The Economics of Farm Animal Welfare and Consumer Choice – Evidence from Australia

Wendy Umberger, Ph.D.

Director and Professor, Global Food Studies, University of Adelaide Jill Windle and John Rolfe (UQ), Lenka Malek (Uni Adelaide), Sven Anders (Uni Alberta)

> AARES 2016, 60th Annual Conference Hyatt Hotel, Canberra 2-5 February, 2016

> > seek LIGHT

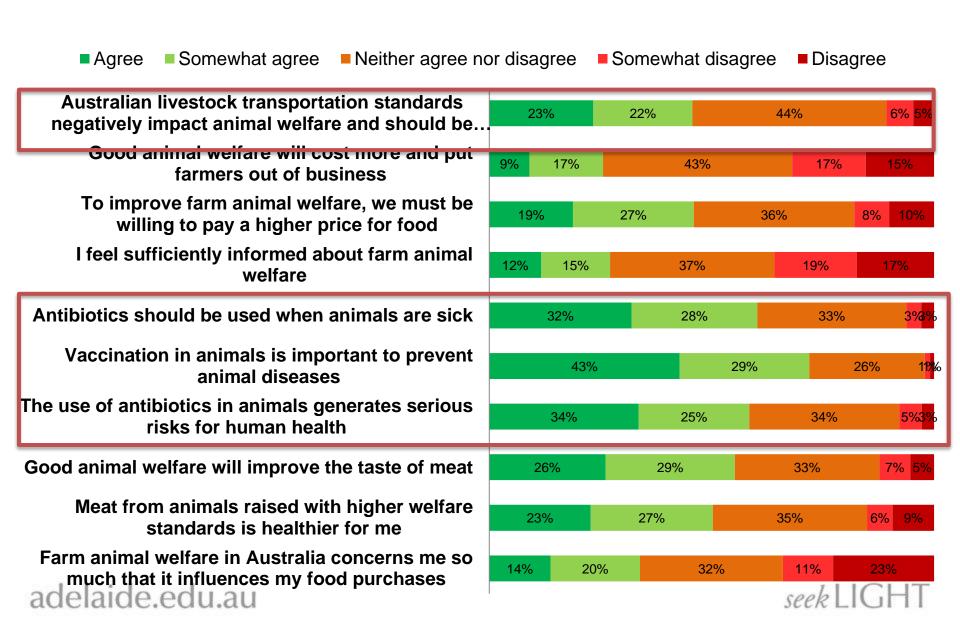

Background

- Public concerns over the welfare of farm animals have intensified globally
 - 2011 suspension of live cattle exports to Indonesia
 - cases of unethical treatment of farm animals
- Renewed societal interest in where our food comes from and how it is produced
- Need to quantify the extent of farm animal welfare concerns and value in the Australian consumer market

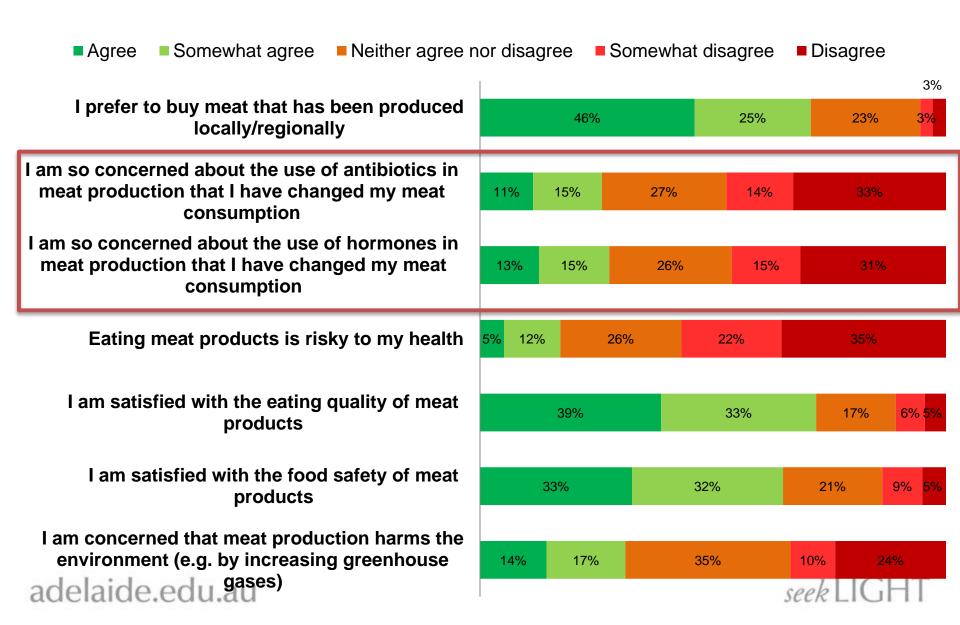

Study sample and data collection

- Nationally representative sample of 1009 Australian meat buyers
 - Surveyed Oct-Nov 2015
 - Recruited using online panel provider (Powerstats)
- Roy Morgan meat buyer data was used to set sample quotas for:
 - Age
 - Gender
 - Location (spread across states & city vs. country areas)
- Final sample matched Roy Morgan sample on above factors + education level, respondent income and employment.

Consumer attitudes about welfare issues

Consumer concerns

DCE Research Questions

- Are there significant preferences for credence claims across meat types?
- 2. How does willingness to pay (WTP) for farm animal welfare (FAW) compare to the value placed on other credence attributes?
- 3. Do preferences for the credence claims differ across meat types?
- 4. Are preferences influenced by consumption frequency?
- 5. Are preferences influenced by socio-demographic variables?

DCE Elicitation Method

- DCE "Part 4" of Survey
- Bayesian D-efficient experimental design generated 24 choice sets per meat type – divided into 6 blocks of 4 choice sets
- Respondents randomly allocated to one of the four meat types (based on consumption frequency)
 - Completed 4 choice sets in total
 - Asked to select most likely choice out of 4 meat options and a 'no-choice' option

Choice scenario:

Imagine you are shopping for fresh LAMB to be prepared and consumed at home for a typical main meal.

Please consider the following 4 options which <u>vary only by the factors shown in</u> the table.

Select the option that you would be most likely to choose.

Meat cuts

	Beef	Chic	ken	Por	k	Lan	nb
Mince	Your Preferred Beef Steak (Scotch or Porterhouse)	Breast Fillets	Thigh Fillets	Leg Roast	Loin Chops	Leg Roast	Loin Chops

Meat Attributes & Levels

Production method	Farm Animal welfare status	Organic status	Other claims	Other claims	Cost per kg
Beef & Lamb: Pasture-raised Chicken & Pork: Free Range	Certified Humane	Certified Organic	Antibiotic Free	No Added Hormones	4 levels per
Conventional	None (blank space)	None (blank space)	None (blank space)	None (blank space)	meat cut

Credence claims

	Option A	Option A Option B		Option D	Option E
Cut	Lamb Leg Roast	Lamb Loin Chops	Lamb Leg Roast	Lamb Loin Chops	
Price	\$7.99/kg	\$23.99/kg	\$9.59/kg	\$17.99/kg	
Production Method	Pasture-raised Pasture-raised		Conventional	Conventional	I would
Organic Status	Certified Organic		Certified Organic		not purchase any of
Farm Animal Welfare Status	Certified Humane		Certified Humane		these products
Other Claims	Antibiotic Free				
Other Claims	No Added Hormones			No Added Hormones	
I would choose	•	•	0	•	•

Overview of DCE Analysis

- Error Component Logit (ECL) models estimated for total sample and for each meat separately
 - ECL model is a variant of the mixed logit model
 - Accounts for panel nature of data and unobserved heterogeneity between respondents across the different attributes and alternatives (meat cuts)
- Marginal willingness-to-pay (WTP) estimates calculated using mean parameter coefficients
 - 95% confidence intervals estimated using Krinsky and Robb (1986) procedure
 - Statistically significant differences between WTP estimates identified using Poe et al. (2005) procedure

Q1. Are there significant preferences for credence claims across meat types?

	Coefficient	St error						
Randomised variables	Randomised variables							
Price	-0.307***	0.0150						
Meat Cut	0.418***	0.1152						
Production Method	0.490***	0.0482						
Certified Organic	0.439***	0.0548						
Certified Humane	0.525***	0.0525						
Antibiotic Free	0.412***	0.0536						
No Added Hormones	0.802***	0.0553						
Distribution of randor	nised variables							
Price	0.530***	0.033						
Meat Cut	2.623***	0.126						
Production Method	0.425***	0.127						
Certified Organic	0.704***	0.095						
Certified Humane	0.378***	0.152						
Antibiotic Free	0.472***	0.141						
No Added Hormones	0.510***	0.122						
Non randomised varia	bles							
ASC	-13.200***	1.388						
Chicken	3.753***	1.192						
Pork	0.291	1.067						
Lamb	1.248	1.080						
SigmaE01	8.091***	0.801						

Model statistics	
Observations (n)	4032 (1008)
Log Likelihood	-4572
Pseudo R-sqrd	0.295
AIC	2.277
Chi Sqrd	3834

Q2. Does WTP vary between farm animal welfare (FAW) and food safety attributes?

	WTP (95%CI)
Production Method	\$1.59 (1.17 - 2.10)
Certified Organic	\$1.43 (0.99 - 1.97)
Certified Humane	\$1.71 (1.25 - 2.26)
Antibiotic Free	\$1.34 (0.91 - 1.86)
No Added Hormones	\$2.61 (2.06 - 3.27)

WTP differences

- No Added Hormones > all other claims (P<0.01)
- Certified Humane > Antibiotic Free (P<0.01)
- Production method not significantly different to other claims
- Certified Organic not significantly different to other claims apart from No Added Hormones

Q3. Do preferences for the five credence claims differ across meat types?

Mean WTP (95% CI)

	Beef	Chicken	Pork	Lamb
Production	\$1.49	\$1.45	\$1.12	\$0.80
method	(\$0.70 - \$2.54)	(\$0.88 - \$2.28)	(\$0.32 - \$2.40)	(\$0.22 - \$1.70)
Organic	\$1.76 (\$0.96 - \$2.84)	\$1.03 (\$0.45 - \$1.86)	\$0.75 (\$0.10 - \$1.80)	\$0.52 (-\$0.13 - \$1.51)
Humane	\$1.53 (\$0.68 - \$2.66)	\$0.98 (\$0.44 - \$1.77)	\$2.01 (\$1.03 - \$3.58)	\$1.09 (\$0.39 - \$2.16)
Antibiotic Free	\$1.49 (\$0.68 - \$2.57)	\$0.99 (\$0.44 - \$1.79)	\$1.35 (\$0.54 - \$2.64)	\$0.52 (-\$0.10 - \$1.48)
No Added	\$2.47	\$1.79	\$2.52	\$1.72
Hormones	(\$1.46 - \$3.83)	(\$1.10 - \$2.81)	(\$1.46 - \$4.23)	(\$0.96 - \$2.91)

WTP differences (P<0.05)

- Organic Beef > Organic Chicken, Pork or Lamb
- Free Range Chicken > Pasture Fed Lamb

- Humane Pork > Humane Chicken
- Antibiotic Free Beef > Antibiotic Free Lamb

Q5. Are preferences influenced by consumption frequency?

- Coding: 0 = cheaper cut, 1 = more expensive cut
- Consumption frequency categories:
 - Daily, At least once per week, Fortnightly, Monthly, < Once per month, Never
 - Converted to continuous variable for analysis
- No significant interactions in full sample model or beef model

	Chicken		Pork		Lamb	
Cut	0	1	0	1	0	1
	Breast	Thigh	Roast	Chop	Roast	Chop
Production method	-	+ve**	-ve*	-ve**	-	-
Certified Organic	-	-	-	-	-ve**	-ve*
Certified Humane	-	-	-	-	-ve***	-
Antibiotic Free	-	-	-	-	-	-
No Added Hormones	-	-	-	-	-	-

Q6. Are preferences for the credence claims influenced by socio-demographic variables?

Certified Humane

Less likely to select than females

No Added Hormones

than younger respondents

Certified Organic

Higher than average income

More likely to select than respondents with lower than average income

Not significant (P>0.10)

Retired, university education, age < 30 and < 50, metropolitan or urban area, primary shopper

Summary

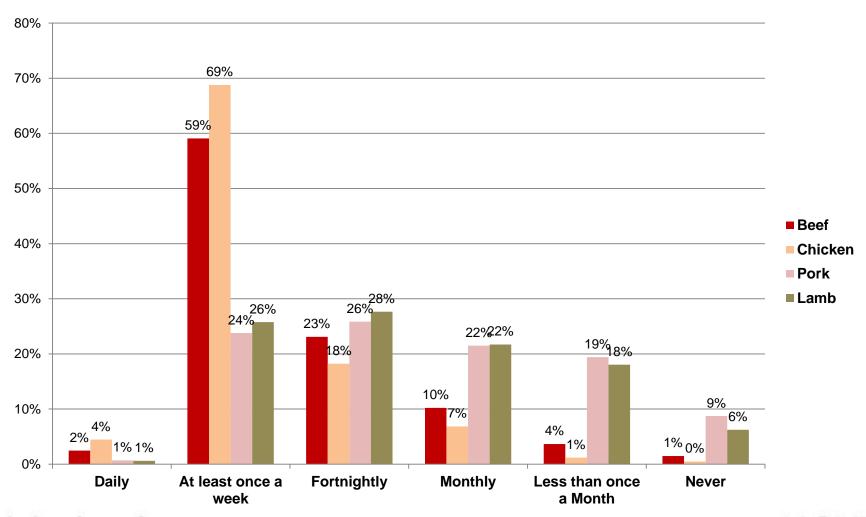

- Presence of credence claims has a positive impact on choice
- Highest value for "No Added Hormones"
- "Certified Humane" is valued more than "Antibiotic Free"
- Values for credence attributes vary across species of meat
- Further work needed to understand implications

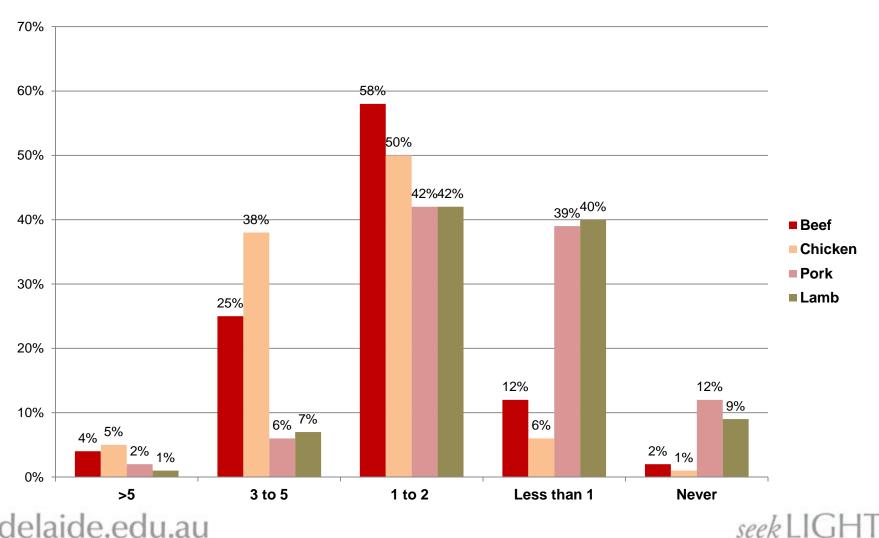

Thank you!
