PREFACE

[This publication contains historical data for corn and related variables. It was gathered for use in regional and U.S. demand/supply econometric models. Data for many of the variables cover 1949/50 - 1987/88. All 1962/63 - 1987/88 values are included for all the variables. Some 1988/89 and 1989/90 values are also included for many variables.] NA indicates the value was either not available or not calculated for those years. Data sources and methods of calculating data are given in the appendix.

Corn yield = production/acres harvested (Tables 3 & 7)

State and U.S. Corn farm price (Tables 5 & 7)

Herb Vanderberry/ National Agriculture Statistics/ Crop Branch/
Washington, D. C./ Phone (202) 447-9526

Corn farm cash receipts = (farm price)*(production) (Tables 6 & 8)

Regional Corn farm price = $\Sigma(\text{state } i \text{ prod.} * \text{state } i \text{ price} / \text{region } j \text{ prod.})$ (Tables 5 & 7)

U.S. and Regional Corn variable production costs (Table 8)

Costs of Production for Major U.S. Crops, 1975-1987 /USDA /ERS /ARED Released: May 1989
Tables 1 - 6, pages 4 - 9
Since 1960 - 1974 data were not available their values were estimated by regressions with
the index of prices paid by farmers for all production items (1910 - 1914 = 100)
in "Agricultural Statistics".

U.S. and Regional Corn returns above variable costs = cash receipts - variable production costs (Table 8)
