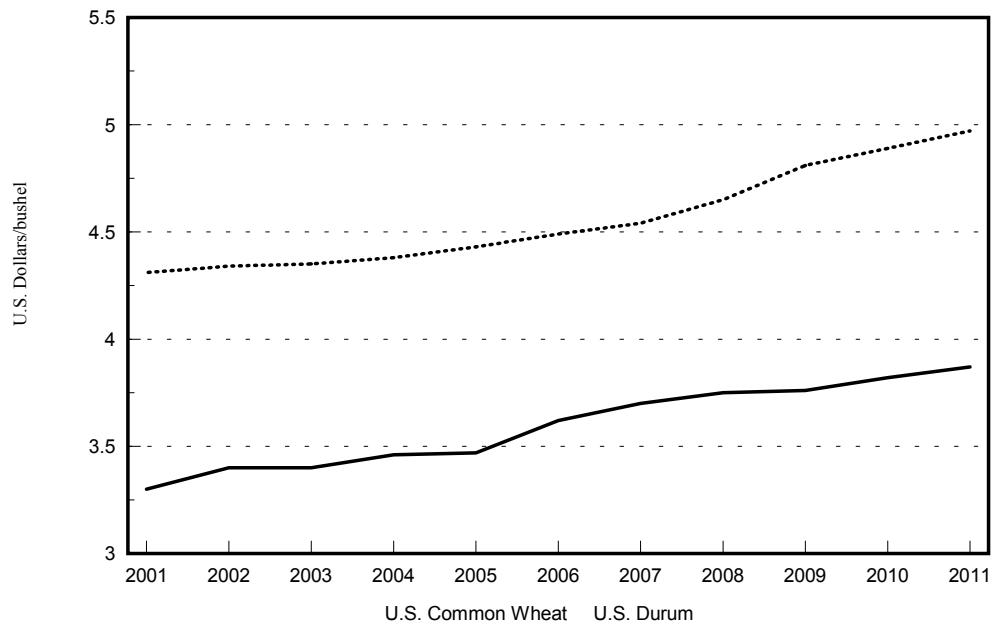

Figure 2. U.S. Wheat Export Prices, 2001 to 2011

## United States

Table 4 shows wheat production, consumption, exports, and ending stocks in the United States. Total U.S. wheat production is expected to grow 20.7% from 2001 to 2011. Production of HRW wheat in 2001 was significantly lower than the 1999-2001 three-year average. For the 2001-2011 period, the largest increases in production occur for U.S. HRW wheat (27.1%), followed by SRW wheat (15.0%), and durum (8.9%). U.S. white wheat production increases by only 1.3%. Changes in production of different classes of wheat over the 2001-2011 period are shown in Figure 3. For all classes of wheat, production is expected to increase throughout the forecast period.

**Table 4. Wheat Production, Consumption, Exports, and Carry-over Stocks in the United States**

	Average (1999-2001)	2001	2011	% Change (2001-2011)
-----thousand metric tons-----				
<b>Production</b>				
Common	61,019	57,526	69,419	20.7
HRW	27,974	23,032	29,273	27.1
HRS	13,038	13,672	15,719	15.0
SRW	12,406	12,831	12,934	0.8
White	7,689	8,244	8,351	1.3
Durum	3,176	2,986	3,253	8.9
<b>Consumption</b>				
Common	33,035	31,777	35,945	13.1
Durum	2,168	2,463	2,597	5.4
<b>Exports</b>				
Common	27,627	25,857	30,049	16.2
Durum	606	408	651	59.3
<b>Carry-over</b>				
Common	18,812	27,490	14,088	-48.8
Durum	1,118	768	664	-13.5

Total wheat harvested area is expected to increase from 48.7 million acres in 2001 to 57.2 million acres in 2011, and average yield is predicted to increase from 40.2 bushels per acre to 44.6 bushels per acre. Hard red spring wheat area is predicted to increase 1.6 million acres, and U.S. durum area is expected increase 0.8 million acres.

Common wheat consumption is expected to grow faster than durum wheat consumption. U.S. wheat consumption is projected to grow 13.1% for common food and feed wheat and 5.4% for U.S. durum wheat for the 2001-2011 period (Figure 4).

U.S. durum exports are projected to increase 59.3% from 408 thousand metric tons in 2001 to 651 thousand metric tons in 2011, which is only 7.4% higher than the 3-year average export from 1999 to 2001. Common wheat exports are predicted to increase gradually from 25.9 million metric tons in 2001 to 30.0 million metric tons in 2011 (Figure 5).

Ending stocks are expected to decrease for both common and durum wheat. Total ending stocks for common wheat are predicted to decrease 19.5% for the 2001-2011 period and decrease 13.5% for durum wheat (Figure 6).

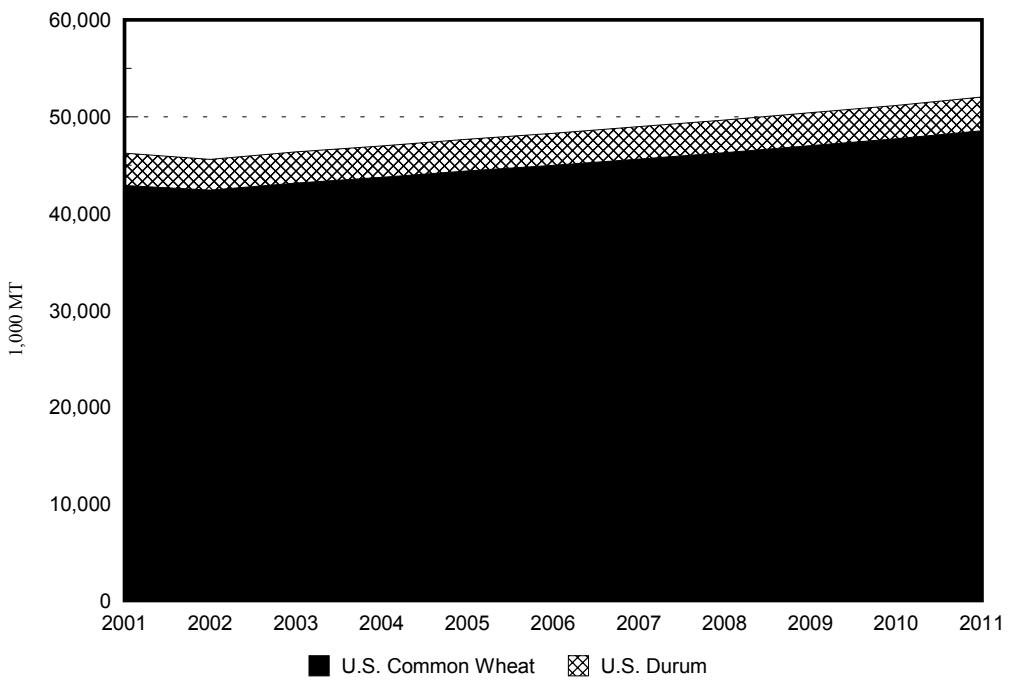

Figure 4. U.S. Domestic Wheat Consumption, 2001-2011

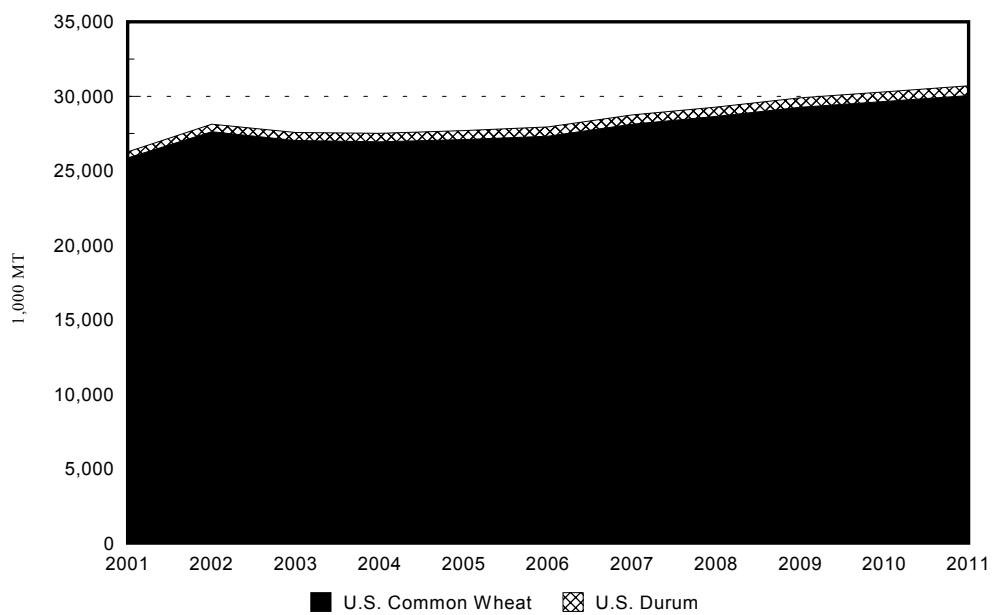

Figure 5. U.S. Wheat Exports, 2001 to 2011

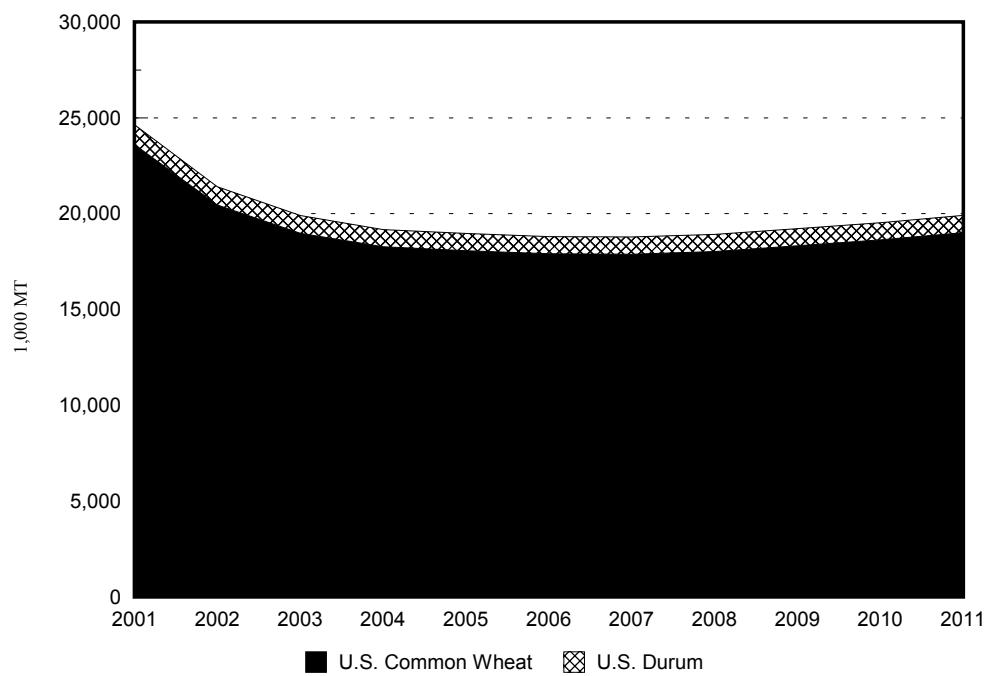

Figure 6. U.S. Wheat Ending Stocks, 2001 to 2011

## Canada

The production and consumption of CWRS wheat in 2001 are expected to be smaller than the 3-year averages (Table 5). Canadian WRS and WAD wheat production is predicted to increase 31.3% and 69.0%, respectively, for the 2001-2011 period; however, increases from the 3-year averages are much smaller. Total area for WRS wheat is expected to increase from 8.7 million hectares in 2001 to 10.0 million hectares in 2011, while WAD wheat area is expected to increase from 1.2 million hectares in 2001 to 1.7 million hectares in 2011.

Domestic consumption of WRS and WAD wheat is predicted to increase 18.8% and 7.2%, respectively, for the 2001-2011 period. Canadian WRS wheat exports are projected to increase 25.3% by 2011, and WAD wheat exports are predicted to increase 6.2% from 3.0 million metric tons in 2001 to 3.2 million metric tons in 2011.

Ending stocks are predicted to increase 26.7% for WRS wheat and increase 6.3% for WAD wheat for the 2001-2011 period.

**Table 5. Wheat Production, Consumption, Exports, and Carry-over Stocks in Canada**

	Average (1999-2001)	2001	2011	% Change (2001-2011)
-----thousand metric tons-----				
<b>Production</b>				
WRS	21,568	18,705	24,555	31.3
WAD	3,150	2,580	4,360	69.0
<b>Consumption</b>				
WRS	7,703	7,241	8,599	18.8
WAD	1,079	1,090	1,168	7.2
<b>Exports</b>				
WRS	9,919	13,000	16,291	25.3
WAD	3,042	3,000	3,186	6.2
<b>Carry-over</b>				
WRS	5,780	5,200	6,586	26.7
WAD	1,281	1,100	1,169	6.3

Figure 7 shows changes in production, consumption, exports, and ending stocks of WRS wheat in Canada from 2001 to 2011, and Figure 8 shows those for WAD wheat. Consumption of WRS and WAD wheat increase gradually throughout the period.

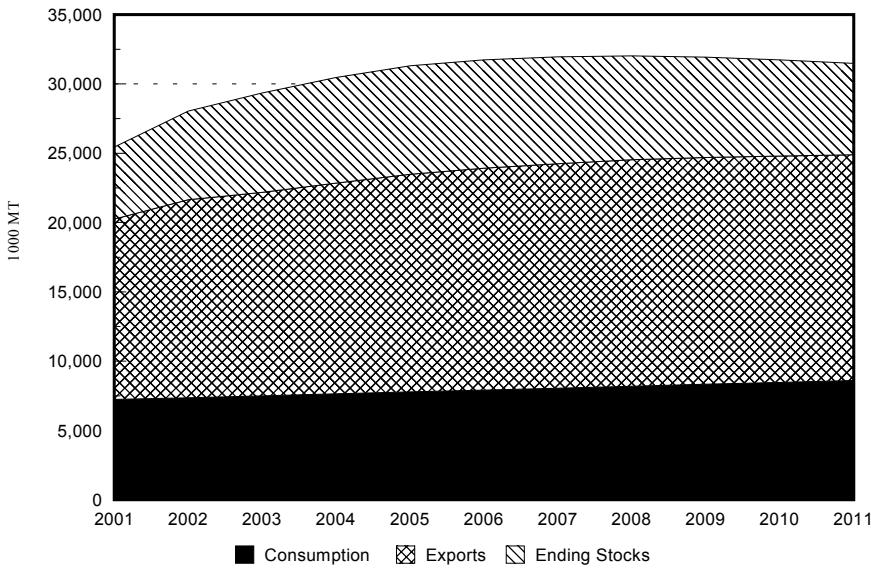

Figure 7. Canadian Western Red Spring Wheat Production and Utilization, 2001 to 2011

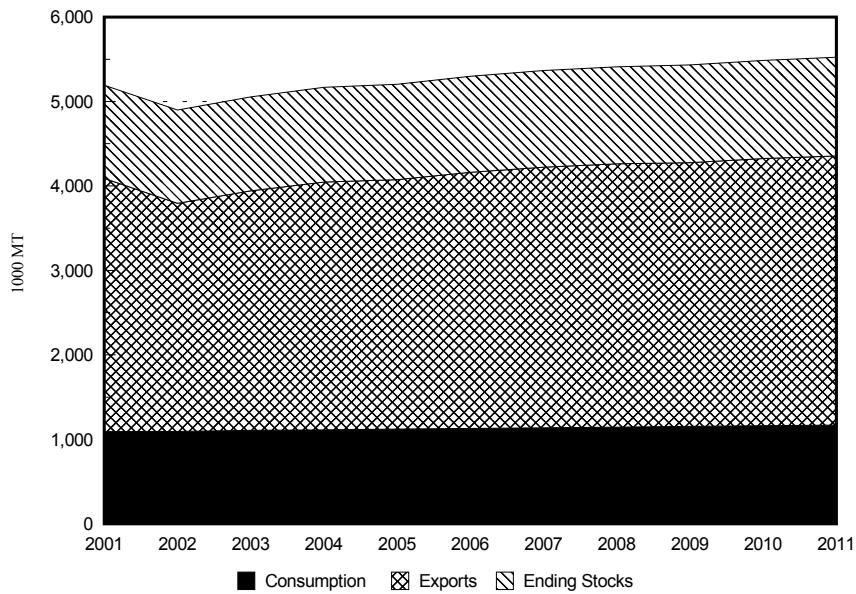

Figure 8. Canadian Western Amber Durum Wheat Production and Utilization, 2001 to 2011

## European Union

Table 6 presents production, consumption, exports, and ending stocks of common and durum wheat in the EU for the 2001-2011 period. Common wheat production in the EU is predicted to increase 9.9% from 2001 to 2011, while durum wheat production is expected to increase 14.3%.

Domestic consumption of common wheat is projected to decrease 2.0% from 82.0 million metric tons in 2001 to 80.4 million metric tons in 2011, and consumption of durum wheat is predicted to increase for the period. Exports of both wheat classes are predicted to increase,

82.6% for common wheat and 9.3% for durum wheat, for the 2001-2011 period, but exports of common wheat in 2011 are only 6.6% larger than the 3-year average. Ending stocks are expected to increase for both classes.

Table 6. Wheat Production, Consumption, Exports, and Carry-over Stocks in the European Union

	Average (1999-2001)	2001	2011	% Change (2001-2011)
-----thousand metric tons-----				
<u>Production</u>				
Common	87,173	84,105	92,425	9.9
Durum	8,426	7,830	8,946	14.3
<u>Consumption</u>				
Common	78,547	82,000	80,377	-2.0
Durum	7,775	7,400	8,128	9.8
<u>Exports</u>				
Common	11,236	6,561	11,980	82.6
Durum	793	730	798	9.3
<u>Carry-over</u>				
Common	12,985	10,000	14,392	43.9
Durum	1,400	1,200	1,622	35.2

Figures 9 and 10 show changes in consumption, exports, and ending stocks of common and durum wheat for the 2001-2011 period. For common wheat, production, exports, and ending stocks are expected to increase. Production, consumption, exports, and ending stocks of durum wheat are predicted to increase for the period.

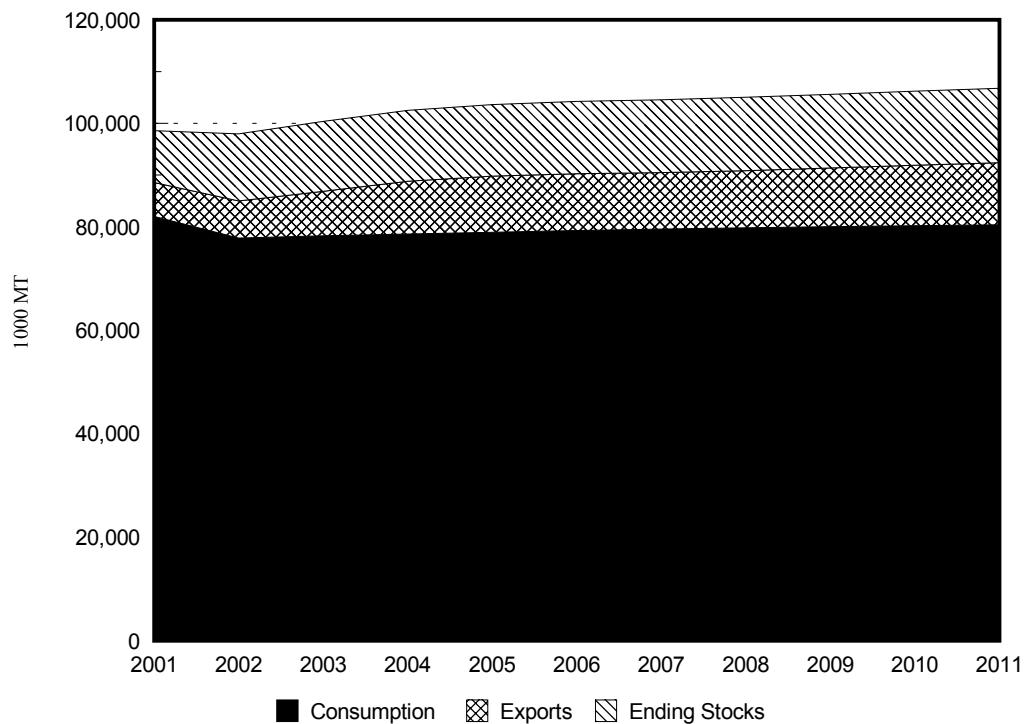

Figure 9. E.U. Common Wheat Production and Utilization, 2001 to 2011

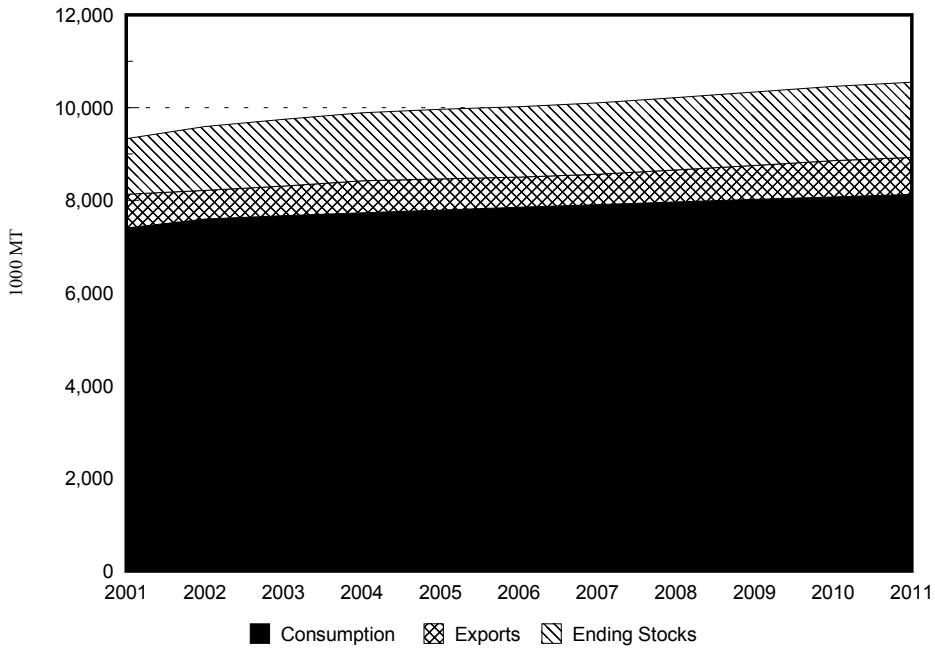

Figure 10. E.U. Durum Wheat Production and Utilization, 2001 to 2011

## Australia

Australia's wheat production is projected to grow 16.1% over the 2001-2011 period (Table 7). Yields are expected to increase gradually at the historical trend line, while wheat area is expected to increase 9.6%. Domestic wheat consumption is predicted to increase 7.4% from 5.5 million metric tons in 2001 to 5.9 million metric tons in 2011. Wheat exports also are predicted to increase from 17.4 million metric tons in 2001 to 19.8 million metric tons in 2011. Figure 11 shows changes in consumption, exports, and ending stocks for the 2001-2011 period.

**Table 7. Wheat Production, Consumption, Exports, and Carry-over Stocks in Australia**

	Average (1999-2001)	2001	2011	% Change (2001-2011)
-----thousand metric tons-----				
Production	23,508	22,000	25,540	16.1
Consumption	5,866	5,500	5,906	7.4
Exports	17,038	17,450	19,829	13.6
Carry-over	3,974	3,679	2,295	-37.6

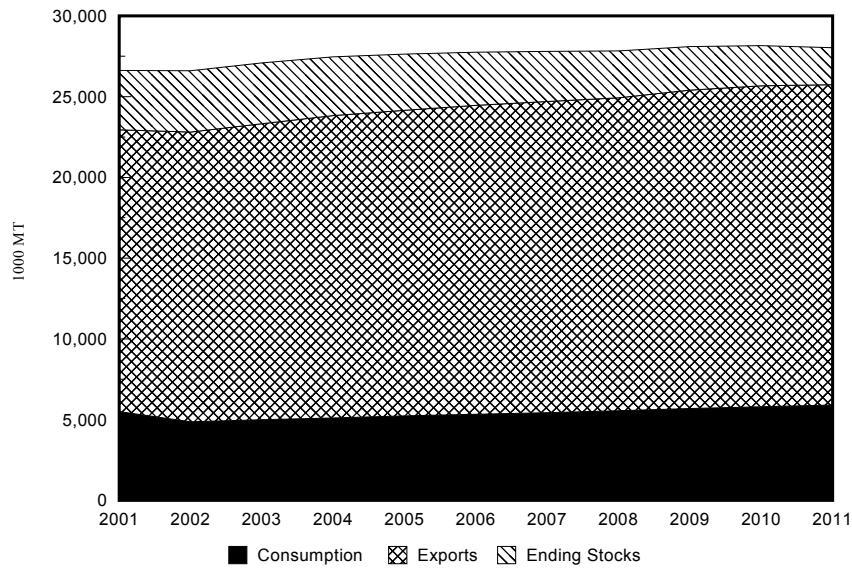

Figure 11. Australia Common Wheat Production and Utilization, 2001 to 2011

## Argentina

Argentine wheat production is projected to increase 5.0% from 15.7 million metric tons in 2001 to 16.4 million metric tons in 2011 (Table 8). Domestic wheat consumption is expected to increase 1.8% from 4.1 million metric tons to 4.2 million metric tons. Wheat exports are predicted to increase from 11.6 million metric tons in 2001 to 12.5 million metric tons in 2011, a 7.8% increase. Ending stocks also are expected to increase 50.0%. Figure 12 shows changes in consumption, exports, and ending stocks for the 2001-2011 period.

**Table 8. Wheat Production, Consumption, Exports, and Carry-over Stocks in Argentina**

	Average (1999-2001)	2001	% Change 2011	% Change (2001-2011)
-----thousand metric tons-----				
Production	16,221	15,690	16,482	5.0
Consumption	4,275	4,125	4,200	1.8
Exports	11,908	11,575	12,475	7.8
Carry-over	458	300	450	50.0

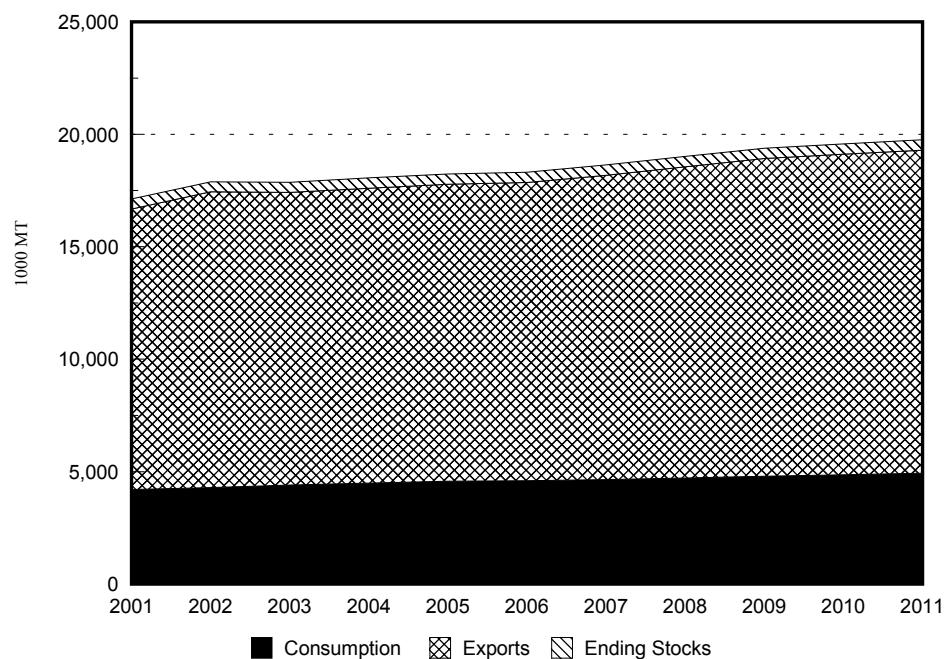

Figure 12. Argentina Common Wheat Production and Utilization, 2001 to 2011

## Former Soviet Union

The FSU became an exporter of wheat in 2001 and is projected to continue exporting wheat. In 2001, the FSU exported 4.3 million metric tons of wheat. By 2011, exports will be 4.7 million metric tons (Figure 13).

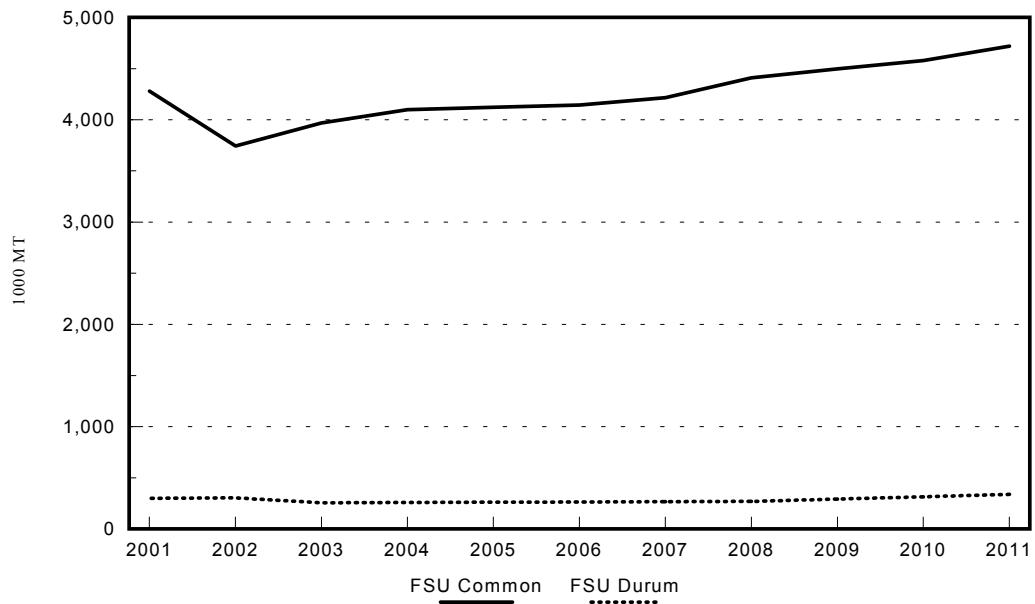

Figure 13. Common and Durum Wheat Exports by Former Soviet Union, 2001 to 2011

## Importing Countries

Importing countries are grouped into the Asian region (China, Japan, Korea, and Taiwan), the African region (Algeria, Egypt, Morocco, and Tunisia), and Latin America (Mexico, Brazil, and Venezuela) (Table 9).

Table 9. Imports of Common and Durum Wheat by Major Importing Countries

Wheat Class	Average (1999-2001)	2001	2011	% Change (2001-2011)
-----thousand metric tons-----				
<u>Asia</u>				
China	786	1,085	4,880	349.8
Korea	3,746	4,300	4,774	11.0
Japan	5,890	5,800	6,330	9.1
Taiwan	1,063	1,000	1,388	38.8
<u>North Africa</u>				
Algeria				
Common	2,650	2,300	2,707	17.7
Durum	2,300	2,200	2,660	20.9
Morocco	3,097	2,730	3,981	45.8
Egypt	5,941	5,800	7,057	21.7
Tunisia				
Common	1,066	1,238	1,087	-12.2
Durum	429	462	533	15.4
<u>Latin America</u>				
Brazil	7,085	6,500	7,736	19.0
Mexico	2,430	2,700	3,112	15.3
Venezuela				
Common	1,025	1,035	1,221	18.0
Durum	368	365	410	12.3

## Asian Importers

Asian imports of wheat are projected to increase 42.6% between 2001 and 2011. Chinese imports of common wheat are projected to increase 349.8%, from 1.1 million metric tons to 4.9 million metric tons, for the 2001-2011 period. China's increase is due to reduced tariffs on wheat based on its trade negotiations with the United States and the EU for its membership in the World Trade Organization. Japan, Korea, and Taiwan imports are projected to increase 9.1%, 11.0%, and 38.8%, respectively, for the 2001-2011 period (Figure 14).

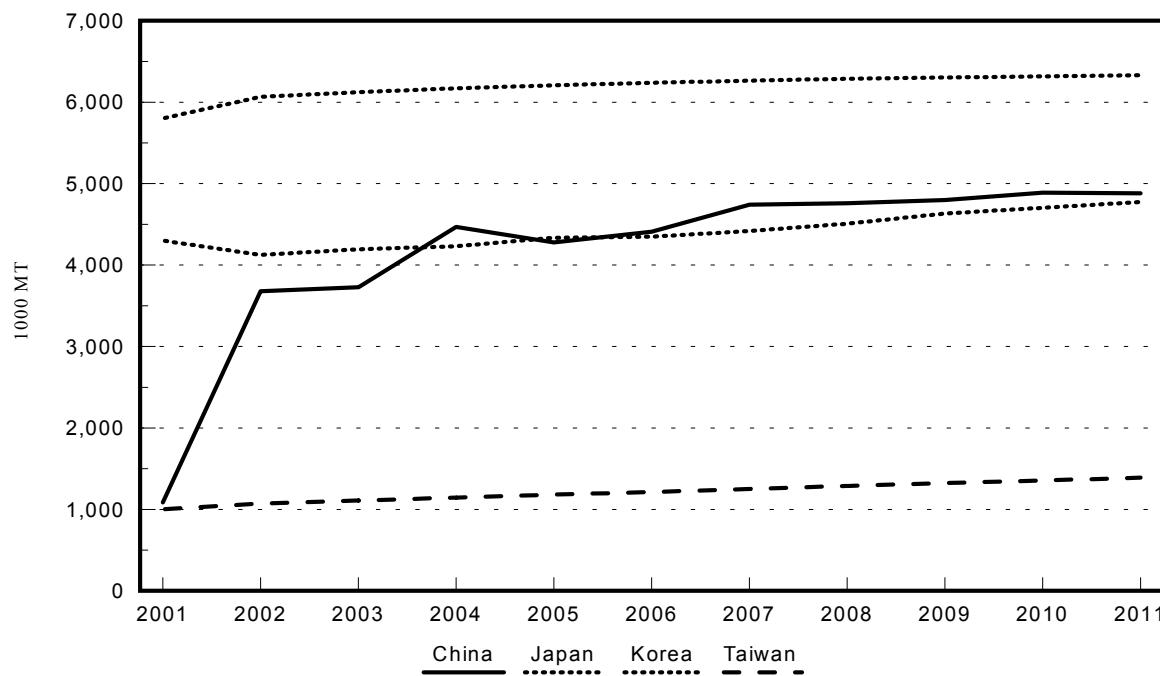

Figure 14. Common Wheat Imports by Major Asian Countries, 2001 to 2011

## African Region

North African imports of wheat are projected to increase 21.1% between 2001 and 2011. Egyptian imports of common wheat are projected to increase 21.7%, from 5.8 million metric tons to 7.1 million metric tons, between 2001 and 2011. Algeria is expected to import both common wheat and durum wheat. Algerian imports of common wheat are projected to increase 17.7% from 2.3 million metric tons in 2001 to 2.7 million metric tons in 2011, and durum wheat imports are projected to increase 20.9% from 2.2 million metric tons to 2.7 million metric tons. Morocco's imports of common wheat are projected to increase 45.8% from 2.7 million metric tons to 4.0 million metric tons. Tunisian imports of common wheat are projected to decrease 12.2%, from 1.2 million metric tons to 1.0 million metric tons, between 2001 and 2011. Its durum wheat imports are projected to increase 15.4% between 2001 and 2011 (Figure 15).

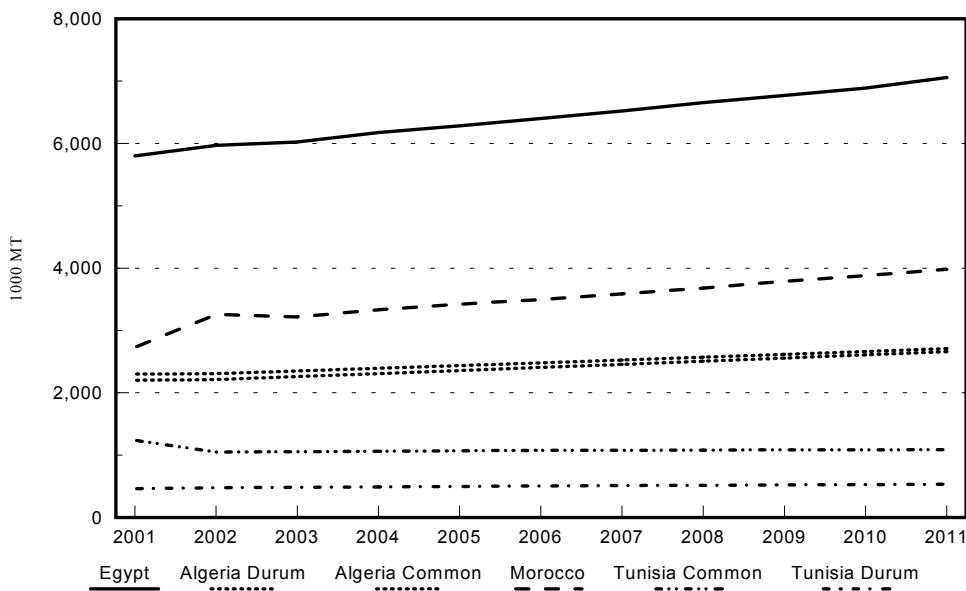

Figure 15. Common and Durum Wheat Imports by Major African Countries, 2001 to 2011

### Latin America

Mexican imports are projected to increase 15.3% from 2.7 million metric tons in 2001 to 3.1 million metric tons in 2011. Venezuela is expected to import more common and durum wheat. Common wheat imports are projected to increase 18.0% from 1.0 million metric tons in 2001 to 1.2 million metric tons in 2011, and durum wheat imports are projected to increase 12.3% (Figure 16). Brazilian imports are projected to increase 19.0% from 6.5 million metric tons in 2001 to 7.7 million metric tons in 2011.

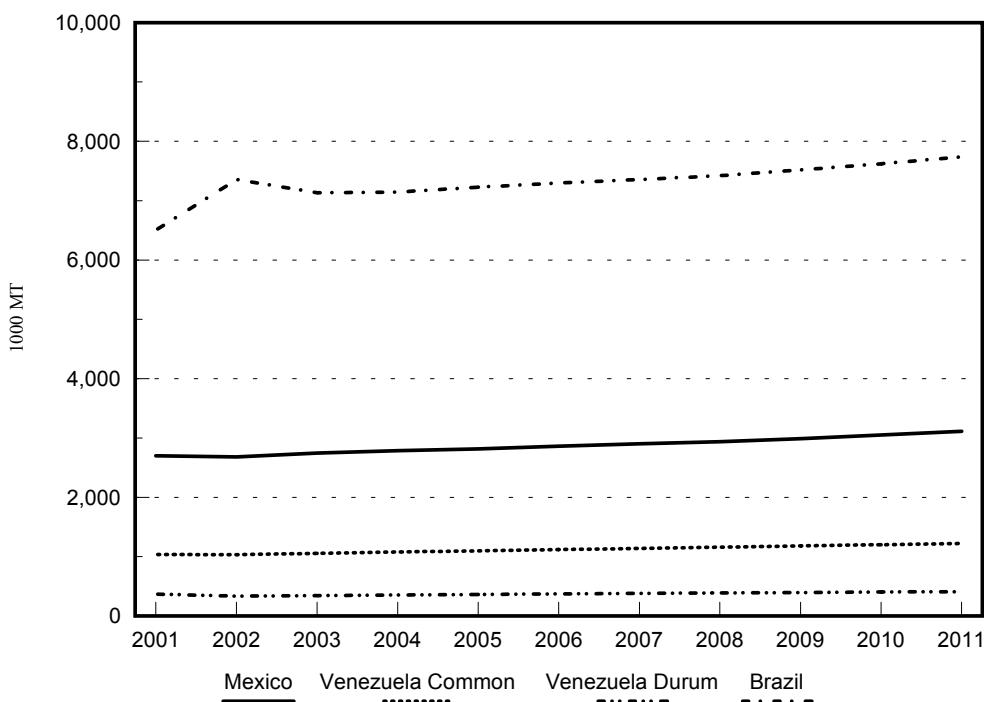

Figure 16. Common and Durum Wheat Imports by Latin American Countries, 2001 to 2011

## CONCLUDING REMARKS

This report evaluates the U.S. and world wheat industries for the 2001-2011 period by using the Global Wheat Policy Simulation Model, which is operational at North Dakota State University. The baseline projections are based on a series of assumptions about the general economy, agricultural policies, weather conditions, and technological changes.

Prices for both common wheat and durum wheat are predicted to increase for the 2001-2011 period. World wheat trade for the five major exporters is projected to increase 21.6% from 79.9 million metric tons in 2001 to 97.3 million metric tons in 2011. Durum wheat trade is expected to grow faster than common wheat trade. Because of the financial crisis in South America and Southeast Asian countries, their import demand for common wheat is expected to be weak for the next few years, but it is expected to recover later in the forecast period.

All exporting countries are predicted to increase their production and exports of common wheat for the 2001-2011 period. World consumption of common wheat is expected to increase faster than world production, resulting in a gradual increase in the world price of common wheat. Production and exports of common wheat in the EU are predicted to grow slower than those in other exporting countries. Production of common wheat in the United States is predicted to grow faster than in other exporting countries.

Common wheat demand in Southeast Asian countries is predicted to grow for the 2001-2011 period. China's imports of common wheat are expected to grow faster than other countries in the region.

The FSU is predicted to remain an exporter of common wheat for the 2001-2011 period. The region may increase its domestic production of common wheat substantially for the forecasting period.

Egypt, the largest importer of common wheat in the North Africa region, is predicted to increase its imports of common wheat. Import demand for both common and durum wheat in other countries in the region is also expected to increase.

Import demand for common wheat in Brazil, Venezuela, and Mexico is expected to be strong for the 2001-2011 period. Import demand for durum wheat in Venezuela is also predicted to be strong for the forecasting period.
