Co-authors:

Benjamin Leard; Joshua Linn;

Virginia McConnell (RFF)

## Policy Targets (EPA & NHTSA)

Model Year 2014-2018 (Phase 1),

reduction in fuel consumption:

- Combination trucks: 20%
- Vocational vehicles: 10%

Model Year 2018 - 2027 (Phase 2)

- Combination trucks: 24%
- Vocational vehicles: 16%

## Research Question:

**Can we achieve the targets? How?**

- Estimate the dynamic baseline of MPG improvement
- Estimate the trade-off between MPG and truck attributes

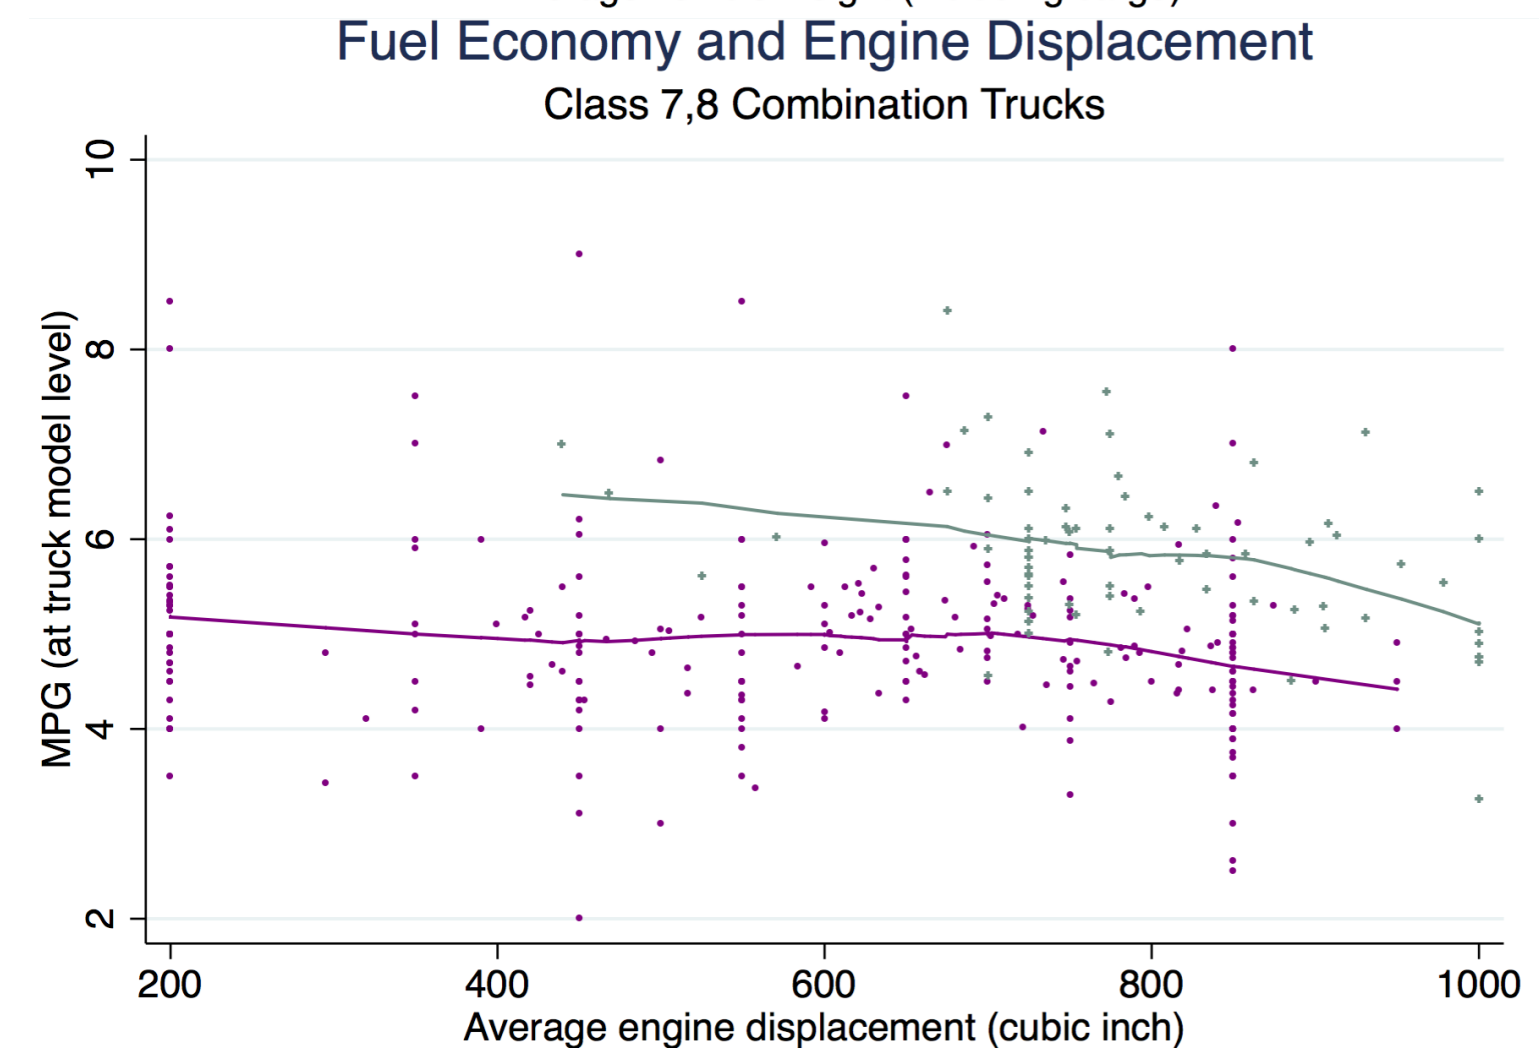

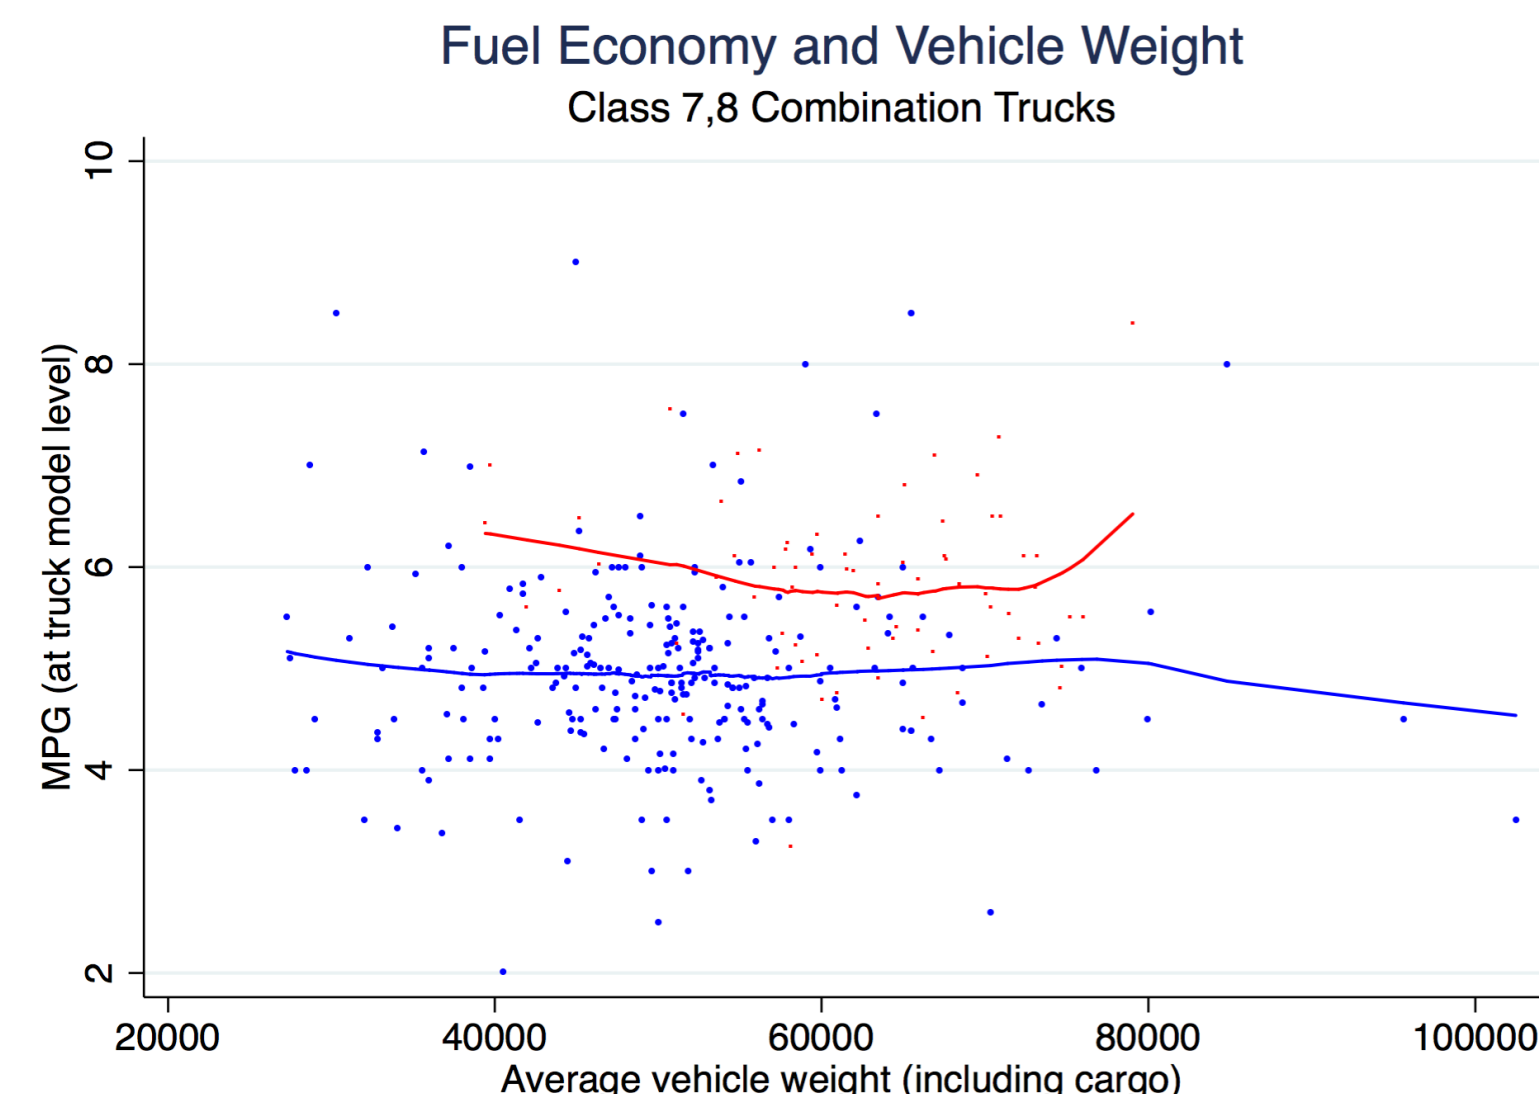

## Data:

- U.S. Vehicle Inventory and Use Survey (1982-2002)
- Truck-level micro data

## Method:

- OLS Estimation with Fixed Effects
- Oaxaca-Blinder Decomposition

## Graphical Evidence

## Empirical Evidence

$$\ln MPG_i = \alpha_1 \ln Weight_i + \alpha_2 \ln CID_i + \mathbf{MY}_i' \gamma + \mathbf{X}' \beta + \varepsilon_i$$

	Main (OLS)	Aggregate <sup>^</sup>	Oaxaca
Base Year	1973	1973	1973-75
Total tech progress	30.87%	25.11%	29.93%
Annual Rate	0.93%	0.78%	0.97%
<b>Predict in 10 yrs</b>	<b>8.71%</b>	<b>7.20%</b>	<b>9.12%</b>
<b>Phase 2 target</b>	<b>31.52%</b>		
<i>Trade-off coefficients</i>			
Vehicle Weight	-0.105***	-0.147***	-
Engine Displacement	-0.0148***	-0.0197***	-
No. of Observations	99,426	11,789	-
R-squared	0.202	0.534	-

Note: <sup>^</sup> Data are aggregated by fuel type, model year, body/trailer type, and vehicle make. Probability weight is considered.  
Main OLS and Oaxaca estimations control for fuel type, primary cargo, body/trailer type, manufacturer FE, survey year FE, and region FE. Aggregate estimation controls for fuel type, body/trailer type, and manufacturer FE.
