SORGHUM DATA BOOK

by

CTAP Staff

CTAP Staff Report No. 7
March 1985

Prepared by

R. Thamodaran, Model Research and Development Coordinator
Anisossadat Bahrenian, Data Book Coordinator and Sorghum Specialist
Duane Schouten, Data Base Manager
Jess Robinson, Computer Support Manager
Patrick Westhoff, Editor
William H. Meyers, Professor-in-Charge

Data Source

Original data were obtained from the OASIS Databank, World Analysis Branch, International Economics Division, Economic Research Service, U.S.D.A. Data were adjusted in some regions and years to maintain consistency between ending stocks and beginning stocks and between supply and demand. Data are on a crop year basis for the respective regions. In the tables, a "." indicates missing data.

Annotated Index - Sorghum

<u>Country or Region*</u>	<u>Page</u>
United States	11
<p>Production increased by more than 50% between the early 60's and its peak in 1973, due primarily to increases in yield. After 1973, production fluctuated considerably, with sharp declines in 1974 and 1980 due to temporary yield reductions. Domestic use, almost entirely as feed, grew until the early 70's, but then returned to levels of the early 60's. Stocks declined dramatically between the early 60's and the mid 70's, but increased again in the early 80's. Exports increased approximately three-fold over the period. More than one-fourth of production was exported in the early 80's.</p>	
Brazil	15
<p>Production data for the 60's are unavailable. The country was a small producer in the 70's and 80's, and most of its production was used domestically for feed. Brazil was a marginal net importer during most of the 60's and a marginal net exporter during most of the 70's and 80's.</p>	
Argentina	17
<p>Production increased six-fold between the early 60's and the early 80's, due primarily to an increase in area harvested. Domestic use, primarily as feed, tripled over the period, and exports increased more than ten-fold. Over 60% of production was exported in the early 80's.</p>	
Mexico	21
<p>Production increased more than ten-fold between the early 60's and the early 80's, as area harvested expanded rapidly. Domestic use, almost entirely as feed, grew even more dramatically. The country was a marginal net exporter in the late 60's, but imports supplied approximately half of domestic demand in the early 80's.</p>	
Venezuela	25
<p>Production increased rapidly in the late 70's from insignificant levels, due to a sharp expansion in area. Domestic use also increased rapidly. Imports remained relatively constant during most of the 70's, but fluctuated widely between 1979 and 1982. Imports supplied more than half of domestic demand during most of the period.</p>	
Central America & Caribbean Islands	29
<p>Production doubled between the early 60's and early 80's, due to increases in both yield and area harvested. Food use increased more rapidly than feed use, and accounted for half of domestic consumption in 1982. The region was essentially self-sufficient in the 60's, but was a marginal net importer during most of the rest of the period.</p>	

* Regional definitions are found on page 6.

<u>Country or Region</u>	<u>Page</u>
Other South America	31
Production increased dramatically, due primarily to increases in area harvested. Domestic use, almost entirely as feed, also increased very rapidly. Net imports increased in absolute terms, but generally supplied less than 15% of domestic demand.	
Egypt	33
Production increased during the 60's, but generally declined thereafter due to a reduction in area harvested. The country was essentially self-sufficient throughout the period. Feed use accounted for approximately two-thirds of domestic use in the late 70's and early 80's.	
High Income North Africa & Middle East	35
Production tripled between the early 60's and the mid 70's, but then declined again. Domestic use, primarily as feed, increased five-fold between the early 60's and the early 80's, and imports increased a similar amount. Imports supplied more than 85% of domestic demand in the early 80's.	
Other Low Income North Africa & Middle East	39
Production fluctuated considerably, but generally increased modestly between the early 60's and the early 80's. Domestic use, almost entirely as food, generally grew at the same rate as production until the end of the period, when exports increased rapidly. Approximately 20% of production was exported between 1979 and 1982.	
Republic of South Africa	43
Production, yield and area all fluctuated considerably, but yield generally increased while area harvested decreased. Food use varied less than feed use, and accounted for approximately two-thirds of domestic consumption in the late 70's and early 80's. Over 50% of production was exported in some years, but exports dropped to zero in the early 80's, as production declined dramatically.	
Other South Africa	45
The region was a small producer whose production declined after the mid 70's. Food use accounted for all of reported domestic consumption, and generally declined after 1971. Imports were negligible in some years, but supplied over half of domestic demand in other years.	
Central Africa	47
Production increased modestly between the early 60's and the early 80's, due entirely to a small increase in yield. Food use accounted for nearly all of domestic consumption, and generally grew at the same rate as production. Imports supplied less than 5% of domestic demand throughout the period.	

<u>Country or Region</u>	<u>Page</u>
East Africa	49
Production, area and yield changed little during the period, although there was some annual variation. The region was essentially self-sufficient, although there were marginal imports in the 60's and early 70's.	
People's Republic of China	51
Production doubled between the early 60's and the early 70's, but then fell back to the original level by the early 80's. Area harvested remained fairly steady in the 60's, and declined sharply in the 70's, while yields increased steadily throughout the period. Marginal imports occurred in 1978, but no other trade in sorghum was recorded.	
Japan	55
The country produced no sorghum. Imports increased rapidly between the early 60's and the late 70's, but declined somewhat in the early 80's. Feed use accounted for nearly all of domestic consumption.	
India	59
Production increased modestly despite a small reduction in area harvested, due to a 40% increase in yield. The country was self-sufficient for most of the period, although there were marginal imports between the mid 60's and the mid 70's. Food use accounted for over 90% of domestic consumption throughout the period.	
Other South Asia	63
Production increased in the 60's and early 70's, but returned to original levels by the early 80's. The region was self-sufficient for most of the period, except for marginal imports and exports between 1967 and 1973. Feed use accounted for half of domestic demand in the 60's, but food use accounted for all of demand at the end of the period.	
Thailand	65
Production increased rapidly from negligible levels due to a large increase in area harvested. Domestic consumption, primarily as feed, grew less rapidly. Approximately two-thirds of production was exported in the late 70's and early 80's.	
High Income East Asia	67
The region was a minor producer. Domestic use and imports grew rapidly in the late 70's and early 80's. Feed use accounted for nearly all of domestic consumption.	
Other Low Income East Asia	69
The region produced no sorghum. Limited feed use and imports occurred in the 70's and early 80's.	

<u>Country or Region</u>	<u>Page</u>
Australia	71
Production increased dramatically between 1968 and 1970, due primarily to an increase in area. Production, area, and yield all remained fairly constant after 1970, although there was considerable annual variation. Domestic use, primarily as feed, also varied widely. Over half of production was exported in most years.	
USSR	75
The country produced no sorghum. Trade was negligible until the early 80's, when substantial imports were used to meet feed demand.	
EC-10	79
Production increased eight-fold due to increases in both area and yield. Domestic consumption, almost entirely as feed, peaked in the mid 60's and then declined 80% by the early 80's. Net imports also peaked in the mid 60's, when they supplied 90% of domestic demand. By the early 80's, net imports were relatively insignificant.	
Other Western Europe	83
Production expanded rapidly from negligible levels, due to increases in both area and yield. Domestic consumption, primarily as feed, grew even more rapidly. Imports, therefore, also increased, although there was considerable annual variation. Imports supplied more than 70% of domestic demand in most years.	
Eastern Europe	87
The region was a minor producer. Domestic consumption and imports fluctuated considerably, reaching their peaks in the mid 70's and declining to negligible levels in the early 80's. Feed use accounted for almost all of domestic demand.	
Developed Countries	93
Production increased by 50% between the early 60's and the early 70's, due to increases in both area and yield. Production, area and yield all remained fairly steady in the 70's and early 80's, although there was considerable annual variation. Domestic consumption, primarily as feed, increased until the early 70's, but then declined. Developed countries were net importers in some years, but were net exporters in every year after 1977.	
Centrally Planned Countries	97
Production more than doubled between the early 60's and the early 70's, due entirely to increases in yield. Production declined after 1970 due to a sharp decline in area, even though yields continued to increase. Consumption peaked in the early 70's and then fell considerably before recovering in the early 80's. Imports were relatively insignificant before 1976, but supplied approximately one-fourth of domestic demand in the early 80's.	

<u>Country or Region</u>	<u>Page</u>
Developing Countries	101

Production almost doubled due to increases in both yield and area harvested. Consumption grew at a similar pace. Developing countries were marginal net exporters in most years, but net trade was generally very small compared to production. Food use accounted for approximately 60% of domestic demand in the early 80's.

World	105
-------	-----

Production increased by 50% between the early 60's and the early 70's, primarily due to increased yields. Production was relatively constant in the 70's and early 80's, as a slight increase in yield was offset by a decline in area. Trade increased four-fold between the early 60's and the early 80's, when about 20% of production was traded internationally. Feed use grew more rapidly than food use, and accounted for slightly over half of consumption demand in the early 80's.
