## TEXAS VEGETABLE, MELON, AND CITRUS CROPS: PRODUCTION, LOCATION AND COMPETITIVE POSITION

---

Texas Agricultural Market Research Center (TAMRC) Information Report No. IR-1-91 prepared by Stephen Fuller, Charles Hall, and Merritt Taylor. Fuller is a Professor and Hall an Extension Economist - Horticultural Marketing in the Department of Agricultural Economics at Texas A&M University, College Station, Texas. Taylor is an Extension Economist - Management at Weslaco, Texas. Appreciation is expressed to Karen Kunz and Haruna Bello for assembly of data included in this report. April 1991.

**ABSTRACT:** This report provides detailed statistical information on selected vegetable, melon, and citrus crop production in Texas. Information is offered on acreage, production, price, location of production, and competition during the Texas production and marketing window. In 1987, Texas producers harvested 63,500 acres of selected vegetable crops, 25,000 acres of honeydew and cantaloupe, and 23,000 acres of citrus with a total estimated value of \$280 million. Texas vegetable, melon, and citrus production is concentrated in the Lower Rio Grande Valley. Texas is an important contributor to the nation's annual supply of onion, cabbage, carrots, cantaloupe, and honeydew. About half of the U.S. fresh cabbage shipments are originated by Texas producers in January, February, March, April, and December. Texas producers supply about two-thirds of fresh onion shipments in April and early May. In May and June, about half of the cantaloupe and three-fourths of the honeydew originate in Texas. Recent freezes distort Texas' long-run role as a citrus supplier.

*The Texas Agricultural Market Research Center (TAMRC) has been providing timely, unique and professional research on a wide range of issues relating to agricultural markets and commodities of importance to Texas and the nation for more than two decades. TAMRC is a market research service of the Texas Agricultural Experiment Station and the Texas Agricultural Extension Service. The main TAMRC objective is to conduct research leading to expanded and more efficient markets for Texas and U.S. agricultural products. Major TAMRC research divisions include International Market Research, Consumer and Survey Research, Commodity Market Research, and Contemporary Market Issues Research.*

# **TEXAS VEGETABLE, MELON, AND CITRUS CROPS: PRODUCTION, LOCATION AND COMPETITIVE POSITION**

**Stephen Fuller, Charles Hall  
and Merritt Taylor**

The purpose of this report is to provide statistical data on selected vegetable, melon, and citrus fruit crops produced in Texas. The products examined include eight vegetables (broccoli, cabbage, carrots, celery, cucumbers, green bell peppers, onions, and tomatoes), two melons (cantaloupe and honeydew), and two citrus fruits (grapefruit and oranges). The report offers information on (1) acres harvested, yield/acre, production, prices, and total value for each of the Texas-produced products; (2) the production locations for each of the crops produced in Texas; (3) competing states' production of each commodity; and (4) regional competitors during Texas' production window. An effort was made to collect at least five years of historical data for each product. However, due to reductions in federal and state funding and changing commodity priorities, statistical data for some products were not available for the most recent five year period.

Data to construct this report were made available by the U.S. Department of Agriculture (USDA) and the Texas Department of Agriculture (TDA). A series of annual publications from Texas Vegetable Statistics (TDA), provided information on acres harvested, yield/acre, production, prices, total value, and location of Texas' vegetable and melon production. The Vegetable Summary, an annual USDA publication, supplied data on production in Texas as well as that of competing states. Similar information on citrus was taken from the Citrus Fruits, another annual USDA publication. Data regarding the location of citrus production in Texas was from the Texas Citrus Tree Inventory Survey

(TDA). Information on regional competitors during Texas' production window came from Fresh Fruit and Vegetable Shipments (USDA).

The report is divided into four sections. The first two sections provide detail about the level and location of acreage, yield, production, price and value of Texas vegetable, melon, and citrus products. The latter two sections offer insight on Texas' relative role as a national producer.

### **TEXAS ACREAGE, YIELD, PRODUCTION, PRICE AND VALUE**

An effort was made to include 1983-87 data for each product and in the case of broccoli, carrots, celery, onions, honeydew, and citrus, the 1988 data were available and accordingly were included. Unfortunately, statistics for Texas celery were available only for 1988.

#### **Vegetables**

In 1987, Texas producers harvested 63,500 acres of the selected vegetable crops (excluding celery) and sold this production for an estimated \$197.2 million. In contrast, products from 83,600 acres were harvested in 1983 at a value of \$192.9 million (Tables 1-8). Typically, onions have occupied the greatest acreage and have had the largest total value. The statewide value of onion production during the study period ranged from a high of \$87.5 million in 1984 to a low of \$48.5 million in 1988 (Table 7). Other total value leaders included cabbage, with annual sales ranging from \$34.6 to \$76.9 million during the same period (Table 2). The annual value of green bell peppers varied from \$22.6 to \$33.8 million (Table 6) while the range on carrots extended from \$17.2 to \$30.1 million (Table 3). The

remaining vegetables (broccoli, cucumbers, and tomatoes) have been allotted smaller acreage and have generally returned less total value to producers.

### **Melons**

Cantaloupe and honeydew are important Texas crops with annual producer sales averaging about \$58 million during the 1983-87 period. Harvested acreage of these crops has been relatively constant at about 25,000 acres (Tables 9 and 10).

### **Citrus**

A catastrophic freeze in December of 1983 seriously damaged the Texas citrus industry. The bearing acreage of grapefruit and oranges in 1983-84 was estimated at 43,256 and 24,280 respectively (Tables 11 and 12). In the several seasons following the freeze, bearing acreage declined to about one-third of the 1983-84 season. Despite the reduced acreage, the value of annual citrus production in the 1987-88 season (\$39.2 million) exceeded that of 1983-84 (\$20.9 million). The low price and value in 1983-84 was the result of the freeze-damaged fruit.

## **LOCATION OF TEXAS VEGETABLE, MELON AND CITRUS PRODUCTION**

Texas harvested acreage by subregion was used as a proxy to estimate Texas production of vegetable, melon, and citrus output because the data is unavailable by Texas subregion. Estimates of harvested acreage by subregion was discontinued in 1986 (except onions). The most recent five-year period of data extends from 1981-85. Also, no

information on Texas harvested celery acreage is available by subregion since efforts to collect Texas celery data commenced after 1986.

### **Vegetables**

The lower Rio Grande Valley is the dominant source of Texas vegetables (Tables 13-19). For example, in 1983 about 70% of the harvested acreage for the selected vegetables (excluding celery) was located in the lower Rio Grande Valley. The Plains and Winter Garden region included about 12% and 10% of the state's harvested acreage, respectively, in 1983. Acreage leaders in the Valley include onions, cabbage, carrots, cucumbers, green bell peppers, and tomatoes.

### **Melons**

About two-thirds of the harvested cantaloupe acreage and 75% of the honeydew acreage is located in the lower Rio Grande Valley (Tables 20, 21). The Trans Pecos region typically includes nearly 12% of the harvested cantaloupe and honeydew and the Winter Garden region about 8% of the cantaloupe acreage.

### **Citrus**

Based on the Texas Citrus Tree Survey, all Texas citrus acreage is located in the lower Rio Grande Valley. Hidalgo county includes about 80% of all bearing acreage. Cameron county includes about 15% of the bearing acreage and Willacy county the remainder (Tables 22,23).

## **TEXAS PRODUCTION AND COMPETING REGIONS**

To gain perspective on the role of Texas as a national vegetable, melon, and citrus supplier, historic data on harvested acreage and production by state were collected. Efforts were made to collect the most recent 5-year series which, in most cases, included the 1983-88 period. However, for cabbage, green bell pepper, and cantaloupe a comparable historic record exists only prior to 1981. Consequently, data for those crops for 1977-81 are included here.

### **Vegetables**

Texas is an important contributor to the annual national supply of vegetables, but consistently leads the nation only with its spring and summer non-storage onion production (Tables 24-31). Historically, Texas has produced about half of the spring/summer onion crop (Table 30). Typically, Texas and Florida rank either first or second as suppliers of cabbage. Texas generally supplies about one-fifth of the annual national cabbage output (Table 25). Texas is the second largest carrot supplier with a production share that averages about 10% (Table 26). Only about 5% of the annual broccoli supply is generated by Texas producers. Nevertheless, Texas ranks second behind California which supplies over 90% of all broccoli (Table 24). Texas ranks as the third and fourth most important supplier of green bell peppers (Table 29) and cucumbers (Table 28), respectively, with production shares of about 13 and 7%. On the average, Texas produces only about 1% of the annual fresh tomato supply (Table 31).

### **Melons and Citrus**

Texas is the second largest national supplier of cantaloupe (Table 32) and honeydew melons (Table 33) behind California. Texas generally produces about 17 and 20% of all cantaloupe and honeydew, respectively. The freeze that badly damaged the Texas citrus industry in December of 1983, also makes it difficult to obtain an accurate perspective on Texas' role as a national citrus supplier (Tables 34 and 35). During the study period, Texas produced from 0 to 18% of the U.S. grapefruit output and 0 to 3% of all national orange output.

### **THE TEXAS PRODUCTION WINDOW AND COMPETING REGIONS**

The most accurate perspective of the role of any region as a national supplier of a perishable product is best provided by examining production data over a shorter time frame than one year. Accordingly, the share of the nation's monthly fresh vegetable, melon, and fruit shipments originating in Texas was calculated. Shipment data for products destined to the fresh market are gathered by the USDA Agricultural Marketing Service (AMS). In addition to monthly domestic shipments by state, data were collected on foreign exports by state and imports by foreign nations. All data is on a monthly basis over the five-year period of 1983-88. The complete data set is presented in Appendix A. The monthly market shares held by Texas producers for various vegetables and fruit products are shown in Figures 1 through 12.

## **Vegetables**

The data indicate that Texas supplies a significant share of the domestically-originated fresh vegetable shipments in selected months. For example, nearly half of all fresh cabbage domestic shipments originate in Texas during January, February, March, April, and December (Figure 2). Further, Texas producers supply about two-thirds of all fresh onion shipments in April and about half in May (Figure 7). Texas is also an important supplier of carrots, cucumbers, and green bell peppers (Figures 3, 5 and 6). The monthly market share of Texas vegetables does not generally exceed 25% in any given month. The Texas shipping season is extended, however, for carrots, cucumbers, and peppers. Carrots and green bell peppers are shipped in significant quantities for eight months and cucumbers for nine months per year. Broccoli and celery shipments by Texas producers are confined to the winter and fall months and have monthly market shares no larger than 8 to 12% (Figures 1 and 4). The share of the monthly national fresh tomato market supplied by Texas in May, June, November, and December approaches 2% (Figure 8).

## **Melons and Citrus**

Texas is a leading supplier of melons during the spring season (Figures 9, 10). In May, about two-thirds of the cantaloupe and 97% of the honeydew originate in Texas. In June, however, Texas supplies only about 28% of the cantaloupe and 60% of the honeydew. Texas producers made small shipments of melons to foreign buyers in the 1983 and 1984 seasons.

The freeze of December 1983 distorts the image of Texas as a national supplier of citrus (Figures 11 and 12). Based on data from the two most recent growing seasons (1987

and 1988), the Texas monthly market share during the fall ranges from 9 to 18% for grapefruit and in the spring from 2 to 14% (Figure 11). The Texas orange monthly market share averages about 3% in both the spring and fall seasons.

## CONCLUSIONS

The role of Texas as a major national supplier of vegetables, melons, and citrus has changed over the years. The major feature of Texas production has been the instability caused by several years of severe weather problems. The area devoted to vegetables has dropped by nearly 25% since the early 1980s. Nevertheless, while onion acreage has dropped markedly, cabbage, green bell peppers and carrots have all experienced acreage increases. Other vegetables like broccoli, cucumbers, and tomatoes have declined in production.

Melon production in Texas has remained fairly constant while Texas citrus production was devastated by a freeze in 1983 and again in 1988. Citrus acreage as a result has dwindled significantly.

Despite declines in production, Texas still remains a significant national supplier of vegetables and melons. Texas is the nation's largest supplier of onions and second largest supplier of cabbage, carrots, broccoli, cantaloupe, and honeydew melons. The national ranking of Texas as a supplier of citrus has slipped considerably in recent years. During certain months of the year (the "Texas window"), however, shipments of vegetables and melons from Texas dominate national markets. Texas onions, for example, account for 66% of the onion market in April and May. Texas melons dominate during the spring season.

At the same time, Texas ships most of its broccoli and celery in the fall and winter months but only accounts for 8 to 12% of national supply during those months.
