The Center for Agricultural and Rural Development at Iowa State University has been a leader in agricultural economic policy research since its founding in 1958.

Research projects at CARD are conducted in four major areas:

1. Trade and agricultural policy—Evaluation of conditions and policies influencing U.S. and international markets for agricultural commodities.
2. Food and nutrition policy—Effects of agricultural and food policy on consumption and nutrition in developed and developing countries.

3. Resources and conservation policy—Use of linear programming models reflecting information on soil types, production and distribution systems, water conservation, transportation, and other factors that determine impacts of national level policies on regions and states.

4. Rural and economic development—Evaluation of changes in agricultural policy that affect rural and economic development.

Additional copies of this publication may be obtained by writing CARD at 578 Heady Hall, Iowa State University, Ames, Iowa 50011.

SOYBEAN DATA BOOK

by

CTAP Staff

CTAP Staff Report No. 13
August 1985

Prepared by

S. Devadoss, Model Research and Development Coordinator
Anisossadat Bahrenian, Data Book Coordinator
Duane Schouten, Data Base Manager
Michael Helmar, Soybean Specialist
Jess Robinson, Computer Support Manager
Patrick Westhoff, Editor
William H. Meyers, Professor-in-Charge

Data Source

Original data were obtained from the OASIS Databank, World Analysis Branch, International Economics Division, Economic Research Service, U.S.D.A. Data were adjusted in some regions and years to maintain consistency between ending stocks and beginning stocks and between supply and demand. Data are on a crop year basis for the respective regions. In the tables, a "." indicates missing data.

Annotated Index - Soybeans

<u>Country or Region*</u>	<u>Page</u>
United States	11
Production tripled between 1965 and 1980, due primarily to an increase in area harvested. Production fell sharply in 1981 before recovering in 1982 and 1983. Domestic crush doubled between the mid 60's and the early 80's, and accounted for 90% of domestic use throughout the period. Ending stocks fluctuated considerably. Exports increased four-fold between the mid 60's and the early 80's. Over 40 percent of production was exported in the early 80's.	
Canada	15
Production increased four-fold between the mid 60's and early 80's due primarily to a large increase in area harvested. Crush doubled during the period, and accounted for nearly all of domestic use. Net imports remained relatively constant during the period, as did stocks. Net imports supplied approximately 30% of domestic demand in the early 80's.	
Brazil	19
Production increased rapidly, especially between the mid 60's and the mid 70's, due primarily to a large increase in area harvested. Domestic crush also increased very rapidly, and accounted for 90% or more of domestic use in every year after 1976. Ending stocks peaked in 1977, and generally declined thereafter. Exports increased with production until the mid 70's, after which time a higher proportion of production was crushed domestically. Net exports accounted for less than 10% of production in every year after 1977, and in 1982, Brazil was actually a net soybean importer.	
Argentina	23
Production increased dramatically in the 70's, due to increases in both area and yield. Domestic crush also increased sharply, particularly between 1980 and 1983. Ending stocks remained modest throughout the period, and declined in the early 80's. Exports increased from 0 in 1975 to two-thirds of production in 1979, but then declined thereafter. Only one-third of production was exported in 1983.	
Mexico	27
Production increased rapidly between the mid 60's and the mid 70's and then fluctuated considerably, due primarily to changes in area harvested. Crush continued to increase even after production leveled off, so imports increased in the late 70's and early 80's. Imports fluctuated dramatically from year to year, but supplied an average of two-thirds of domestic demand in the early 80's.	

*Regional definitions are on page 6.

<u>Country or Region</u>	<u>Page</u>
Venezuela	29
Production was reported only in 1980, and domestic use and imports were limited. Crush and imports generally grew over time, but annual fluctuations were large.	
Central America & Caribbean Islands	31
No production was reported until 1982. Crush and imports grew rapidly after the mid 70's.	
Other South America	33
Production increased rapidly until 1980 due to increases in area harvested. Domestic demand grew less rapidly than production, so net exports increased. Net exports accounted for approximately half of production in the early 80's.	
Egypt	35
Production and consumption were both negligible prior to the mid 70's, but grew rapidly thereafter. Imports supplied one-fourth of domestic demand in the early 80's.	
High Income North Africa & Middle East	37
The region was a minor producer, whose production increased rapidly until 1979. Crush more than doubled during the period, and accounted for nearly all of domestic use. Imports supplied almost 90 percent of domestic demand in the early 80's.	
Other Low Income North Africa & Middle East	39
Production was negligible throughout the period, despite a sharp increase in 1982 and 1983. Crush increased rapidly until its peak in the late 70's, as did imports. Imports supplied three-fourths of domestic demand in the early 80's.	
Republic of South Africa	41
Production and consumption were both insignificant during the entire period. The country was a minor net importer in some years and a minor net exporter in others.	
Central Africa	43
Reported production increased in the late 60's and early 70's, but remained modest throughout the period. Crush demand was insignificant, with food and other uses accounting for 95% of domestic consumption. The region was a minor exporter in the 60's and early 70's, but did not trade soybeans internationally after 1977.	

<u>Country or Region</u>	<u>Page</u>
East Africa	45
Production expanded rapidly due to increase in both area and yield. Crush demand also grew rapidly until a slight decline in 1983. Exports peaked in 1978, but the region did not trade soybeans internationally after 1980.	
People's Republic of China	47
Production increased modestly between the mid 60's and the early 80's, due entirely to increases in yield. Crush accounted for approximately 40% of total consumption throughout the period, as food and other uses accounted for most of domestic demand. The country was a marginal net exporter in the 60's and early 70's, but was a marginal net importer in most years after 1976.	
Japan	51
Production decreased in the late 60's and increased in the late 70's, but remained modest during the entire period. Crush more than doubled between the mid 60's and the early 80's, while food and other uses increased less rapidly. Crush accounted for almost 80% of domestic consumption in the early 80's. Imports supplied more than 95% of domestic demand at the end of the period.	
India	55
Production and consumption increased rapidly in the 70's and early 80's. Crush accounted for almost 85% of domestic demand at the end of the period. The country neither imported nor exported soybeans in any year after 1965.	
Thailand	57
Production increased rapidly, due entirely to an increase in area harvested. Consumption generally grew with production. In the early 80's, crush accounted for half of domestic demand, and food and other uses accounted for the other half. The country was a marginal net exporter in most years, but was a marginal net importer in others.	
Other Southeast Asia	59
Production and consumption were limited throughout the period. Crush was insignificant; food and other uses accounted for nearly all of domestic consumption. The region neither imported nor exported soybeans.	
Indonesia	61
Production increased by 75% between the mid 60's and 1981 before falling off considerably in 1982 and 1983. Crush increased only	

<u>Country or Region</u>	<u>Page</u>
slightly during the period, but food and other uses more than doubled. Food and other uses accounted for 90% of total consumption at the end of the period. The country began to import soybeans in the mid 70's, and imports supplied about 40% of domestic demand in the early 80's.	
High Income East Asia	63
Production increased until the mid 70's, but then declined, despite continued increases in yields. Crush increased more rapidly than food and other uses, and crush accounted for 70% of total consumption in the early 80's. Net imports increased rapidly, and supplied over 85% of domestic demand at the end of the period.	
Other Low Income East Asia	67
Production was negligible throughout the period. Crush increased rapidly in the late 70's and early 80's, while food use grew less rapidly. Crush accounted for 80% of domestic demand in the early 80's. Imports remained fairly steady until increasing rapidly in the late 70's and early 80's.	
Australia	69
Production generally increased until 1979 and declined thereafter. Crush peaked in 1981, and accounted for nearly all of total consumption. Imports supplied approximately one-third of domestic demand in the early 80's.	
USSR	71
Production varied considerably from year to year, but never exceeded its peak in 1976. Crush increased rapidly until 1977, and accounted for 85% of total consumption at the end of the period. The country began to import soybeans consistently in the 70's, and imports generally supplied 70% of domestic demand in the late 70's and early 80's.	
EC-10	75
Production was negligible, although there was some increase at the end of the period. Crush more than tripled between the mid 60's and 1980, before declining somewhat at the end of the period. Crush accounted for 95% or more of total consumption in most years. Imports supplied 98% of domestic demand in the early 80's.	
Other Western Europe	79
Production was negligible, and peaked in 1975. Crush increased eight-fold between 1965 and 1983. Crush accounted for almost all of total consumption, and imports supplied almost all of domestic demand.	

<u>Country or Region</u>	<u>Page</u>
Eastern Europe	83
Production increased dramatically, due primarily to an increase in area harvested. Crush increased rapidly until 1980, and accounted for almost 95% of total consumption. Imports also increased rapidly until 1980 before declining somewhat. Imports supplied approximately half of domestic demand in the early 80's.	
Developed Countries	89
Production tripled between 1965 and 1983, due primarily to a doubling of area harvested. Crush increased slightly more rapidly than food and other uses, and crush accounted for more than 90% of total consumption throughout the period. Developed countries were net importers in some years prior to 1978, but they were net exporters in all later years.	
Centrally Planned Countries	93
Production increased by 25% between the mid 60's and the early 80's, due entirely to increases in yield. Crush increased more rapidly than food and other uses, and crush accounted for slightly over half of total consumption at the end of the period. Centrally planned countries were net exporters until 1971, but were net importers thereafter. Net imports supplied approximately 20% of domestic demand in the early 80's.	
Developing Countries	97
Complete information on developing country production and consumption is unavailable. Crush accounted for 85% of total consumption in the early 80's. Imports and exports both increased rapidly during rapidly during the period. Developing countries were net exporters between 1973 and 1980, but were net importers during the rest of the period.	
World	99
Production tripled, due primarily to a doubling of area harvested. Crush increased more rapidly than food and other uses, and crush accounted for 85% of total consumption at the end of the period. Approximately 30% of production was traded internationally in the early 80's.
