RICE DATA BOOK

by

CTAP Staff

CTAP Staff Report No. 2
January 1985

Prepared by

R. Thamodaran, Model Research and Development Coordinator
Anisossadat Bahrenian, Data Book Coordinator
Duane Schouten, Data Base Manager
Randy Hager, Rice Specialist
Jess Robinson, Computer Support Manager
Patrick Westhoff, Editor
William H. Meyers, Professor-in-Charge

Data Source

Original data were obtained from the OASIS Databank, World Analysis Branch, International Economics Division, Economic Research Service, U.S.D.A. Data were adjusted in some regions and years to maintain consistency between ending stocks and beginning stocks and between supply and demand. Data are on a crop year basis for the respective regions. In the tables, a "." indicates missing data.

Annotated Index - Rice

<u>Country or Region*</u>	<u>Page</u>
United States	11
Production tripled with equal contributions from area and yield increases. Domestic consumption doubled over the period. Exports tripled by 1980, but declined thereafter resulting in increased stocks.	
Canada	15
Consumption, totally met by imports, doubled over the last two decades.	
Brazil	17
Production increased about 50 percent over the period, explained almost totally by increases in area. Domestic demand approximated domestic supply, with limited exports in years prior to 1977 and limited imports in later years.	
Argentina	19
Production almost tripled during the 60's, explained partly by a doubling in area and partly by yield increases. While area remained more or less unchanged thereafter, yields declined steadily to levels of the early 60's, resulting in a corresponding decline in production. Consumption doubled during the 60's but declined thereafter. Exports, which accounted for 10-30 percent of production in the early 60's, grew to 40-45 percent by the early 80's.	
Mexico	21
Production doubled between 1960 and 1975 and declined thereafter, with similar trends in both area and yield. Domestic consumption approximately equalled production, with years of slight deficits (imports) or surpluses (exports).	
Venezuela	23
Area increased five-fold while yield doubled, resulting in a ten-fold increase in production. Consumption and stocks also increased at a similar pace. Foreign trade was limited, although there were some exports between 1965 and 1975.	
Central America & Caribbean Islands	25
Area increased by 50 percent while yield more than doubled, resulting in a tripling of production. Domestic consumption increased by 150 percent while beginning stocks doubled. Net imports accounted for 20 to 25 percent of consumption during this period.	

* Regional definitions are found on page 6.

<u>Country or Region</u>	<u>Page</u>
Other South America	27
Production tripled due to increases in both yield and area. Consumption and net exports also tripled during the period.	
Egypt	29
Production doubled by the early 70's and declined slightly thereafter. Area doubled by the late 60's and then declined, while productivity peaked in the early 60's, declined until the mid 70's and then increased again. Domestic consumption doubled over the period. Almost 40 percent of production was exported in the late 60's; but by the early 80's, the country was barely self-sufficient.	
High Income North Africa & Middle East	31
Production doubled, almost entirely due to productivity increases. Consumption, which exceeded production by about 30 percent in the early 60's, increased by well over 300 percent. This, together with substantial stock increases, resulted in an almost ten-fold increase in imports.	
Other Low Income North Africa & Middle East	35
Production increased by about 80 percent due, almost entirely, to area increases. Domestic consumption doubled, and imports almost tripled.	
Republic of South Africa	37
Consumption, entirely met by imports, almost tripled over the period.	
Other South Africa	39
Production and consumption were negligible, and no imports were recorded.	
Central Africa	41
Production doubled, almost entirely due to an increase in area. Consumption tripled, and imports increased six-fold. Imports provided one-fourth of domestic consumption at the beginning of the period, and nearly one-half at the end.	
East Africa	45
Production increased by 50 percent, resulting from a similar increase in area. The slight increases in productivity attained during the late 60's were not sustained. Modest exports occurred in the early 60's, but with a doubling in demand over the period,	

<u>Country or Region</u>	<u>Page</u>
imports accounted for 20-25 percent of consumption by the early 80's.	
People's Republic of China	47
Production doubled, almost entirely due to productivity increases. Consumption also doubled. Exports increased until the early 70's and declined thereafter. Trade remained negligible relative to total production throughout the period.	
Japan	51
Area steadily decreased. Production rose sharply in '67 and '68, due to higher yields, but then steadily declined. Consumption declined slightly over the period. A net importer during most of the 60's, the country exported small quantities of surplus during the 70's.	
India	55
A 35 percent increase in production was due to equal contributions from area and yield increases. Consumption, which marginally exceeded production in the 60's, increased more slowly than production, resulting in small net exports during the late 70's.	
Other South Asia	59
Production increased 30 percent due to both area and productivity increases. Consumption, which exceeded production by 10 percent in the early 60's, grew more slowly, resulting in small net exports during the late 70's.	
Thailand	63
Production almost doubled with little or no increase in productivity. Domestic consumption increased at a slower pace, while exports doubled.	
Other Southeast Asia	67
Production nearly doubled due, almost entirely, to productivity increases. The temporary area increases of the mid 60's were not sustained. Consumption, which accounted for only 70 percent of production in the early 60's, grew rapidly and exceeded 95 percent by the early 80's. Hence, exports fell sharply.	
Indonesia	71
Production doubled, with only a 30 percent increase in area. Consumption also doubled, and the country remained a net importer throughout the period.	

<u>Country or Region</u>	<u>Page</u>
High Income East Asia	75
Production increased by about 50 percent despite a slight reduction in area. The region was a net importer throughout the period, although both exports and imports fluctuated considerably.	
Other Low Income East Asia	79
Production doubled with little or no change in area. Consumption increased less dramatically, so that imports were reduced from 10 percent of demand to less than 5 percent by the late 70's.	
Australia	83
A seven-fold increase in production was due primarily to area increases. Consumption, which doubled over the period, accounted for almost 40 percent of production in the early 60's and dropped to less than 20 percent by the early 80's.	
USSR	85
A very sharp increase in production, over ten-fold, occurred with only a doubling in productivity. Consumption also increased dramatically, so the country continues to be a net importer.	
EC-10	89
Production increased by about 20 percent and consumption rose at a similar rate. Net imports accounted for between one-fifth and one-fourth of consumption throughout the period.	
Other Western Europe	93
Production remained more or less unchanged while consumption increased by almost 60 percent, resulting in a sharp increase in net imports.	
Eastern Europe	95
Production increased by 50 percent, almost entirely due to productivity gains. A temporary increase in area during the early 70's was not sustained. Consumption, which far exceeded production in the early 60's, increased less sharply and imports remained essentially unchanged.	
Developed Countries	99
Production increased slightly while area and consumption remained essentially unchanged. Net exports more than tripled,	

Country or Region

but still accounted for only 15 percent of total production in the early 80's.

Centrally Planned Countries

103

Production doubled with only a 10 percent increase in area. Consumption also doubled. Centrally planned countries went from being marginal net exporters in the 60's to marginal net importers in the late 70's.

Developing Countries

107

Production increased by 66 percent, with equal contributions from area and productivity increases. Consumption approximately matched production throughout the period, although developing countries were net importers in most years.

World

111

Production increased 80 percent between 1960 and 1982, with most of the increase due to higher yields. Trade nearly doubled during the period.
