FEED GRAINS DATA BOOK

by

CTAP Staff

CTAP Staff Report No. 3  
February 1985

Prepared by

R. Thamodaran, Model Research and Development Coordinator  
Anisossadat Bahrenian, Data Book Coordinator, Feed Grains Specialist  
Duane Schouten, Data Base Manager  
Jess Robinson, Computer Support Manager  
Patrick Westhoff, Editor  
William H. Meyers, Professor-in-Charge

Data Source

Original data were obtained from the OASIS Databank, World Analysis Branch, International Economics Division, Economic Research Service, U.S.D.A. Data were adjusted in some regions and years to maintain consistency between ending stocks and beginning stocks and between supply and demand. Data are on a crop year basis for the respective regions. In the tables, a "." indicates missing data.

## Annotated Index - Feed Grains

<u>Country or Region*</u>	<u>Page</u>
United States	11
Production nearly doubled between the early 60's and the early 80's due entirely to yield increases. Domestic feed and food use, which accounted for over 85% of production in the early 70's, accounted for only 55 to 60% of production in the early 80's. Food use doubled to account for 15% of domestic demand at the end of the period. Exports increased more than four-fold, increasing their share of production from about 8% in the early 60's to almost 25% by the early 80's.	
Canada	15
Production doubled with only a 10% increase in area. Domestic feed and food use increased 50% in absolute terms, but its share of production decreased from over 95% to 70%. Food use as a share of consumption remained fairly stable at 12 to 15% throughout the period. Exports amounted to less than 5% of production during the early 60's, but expanded rapidly to account for a quarter of production at the end of the period.	
Brazil	19
Production doubled with equal contributions from area and yield increases. Domestic use increased at approximately the same rate as production during the period. In most of the years prior to 1977, the country was a net exporter, but in four of the six years after 1977, Brazil was a net importer. Food use remained essentially unchanged in absolute terms over the period, and thus its share of consumption demand decreased from about 45% in the early 60's to 15% by the early 80's.	
Argentina	23
Production increased by about 125%, due primarily to a doubling in yield. Domestic food and feed use fluctuated considerably over the period, but generally declined in relative importance. Exports varied considerably from year to year, but increased three- to four-fold during the period to account for almost 65% of production in the early 80's.	
Mexico	27
Production more than doubled with only a 35% increase in area. Domestic food and feed use nearly matched production in the early 60's, but increased more rapidly than production in the 70's. Thus, even though the country was a net exporter in the late 60's, imports accounted for a quarter of consumption demand in the early 80's. Food use doubled in absolute terms, while its share of consumption decreased from 95% to 65% during the period.	

\* Regional definitions are found on page 7.

<u>Country or Region</u>	<u>Page</u>
Venezuela	31
	Production nearly tripled with equal contributions from yield and area increases. Production kept pace with domestic food and feed use in the early 60's, but consumption increased at a much faster rate than production in the 70's. As a result, imports increased dramatically, to account for 70 percent of consumption demand in the early 80's. Food use accounted for nearly all domestic use in the 60's, but feed use grew rapidly to account for over one-half of domestic use in 1982.
Central America & Caribbean Islands	35
	Production increased by about 65% with equal contributions from yield and area increases. Domestic food and feed use doubled over the same period, so imports increased dramatically. The region was essentially self-sufficient in the early 60's, but imports accounted for 15 to 20% of consumption demand by the early 80's. Food use increased by only 65% while feed use more than tripled, but food use still accounted for two-thirds of total consumption at the end of the period.
Other South America	37
	Production doubled due to increases in both yield and area harvested. Food and feed use, which marginally exceeded production in the early 60's, increased by 150% during the two decades. Net imports were once insignificant, but amounted to 25% of consumption demand by the early 80's. Food use doubled over the period and still accounted for 50% of consumption at the end of the period, even though feed demand increased at a faster rate.
Egypt	39
	Production increased by 75%, almost entirely due to an increase in yield. Food and feed use doubled during the period, resulting in a sharp increase in imports. The share of imports in consumption rose from about 10% in the early 60's to over 25% by the early 80's. Food use accounted for three-fourths of consumption demand in the mid 70's, but declined to less than half of consumption by 1982, as feed use increased rapidly.
High Income North Africa & Middle East	41
	Production increased by 30% with little or no change in area. Food and feed use, which exceeded production by about 15% in the early 60's, tripled over the period. As a result, imports increased more than ten-fold to account for almost 75% of consumption in the early 80's. Food use remained more or less unchanged over the period, while feed use increased eight-fold to account for 80% of domestic demand in the early 80's.

<u>Country or Region</u>	<u>Page</u>
Other Low Income North Africa & Middle East	45
Production increased by 75% with a 25% increase in area. Consumption closely matched production throughout the period, resulting in relatively little net trade. Feed use more than doubled between the mid 70's and the early 80's, while food use dropped by 30%. Feed use accounted for 60% of consumption in the early 80's.	
Republic of South Africa	47
Production fluctuated dramatically during the period, with the average level of the late 70's being about twice that of the early 60's. Domestic food and feed use increased steadily, doubling during the period. Exports also doubled, but they fluctuated with production. Exports accounted for about one-third of production in 1980, but the country was actually a net importer in 1982 due to a sharp decline in yield. Food use increased less rapidly than feed use, but still accounted for one-half of domestic demand in the early 80's.	
Other South Africa	51
Production remained stable during the period despite a 40% decline in area by the late 70's. In the early 80's, yields declined but area increased. Consumption increased by 30% during the period, so imports met about one-third of domestic demand in the early 80's, even though the region was self-sufficient in the early 60's.	
Central Africa	53
Production increased by 40% due to small increases in both area and yield. Consumption increased at a slightly higher rate, but net imports supplied less than 5% of consumption demand throughout the period. Food use accounted for over 95% of the domestic demand.	
East Africa	55
Production doubled due to a matching increase in area. Consumption increased at a slightly higher rate, so the region went from being a small net exporter to being a small net importer. Food use accounted for over 95% of domestic demand.	
People's Republic of China	57
Production increased by about 30%, despite a 30% reduction in area. Domestic consumption marginally exceeded production throughout the period, as imports supplied for less than 2% of demand.	

<u>Country or Region</u>	<u>Page</u>
Japan	61
Production decreased by 85%, despite a 20% increase in yield. Feed and food use increased four-fold, so imports increased ten-fold. Imports supplied just 60% of consumption demand in the early 60's, but 98% by the early 80's. Feed use increased more rapidly than food use, and accounted for 80% of total consumption by the early 80's.	
India	65
Production increased by about 30% despite a 10% decrease in area. The country was essentially self-sufficient during most of the period, except for limited imports between 1965 and 1967 and between 1972 and 1975. Food use accounted for over 95% of domestic demand, even though feed use grew more rapidly than food demand.	
Other South Asia	67
Production increased 20% due to modest increases in both area and yield. Domestic use also increased at the same rate. The region remained self-sufficient through most of the period, with occasional marginal imports or exports not exceeding 5% of demand or production. Food use accounted for almost all of consumption demand. Feed use increased until the mid 70's but declined rapidly thereafter.	
Thailand	69
Production increased seven-fold during the period, due almost entirely to increases in area harvested. Domestic food and feed use increased rapidly, but still accounted for less than one-third of production in the early 80's. Exports increased more than four-fold during the period. Feed use accounted for nearly all of domestic consumption by the end of the period.	
Other Southeast Asia	73
Although area harvested doubled, production increased by only 40% due to a reduction in yield. Domestic consumption tripled over the period, so exports declined from 65% of production in the early 60's to near zero by the early 80's.	
Indonesia	75
Production increased 65% due primarily to an increase in yield. Food and feed use approximately equaled production throughout the period with marginal exports during the late 60's and early 70's and marginal imports thereafter. Feed use increased five-fold, but food use still accounted for 80 percent of consumption demand in the early 80's.	

<u>Country or Region</u>	<u>Page</u>
High Income East Asia	77
Production doubled between the early 60's and the mid 70's, but then declined dramatically. Consumption increased six-fold, and imports grew even more rapidly. Domestic production met almost 85% of consumption demand in the early 60's, but by the early 80's, imports met almost 90% of demand. Feed use increased much more rapidly than food use, and accounted for 80 percent of consumption demand in the early 80's.	
Other Low Income East Asia	81
Production nearly tripled with only a 30% increase in yield. Domestic food and feed use increased at a slightly higher rate, so imports increased ten-fold and accounted for over 30% of consumption demand in the early 80's. Food use accounted for two thirds of consumption in the early 60's, but feed use increased more rapidly, and accounted for 60% of the total in the early 80's.	
Australia	83
Production fluctuated considerably during the period, but generally increased due to an increase in area. Exports tripled between the early 60's and 1981, but declined dramatically in 1982 due to a sharp decline in yield. Exports generally accounted for one-fourth to one-half of production. Feed use as a share of consumption increased from 60% to over 75% during the period.	
New Zealand	87
Production increased about five-fold, with equal contributions from both area and yield increases. Domestic use increased at a slower rate, so the country moved from being self-sufficient to being an exporter of 10-20% of production. Food use accounted for 20-25% of domestic consumption during most of the period.	
USSR	89
Production doubled between the early 60's and the peak year of 1976, before falling again in the late 70's. Production and trade fluctuated dramatically from year to year, due primarily to changes in yield. Consumption also increased rapidly until 1976, but then declined less than did production. Hence, the country went from being a marginal exporter in the 60's to being an importer of one-fourth of domestic consumption in 1981. Feed use doubled during the period and accounted for 70% of consumption demand by the 80's.	
EC-10	93
Production increased by 65% with little or no change in area. Domestic use grew rapidly in the 60's, but was flat in the 70's and 80's. Net imports supplied about one-fourth of domestic demand in the late 60's, but were negligible by 1982. Feed use accounted for about 70% of consumption demand throughout the period.	

<u>Country or Region</u>	<u>Page</u>
Other Western Europe	97
	Production doubled with only a 20% increase in area. Domestic demand, almost 90% of which was met by production in the early 60's, increased by over 150% during the period, increasing imports five-fold. Imports supplied a third of domestic demand in the early 80's. Feed use accounted for about 85% of consumption demand throughout the period.
Eastern Europe	101
	Production increased by about 55%, as yield almost doubled. Domestic use increased at a slightly faster rate than production, so net imports increased from negligible levels to supply more than 10% of domestic demand in the late 70's. Food use remained more or less unchanged while feed use doubled. Feed use as a share of consumption demand increased from 65% in the early 60's to 80% by the early 80's.
Developed Countries	107
	Production increased by 80%, entirely due to an increase in yield, while consumption increased at a slower rate. Developed countries were marginal net importers in the 60's, but were net exporters of about 10% of production at the end of the period. Feed use increased more slowly than food demand, but still accounted for 80% of consumption demand in the early 80's.
Centrally Planned Countries	111
	Production and yield almost doubled, with most of the increase occurring prior to 1973. Consumption increased more rapidly than production, especially in the 70's. Centrally planned countries were marginal net exporters in the 60's, but imports supplied approximately 10% of domestic demand in the late 70's and early 80's.
Developing Countries	115
	Production increased by about two-thirds with only a 15 to 20% increase in area. Consumption increased more rapidly, so developing countries went from being net exporters in the 60's and early 70's to being net importers of approximately 10% of consumption demand in 1982.
World	119
	Production increased by 75% due almost entirely to yield increases. The volume traded internationally increased from about 6% of production in the early 60's to 12% by the early 80's. Both food and feed use increased at about the same rate, with feed use amounting to about 60% of consumption demand throughout the period.
