Secretary and Treasurer, The Indian Society of Agricultural Economics, Bombay.

Rabi season is here. It is time for Wheat, Potato, Sugar-cane. It is time to apply Ammonium Sulphate.

The Rabi farming swings into action! Now is the time to ensure that every crop gets Nitrogen, Phosphorus and Potash—besides Sulphur, the "Gandhak" nutrient. Year after year as you harvest the crops, "Gandhak" nutrient is removed from soil... pretty rapidly and in very heavy proportions. No wonder the need for Sulphur nutrient is felt so acutely in the irrigated areas.

When the soil is deficient in Sulphur, crop growth gets stunted, plant development gets retarded. Crops-plants turn yellow. Yield goes down. That is why it is absolutely necessary to apply fertilizer enriched with Sulphur.

GSFC's Ammonium Sulphate is an ideal Sulphur-enriched fertilizer. It contains 20.6% Nitrogen, and as much as 24% Sulphur. So friends, apply it...and see. Plants won't turn yellow anymore, and mark it, both quality & quantity of harvest would be boosted up.

GSFC's Ammonium Sulphate—an invaluable fertilizer for crops like Wheat, Potato, Onion & Sugar-cane... definitely A-ONE!
