Abstract

This report contains estimates of world population from 1950 to the late 1980's, depending on the latest country census, and projections to 2050. It also shows annual rates of population growth for each country and region. According to the projections, world population will expand from an estimated 5.3 billion in 1990 to 6.3 billion in the year 2000 and to 10.7 billion in the year 2050. However, the world population rate of growth is expected to decline from 1.7 percent per year in the 1990's to 0.7 percent between 2040 and 2050. The information is provided for 204 countries, grouped into 14 geographic regions. It is a part of the Bureau of the Census population data bank used in the Economic Research Service (ERS).

Keywords: Population, population estimates, projections, population rates of growth, countries, regions.

Acknowledgment

We are indebted to Dr. Peter D. Johnson, Chief, Systems Analysis and Programming Staff, Center for International Research, Bureau of the Census, U.S. Department of Commerce, for keeping us informed of periodic changes in the world population data and making the series available to ERS.

World Population by Country and Region, 1950-2050

Francis Urban
Michael Trueblood

Introduction

This report contains estimates of world population from 1950 to the late 1980's and projections to the year 2050. The estimates are based entirely on the latest data provided by the Bureau of the Census, U.S. Department of Commerce. The data cover 204 countries and 14 geographic regions. Though the data span the period from 1950 to 2050, only 1960 to 1995 are shown here as annual series. Due to space limitations, 1950-1960 and 1995-2050 numbers are given in 5-year intervals. Data are shown in thousands, without decimals, since for many countries a decimal number would represent a spurious accuracy.

Most international population data originate with national governments, which conduct periodic population censuses, usually every 10 years. For some countries or geographic units, however, only estimates are available. This information is combined, with some adjustments, by the United Nations Statistical Office and the Bureau of the Census into two independent international population data banks. These two organizations also provide country-by-country population projections, currently to the year 2025 in the United Nations, and to the year 2050 in the Bureau of the Census. Some national governments also make population projections for their own use.

The data in this bulletin represent the most recent update of population series and projections by the Bureau of the Census. Such estimates are made for every country in the world based on the latest available information on national populations by age and sex, fertility, mortality, and international migration.

The Bureau of the Census and the United Nations current population numbers are similar, differing by less than 1 percent for the world. This difference increases to 2.4 percent in the numbers projected to 2025. The spread between the two series is much greater for individual countries and regions. For example, the population numbers for 1988 between the two series differed most for West Asia, 7.8 percent; followed by Central America, 6.1 percent; and then by Europe, Africa, and Southeast Asia, each nearly 2.0 percent. At the world level, however, these regional differences level out to a large extent. The Bureau of the Census numbers are generally higher than those of the United Nations. However, they are lower in Central America, South Asia, and Europe.

Because of differences between the two principal population data sources, the periodic updates of the Bureau of the Census numbers, and changing geographic composition of the world, this document has been prepared for ERS and USDA use, in hard copy and machine-readable form, to eliminate analytical consistency problems and to facilitate the use of the most recent numbers.

Countries and geographic units in this bulletin are generally the same as in the Bureau of the Census statistics. In particular, the People's Republic of China and Taiwan (Republic of China), as well as Greenland and Denmark were retained as separate units. Similarly Western Sahara (formerly Spanish Sahara), the West Bank, and Gaza Strip remain separate units. However, the population of Faeroe Islands (about 48,000 in 1990) was included in that of Denmark, and the population of the Channel Islands (Guernsey and Jersey, Sark and Alderny, 134,000 in 1990) and the Isle of Man (65,000 in 1990) were included in the United Kingdom.

This is the fourth ERS issue of the World Population series. The first one was issued in May 1984. While the historical series at that time depended mainly on the Bureau of the Census data, the projections were made in ERS using either the World Bank data, if available, or ERS estimated future growth rates. Starting with the second issue, however, dated March 1987, both the historical series and projections are those of the Bureau of the Census. However, the regional aggregations, data presented in 5-year intervals, and the length of the annual series are dictated by the requirements of ERS and USDA analysts.

The successive re-issues of the World Population since 1984 were necessitated by periodic, and occasionally drastic, revisions in the series by the Bureau of the Census in 1985, 1987, and 1989, and by continuing changes in the political map of the world. The most recent political changes include the separation of Aruba, now an independent state, from the Netherlands Antilles, and of Mayotte, a French dependency, from the independent state of Comoros. Also, the U.S. Trust Territory of the Pacific Islands was gradually dismantled between 1986 and 1988, forming the Northern Marianas, now a U.S. Commonwealth, and the Federated States of Micronesia and Marshall Islands, now both U.S. Freely Associated States. As of this writing, only Palau remains a Trust Territory. Its future status is to be decided by a plebiscite.

Tables in this bulletin indicate that the world population passed 5 billion people in 1987 and stands, as of this writing in 1990, at 5.3 billion. It is likely to pass the 10 billion mark in 2041.

It took humanity from the first appearance of man on earth to about 1790 to reach the first billion, but only about 130 years to reach the second billion in the 1920's and 45 years to reach the third billion in 1959. The fourth billion was reached in just 15 years, in 1973, and the fifth billion in 12 years. In about the same number of years we will reach the sixth billion in 1993. These numbers, however, already indicate a slowing down of the world population growth even though the number of people added annually seems large.

The absolute number of people added each year increased from 49 million in the 1950's to 84 million during the 1980's. It will probably increase to 95 million during the decade of the 1990's, before beginning to decline.

The world population growth rate peaked in the mid-1960's, after reaching the all-time high of 2.2 percent per year, and then began to decrease gradually to

the current 1.7 percent per year. By the year 2050, the annual rate of population growth is estimated to drop to about 0.6 percent, indicating that the world population may stabilize at about 10.5 billion people toward the year 2100 (see chart, next page).

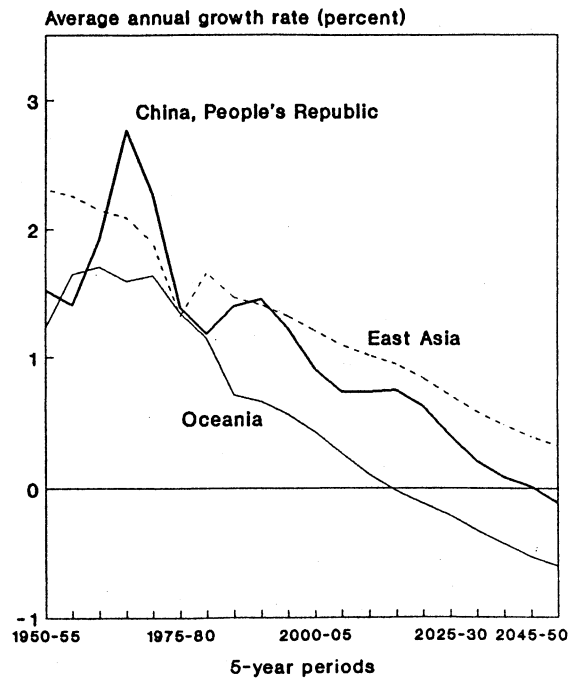

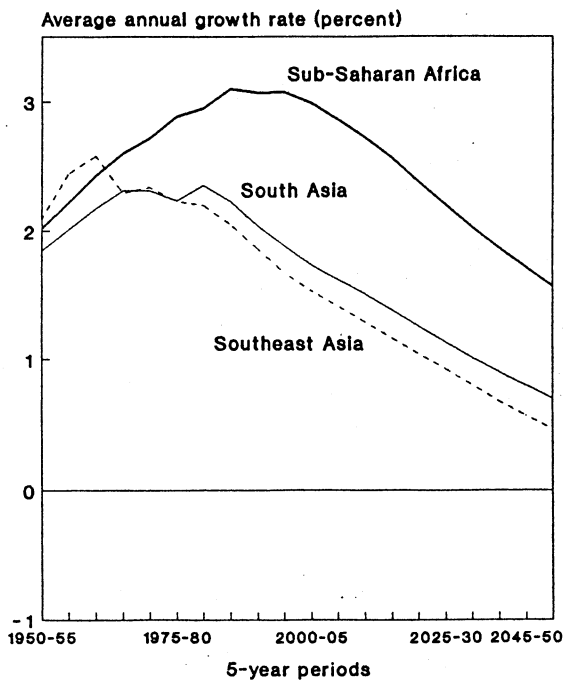

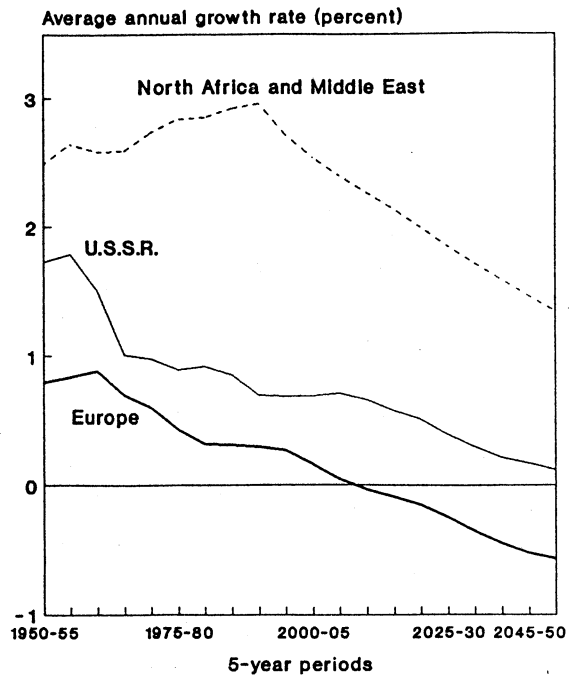

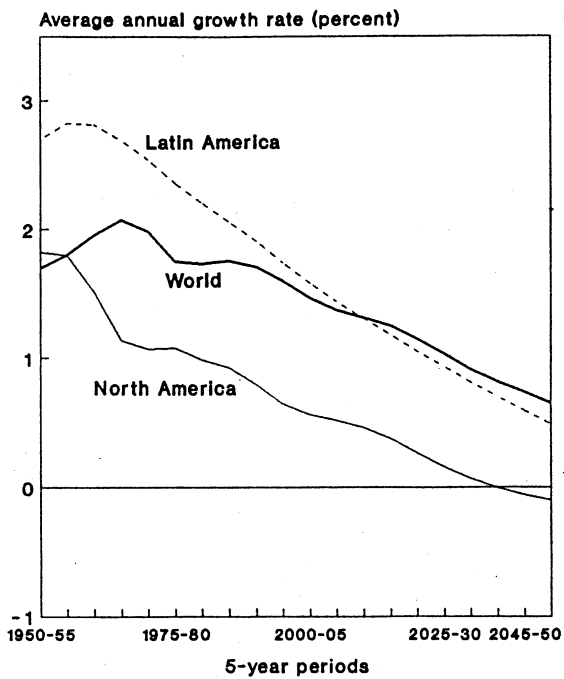

While the rate of population growth has been declining in most countries and regions, it is just reaching its estimated peak in Africa and the Middle East of 3.2 and 3.4 percent per year, respectively. By the middle of the next century, the rate of population growth in these two regions is still likely to be twice as high as in the other regions (see chart).

The data in this report represent a part of the population information in the International Data Base (IDB) machine-readable file maintained by the Bureau of the Census. Other population information in IDB includes population distribution by sex, age and age group, urban and rural population, economically active population by age, sex, and industry, life expectancy, school enrollment, and other categories. This information is available directly from the Bureau of the Census.

Countries included in the geographic regions shown in this bulletin represent the traditional post-World War II division of the world. However, in anticipation of the unification of the Federal Republic of Germany (West Germany) and the German Democratic Republic (East Germany), page 65 shows the numbers for the united Germany, Western Europe with the united Germany, and Eastern Europe without the German Democratic Republic.

For additional information on the series contained in this bulletin please contact Francis Urban or Michael Trueblood (202/786-1705).
