TO: Mr. William J. Lyons, Jr., Secretary-California Department of Food and Agriculture and
The Honorable Board of Supervisors

Ms. Gloria Cortez Keene, District, 1 Chairperson
Ms. Kathleen Crookham, District 2
Mr. Joe Rivero, District 3
Ms. Deidre Kelsey, District 4
Mr. Jerry O'Banion, District 5,

I am pleased to submit the Year 2000 Merced County Report of Agriculture. This annual report is produced in accordance with the provisions of Sections 2272 & 2279 of the California Food and Agriculture Code. The publication presents statistical information on the **acreage, yield, and gross value** of agricultural products produced in the County. It includes a brief **Sustainable Agriculture Report** which summarizes biological control, pest prevention, and pest detection activities in our county.

The 2000 total gross value of Merced County's leading industry posted a new high of \$1,538,538,000. This represents a slight 0.3% increase, \$4,512,000, above last year's highest ever gross value of production.

For 2000, the season started off with inclement weather for early crops and ended with near perfect fall harvesting weather. The growing season was cooler throughout than in a normal year.

The agricultural economy is in the worst financial condition that we've seen in many years. Profitability is the biggest challenge facing the Agriculture Industry today. Grower costs for services and supplies continue to increase, some astronomically, such as all types of energy. All the while, the return for most crops have fallen or not maintained pace with higher production costs. The only things keeping many growers in business have been Federal disaster payments and other government support or deficiency payments on several crops.

Cattle and calves, for the second year running showed an impressive gain in value, jumping to \$109,165,000, up \$38,586,000. The number of head marketed was up 110.5 % and price per hundredweight 16%. This is partially due to the fact that all of the dairy replacement heifer numbers are now included in the calculations.

Fresh market tomatoes posted a surprising second highest gain in value, \$36,171,000 for a total of \$81,136,000, helping move tomatoes into third place of all commodities. This was because of a 371 acre increase, yield up 13.3% per acre and price \$2.18 per 25 pound carton. Turkeys rebounded from last year to show the third highest increase of all commodities. They were valued at \$43,736,000, a \$20,679,000 increase as the number of birds grown was up 70.9 % and price six cents a pound.

Clingstone peaches was another bright spot in 2000, increasing to \$17,364,000 in value, up \$3,894,000. Acreage was down slightly, but yield increased 27% and price \$3.56 per ton. Other commodities showing small gains in total value included silage (corn), rice, fresh market chicken eggs and aquaculture (fish).

The top three crops in value the past few years, all took a beating in 2000. Milk, the county's leading commodity and consistent rising star, plunged \$28,074,000 slipping under one-half billion dollars in value to \$491,669,000. Even though production was up 10.8%, price was down 14.5 %, or \$1.95, per hundred weight. Almonds suffered a \$25,262,000 loss in value dropping to \$94,771,000 and from third place to fifth of all leading commodities. Even through price was up 10 cents pound, yield was down 500 pounds per acre.

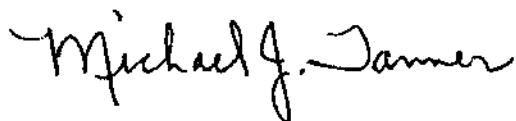

Chickens held onto second place while dropping \$10,818,000 in value to \$153,382,000. Production increased 1,704,405 birds, but price was down three cents per pound. Cotton slumped to \$69,830,000, losing \$6,070,000 in value. This was despite posting for the 2nd year in a row, another all-time high yield at 1545 pounds per acre, just over three bales of cotton. Acreage was up 2.7%, but price was a dismal 67.5 cents per pound.

Sugar beets fell \$5,894,000 in value to \$6,411,000. This is because acreage plummeted 53.5 % with the closing of two of the four sugarbeet processing plants in California. Only one plant remains in this area of the state. Yield increased 3.3 tons per acre with price down slightly. Processing tomatoes lost \$5,281,000 in value ending at \$31,495,000. Acreage dropped 2.6%, yield 4.6% and price \$4.47 per ton. Other commodities showing significant declines in total value included wine grapes, silage(other), irrigated pasture, pistachios and apricots.

This report addresses the acreage, production, and **gross value** of agricultural production in Merced County. It does not attempt to reflect net farm income or costs of production and marketing. This report also emphasizes an **average production and average value of gross receipts**. Value is based on farmgate prices, **except** for fresh packed commodities which reflect an FOB (free on board) price.

I wish to express my sincere appreciation for the cooperation and support of those persons who have provided the information and assistance necessary for my staff to compile this report under the direction of Mark Smith, Agricultural Biologist III. My thanks go to my staff and the growers and industry members of Merced County who truly make **AGRICULTURE** our number one and most valued industry.

Respectfully submitted,

Michael J. Tanner
Agricultural Commissioner

TO: Mr. William J. Lyons, Jr., Secretary-California Department of food and Agriculture and the Honorable Board of Directors

Ms. Gloria Cortez Keene, District 1
Ms. Kathleen Crookham, District 2
Mr. Joe Rivero, District 3, Chairperson
Ms. Deidre Kelsey, District 4
Mr. Jerry O'Banion, District 5

It is with great pleasure that I submit the 2001 Merced County Report of Agriculture. This annual publication is produced in accordance with the provisions of Section 2272 and 2279 of the California Food and Agriculture Code. This report presents statistical information on the **acreage, yield or number, and gross value** of Agricultural products produced in the County. It includes a brief **Sustainable Agriculture Report** which summarizes biological control, pest prevention, pest detection, pest eradication and organic farming activities in our County.

Agriculture continues to be the County's major producing renewable industry and has posted a new all-time high gross value of \$1,703,038,000 for the 2001 year. This represents a 10.7% increase, \$164,500,000 in gross value, over the 2000 figures. Merced County's diversified Agriculture continues to provide a very strong base for our local economy. Through the multiplier effect, it has a local economic impact in excess of 5.9 billion dollars.

The weather for the 2001 growing season was somewhat erratic with hot spells followed by colder times throughout much of the growing season. This had its affect on the yield for most of our crops, resulting in lower production per acre. The Agriculture economy, as a whole, continues to be in a slump financially, as profit margins on an acre or yield basis are slim to none for many commodities. Profitability remains the highest challenge facing the Agricultural Industry. However, farmers and ranchers are resilient and the industry will make a strong comeback within the next few years.

Milk continues its impressive climb in value and importance. After last year's decline, it roared back with a \$625,750,000 value. This is a gain of \$134,081,000 (27.3%) reflecting much improved market prices and increased production, (over 4.6%). Milk is by far the number one commodity produced in the county, representing 36.7% of the total gross agricultural value.

Cattle and Calves, for the third year running, are pulling out of poor times, and have regained third place of all commodities with a \$143,333,000 value. The number of head marketed was up 19.5% and price per hundred weight up 19.2%. Almonds, after slumping last year, have rebounded to a value of \$116,313,000. Price fell by 5 cents per pound, but yield was up 220 pounds per acre and 7,710 additional acres came into production.

The miscellaneous category of fruit and nut crops leaped in value by \$9,550,000 to \$20,460,000. Most specialty crops and other minor crops are included here and the value per ton was dramatically higher in 2001. Also, frozen fruit is now included in this category.

Other commodities showing significant gains in total value include silage corn, walnuts, turkeys, hay (grain), chickens (fryers & broilers) and silage (other).

After a stellar year in 2000, market tomatoes almost reversed in value, spiraling to \$51,133,000 and dropping tomatoes from third to fifth place in leading commodities. The \$30,003,000 was the greatest loss in value of a single commodity last year. The loss was due to a small reduction in acres planted, with yield down 11.7% and price lower by 27.2%.

Wine grapes continued to slide in value dropping by \$14,113,000 to \$24,567,000. This was the result of 12.5% lower production and price down 27.6%

Due to a major producer and packer going out of business, Cantaloupes posted the third highest drop falling to \$12,288,000. This was a \$5,001,000 loss due to 37.4% less acres and yield down 3.7%. Price was up 81 cents per carton.

Sweet potatoes suffered a \$4,375,000 decline, falling to \$52,914,000. Acreage was down 10.2% and yield 8.8%, however price was up 12.8%. Merced County ranks number one in sweet potato production in California with over 80% of the acreage.

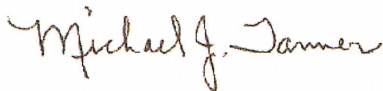

Other commodities showing significant declines in total value include pistachios, ostriches, apricots, clingstone peaches, sugar beets, fresh market chicken eggs and rice.

This report addresses the acreage, production, and gross value of Agriculture production in Merced County. It does not attempt to reflect net farm income or costs of production and marketing. This report also emphasizes an average production and average value of gross receipts. Value is based on farmgate prices, except for fresh packed commodities which reflect an FOB (free on board) price.

I wish to express my sincere appreciation for the cooperation and support of those persons who have provided the information and assistance necessary for my staff to compile this report under the direction of Mark Smith, Agricultural Biologist III. My thanks go to my staff and the growers and industry members of Merced County who truly make **AGRICULTURE** our number one and most valued industry.

This is my last Annual Crop Report as your County Agricultural Commissioner. It has been a grand experience and great pleasure for me to serve the wonderful Merced County Agriculture Industry and those involved for the past forty years.

Respectfully submitted,

Michael J. Tanner,
Agricultural Commissioner

ANNUAL

REPORT OF AGRICULTURE

2002

**MERCED COUNTY DEPARTMENT OF AGRICULTURE
MERCED, CALIFORNIA**

**DAVID A.ROBINSON, AGRICULTURAL COMMISSIONER
DANIEL CISMOWSKI, ASSISTANT AGRICULTURAL COMMISSIONER**

DEDICATION

MICHAEL J. TANNER

The 2002 Merced County Crop Report is dedicated to Michael J. Tanner, who served as Agricultural Commissioner, Director of Weights and Measures, and Director of Animal Control for 20 years. In his over 20 years of experience prior to being appointed Department Head in 1983, Mike steadily promoted through all the staff levels in the Agricultural Commissioner Division from seasonal inspector to Assistant Agricultural Commissioner.

During Mike's tenure as Agricultural Commissioner, Merced County gross agricultural commodity values increased from \$ 721,750,000 in 1983 (8th largest county in California) to \$ 1,730,722,000 in 2002 (5th largest county).

A native of Merced County, raised in a farming family, Mike's lifelong passion for local agriculture was always evident. His tireless efforts on behalf of Merced County's growers will be his lasting legacy. The staff at the Merced County Department of Agriculture thanks Mike for his many years of dedicated service and hopes he enjoys a well-earned retirement.

Demitrios O. Tatum
County Executive Officer

In accordance with the provisions of Sections 2272 and 2279 of the California Food and Agricultural Code, I am pleased to submit the 2002 Merced County Report of Agriculture. This report summarizes the acreage, production, and gross value of Merced County's agricultural commodities.

The total gross production value of Merced County agricultural commodities in 2002 was \$1,730,722,000. This represents a \$30,337,000 (1.78%) increase from 2001 production values.

Market milk continues to be our leading value commodity even though the price declined by \$3.09 per hundredweight. Even with increased production, the lower price resulted in a reduction in value of \$108,245,000. Chickens remained our number two value commodity posting a \$41,445,000 increase in value due to a \$0.08/pound increase in price and a slight increase in production. Cattle and Calves, impacted by lower prices and a reduction in the growth rate of the dairy herd, fell to fourth place in all commodities with a value of \$140,780,000.

The almond crop had its best yield in 20 years with an average of .95 tons per acre. The increased production, coupled with improved prices, raised the crop value by 52.5% to \$177,383,000.

Due to depressed market prices cotton acreage reached a 16 year low with only 54,730 acres planted, down from the high of 84,835 acres in 1996. Sweet potato acreage rose by 1009 acres to 9145 acres. Even with lower prices, the increased acreage combined with improved yield raised the value to \$67,068,000. Merced County continues to rank number one in sweet potato production in California.

These figures represent gross returns to the producer and do not take into account the costs of production, marketing, or transportation. Net income of the producer is not reflected in this report.

I wish to express my sincere thanks to our growers and ranchers, the staff of the University of California Cooperative Extension, industry representatives and the members of my staff who assisted in the gathering of data. In addition, I would like to thank Mark Smith, Mike Quinn and Jeannie Nelson. Without their hard work, the publication of this report would have been impossible.

Respectfully submitted,

David A. Robinson
Agricultural Commissioner

PEST ERADICATION

PEST (INSECT)	SOURCE	SCOPE OF PROGRAM TRAPS IN SERVICE
Pink Bollworm	Cotton	State operated trapping program on 54,730 acres, combined with plowdown enforcement or host free period.
Red Imported Fire Ant	Apples, Berries, Almonds, Beehives, Nursery Stock, Pasture	Initial discovery of this pest infestation occurred in Nov. 2001. During 2002, County personnel surveyed and trapped 8,233 acres. 18,454 trap inspections were made. A total of 4,300 acres has been found infested in the County. CDFA personnel made multiple insecticide applications to most of the infested acreage. Good results are already evident but survey and eradication efforts are expected to take another 3 to 4 years.
Sweet Potato Weevil	Sweet Potato	Successful eradication program completed in 1994. Resumed detection trapping program in 1996.
PEST (WEED)	SOURCE	SCOPE OF PROGRAM TRAPS IN SERVICE
Banana Waterlily	Waterways	None detected since eradication project in 1993.
Camelthorn	Rangeland/Pasture	Ongoing detection/eradication efforts Countywide.
Carolina Horse Nettle	Rangeland/Pasture	Ongoing detection/eradication efforts Countywide.
Hydrilla	Waterways	Ongoing detection.
Purple Mustard	Pasture/Roadways	Ongoing eradication efforts Countywide.
Water Hyacinth	Waterways	Ongoing eradication efforts - Merced River, San Joaquin, and tributaries.

Demitrios O. Tatum
County Executive Officer

Equal Opportunity Employer

In accordance with the provisions of Sections 2272 and 2279 of the California Food and Agricultural Code, I am pleased to submit the 2003 Merced County Report of Agriculture. This report summarizes the acreage, production, and gross value of Merced County's agricultural commodities.

The total gross production value of Merced County agricultural commodities in 2003 was \$1,918,231,000. This represents a \$187,509,000 (10.83%) increase from 2002 production values.

The price of market milk, our leading value commodity, increased by \$.44 per hundredweight (cwt) and volume increased by 1,864,559 cwt. The total value of market milk increased by \$41,765,000 over that of 2002. Chickens remained our number two value commodity posting a \$33,119,000 increase in value due to a \$.04/pound increase in price and a 30,324,452 pound increase in production. Cattle and Calve numbers improved this year, remaining in fourth place with a value of \$168,661,000. Due to strong consumer demand, lower production, and a \$.23 per dozen increase in price, the value of Chicken Eggs increased by \$9,941,000.

Almond crop yield backed off last year's high with an average of .81 tons per acre. However, higher prices raised the crop value by 19.44% to \$211,861,000.

Merced County, again for 2003, was ranked number one in sweet potato production in California. Sweet potato acreage rose by 392 acres to 9537 acres. The increased acreage, combined with improved prices raised the value by 32.98% to \$89,186,000. This year's market tomato price was one of the highest on record, with a \$2.62 increase per 25 pound carton. The market tomato value was \$81,298,000, a 44.93% increase.

These figures represent gross returns to the producer and do not take into account the costs of production, marketing, or transportation. Net income of the producer is not reflected in this report.

I wish to express my sincere thanks to our growers and ranchers, the staff of the University of California Cooperative Extension, industry representatives and the members of my staff who assisted in the gathering of data. In addition, I would like to thank Mark Smith and Jeannie Nelson. Without their hard work, the publication of this report would have been impossible.

Respectfully submitted,

David A. Robinson
Agricultural Commissioner

SUSTAINABLE AGRICULTURE REPORT

PEST PREVENTION

The California Food and Agricultural Code mandates pest prevention programs to prevent the introduction and spread of pests in California. Pest prevention involves Pest Exclusion, Pest Detection, Pierce's Disease Control, and the Federal Phytosanitary Certification Program.

Pest Exclusion Program:

Pest Exclusion is the first line of defense to prevent the introduction of pests, injurious to agriculture, that are not of common occurrence in Merced County.

A total of 6,643 inspections of incoming plant material were made in 2003. Shipments are inspected at United Parcel Service, United States Post Offices, Federal Express and incoming trucks. 66 shipments were rejected, 8 for the presence of significant agricultural pests. These shipments were infested with 2 "A"-Rated (pests of agricultural importance not known to occur in California) and 6 "Q"-Rated pests (pests of unknown agricultural importance not known to occur in California). The other 58 rejections were for other live pests, material not properly certified, or improper container markings.

Listed below are the A- and Q-rated pests intercepted in 2003:

Magnolia White Scale A-Rated	Leech Q-Rated	Physidae Snail Q-Rated	Unilobed Scale Q-Rated
Red Imported Fire Ant A-Rated	Pyralidae Moth Q-Rated	Polygyridae Snail Q-Rated	Various Aquatic Plants Q-Rated

Pierce's Disease Control Program:

To prevent the introduction of the Glassy-winged Sharpshooter (GWSS) into Merced County, all shipments of nursery stock from infested counties are inspected. GWSS has the ability to spread **Pierce's Disease** rapidly among grape vines with devastating results. 1,111 shipments of nursery stock from infested counties were inspected in 2003. One shipment was found to have viable egg masses. It was rejected and returned to point of origin.

Federal Phytosanitary Certification Program:

This program prevents the spread of injurious pests from Merced County to foreign countries through inspection and certification of exported plants and plant commodities. In 2003, 3,993 export shipments were inspected and issued **Phytosanitary Certificates**.

Pest Detection Program:

Pest Detection uses visual inspection and insect traps that target specific exotic insects of high agricultural and economic importance.

The trapping program in Merced County targeted the following pests:

Apple Maggot (<i>Rhagoletis pomonella</i>)	European Corn Borer (<i>Ostrinia nubilalis</i>)
European Pine Shoot Moth (<i>Rhyacionia buoliana</i>)	Gypsy Moth (<i>Lymantria dispar</i>)
Glassy-winged Sharpshooter (<i>Homalodisca coagulata</i>)	Japanese Beetle (<i>Popillia japonica</i>)
Khapra Beetle (<i>Trogoderma granarium</i>)	Mediterranean Fruit Fly (<i>Ceratitis capitata</i>)
Melon Fly (<i>Dacus cucurbitae</i>)	Mexican Fruit Fly (<i>Anastrepha ludens</i>)
Oriental Fruit Fly (<i>Dacus dorsalis</i>)	Sweet Potato Weevil (<i>Cylas formicarius elegantulus</i>)

A total of 1,810 pest detection traps were placed in Merced County and inspected a total of 19,949 times during the 2003 trapping season.

Three special surveys were conducted in 2003, in response to exclusion alerts received from the California Department of Food and Agriculture (CDFA), and any product found was rejected and removed from the marketplace: These surveys include:

- Manzano peppers from Mexico, Guatemala, and Belize due to the discovery of *Anastrepha sp.* larvae infesting the fruit in a shipment from Mexico;
- Potpourri pinecones from India due to the interception of live wood-boring beetle larvae (*Cerambycidae*); and
- Ya pears from China due to the detection of *Alternaria sp.* (a serious fungal disease).

PEST ERADICATION

The **Pest Eradication Program** endeavors to eliminate infestations of significant agricultural pests with limited distribution before they are able to cause ongoing economic cost to California agriculture.

Both ongoing eradication efforts directed toward current infestations and detection of previously eradicated pests were conducted in Merced County during 2003.

Ongoing eradication efforts include Pink Bollworm, Red Imported Fire Ant, and Purple Mustard.

The Pink Bollworm is a significant cotton pest with eradication efforts consisting of a State operated detection trapping program in conjunction with County enforcement of the host-free period from January 1 through March 9. In 2003 63,685 acres were trapped for Pink Bollworm. Two notices of violation were issued by the Merced County Agricultural Commissioner for 74 acres of cotton that were not plowed down before January 1, 2004.

Initial discovery of a Red Imported Fire Ant infestation occurred in Nov. 2001. A total of 4,300 acres has been found infested in the County. CDFA personnel made multiple insecticide applications to most of the infested acreage During 2003. County personnel surveyed and trapped 243 locations. 3,386 inspections were made. Good progress toward eradication is evident but survey and eradication efforts are expected to take another 2 to 3 years.

Ongoing detection and eradication efforts continue for Purple Mustard. Ongoing detection efforts continue for Camelthorn, Carolina Horse Nettle, and Hydrilla.

Successful eradication projects include Sweet Potato Weevil and Banana Waterlily. None have been detected since the end of their respective eradication projects.

BIOLOGICAL CONTROL

The **Biological Control (Biocontrol) Program** uses natural enemies to suppress pest populations to economically and environmentally acceptable levels. Once the biocontrol agent becomes established it is self-perpetuating, reducing the need to use pesticides. The following are pests found in Merced County and their Biocontrol Agents.

PEST	ORGANISM
Ash Whitefly (<i>Siphoninus phillyreae</i>)	Parasitoid Wasp (<i>Encarsia inaron</i>)
Grapeleaf Skeletonizer (<i>Harrisina brillians</i>)	Parasitic Fly (<i>Ametadoria misella</i>) Virus (<i>WGLS Granulosis</i>) Parasitic Wasp (<i>Apanteles harrisinae</i>)
Italian Thistle (<i>Carduus sp.</i>)	Seed-Head Weevil (<i>Rhinocyllus conicus</i>)
Klamath Weed (<i>Hypericum perforatum</i>)	Leaf Beetle (<i>Chrysolina quadrigemina</i>)
Milk Thistle (<i>Silybum marianum</i>)	Seed-Head Weevil (<i>Rhinocyllus conicus</i>)
Puncture Vine (<i>Tribulus terrestris</i>)	Seed Weevil (<i>Microlarinus lareynii</i>) Stem Weevil (<i>Microlarinus lypriformis</i>)
Red Gum Lerp Psyllid (<i>Glycaspis brimblecombei</i>)	Parasitoid Wasp (<i>Psyllaephagus bliteus</i>)
Russian Thistle (<i>Salsola sp.</i>)	Case-bearer Moth (<i>Coleophora klimeschiella</i>) Russian Thistle Borer (<i>Coleophora parthenica</i>)
Yellowstar Thistle (<i>Centaurea solstitialis</i>)	Seed-Head Weevil (<i>Bangasternus orientalis</i>) Seed-Head Gall Fly (<i>Urophora sirunaseva</i>) Hairy Weevil (<i>Eustenopus villosus</i>) False Peacock Fly (<i>Chaetorellia succinea</i>) Flower Weevil (<i>Larinus curtus</i>)

ORGANIC FARMING

Merced County had 40 registered growers of organic commodities in 2003. These growers farmed 1,654 acres to produce organic alfalfa, almonds, apricots, Asian pears, cherries, nectarines, peaches, pecans, pistachios, plums (fresh and dried), pluots, raisins, walnuts, beans, squash, leafy lettuce, legumes, sweet potatoes, and tomatoes. There were also 5 facilities producing organic chicken eggs and milk.

Demitrios O. Tatum
County Executive Officer

In accordance with the provisions of Sections 2272 and 2279 of the California Food and Agricultural Code, I am pleased to submit the 2004 Merced County Report of Agriculture. This report summarizes the acreage, production, and gross value of Merced County's agricultural commodities.

For the first time, Merced County agriculture surpassed the 2 billion dollar mark in gross production value of agricultural commodities. With a gross production value of \$2,365,494,000 in 2004, Merced County agricultural commodities increased \$447,263,000 (23.32%) from 2003 production values.

This increase is due largely to an increase in price on some of our leading commodities such as: milk, almonds, chickens, and livestock. The price of milk (the county's number one commodity) increased by \$3.44/cwt for market milk and \$3.38/cwt for manufacturing milk. This along with a slight increase in production raised the overall value by \$185,930,000, a 33.4% increase over the 2003 value. The value of the almond crop increased \$104,074,000 over the 2003 value. This represents a 49.1% increase in value which allowed almonds to recapture the number two commodity spot. Chickens dropped to third position even though they had a price increase of \$0.13/lb, with an overall increase in value of \$70,496,000.

The 2004 growing season was also very conducive to high yield production with both cotton and processing tomatoes reaching all time highs of 3.42 bales/acre and 41.0 tons/acre respectively. Egg production in Merced County also increased, due to major laying facility expansions facilitated by favorable market conditions over the last two years as well as reduced production in Southern California.

These figures represent gross returns to the producer and do not take into account the costs of production, marketing, or transportation. Net income of the producer is not reflected in this report.

I wish to express my sincere thanks to our growers and ranchers, the staff of the University of California Cooperative Extension, industry representatives and the members of my staff who assisted in the gathering of data. In addition, I would like to thank Mark Smith, Mike Quinn, Jeannie Nelson and Maryann Harding. Without their hard work, the publication of this report would have been impossible.

Respectfully submitted,

David A. Robinson
Agricultural Commissioner

TWELVE LEADING FARM COMMODITIES 2004

1.	MILK ⁽¹⁾	\$742,785,000	(1)
2.	ALMONDS (KERNEL BASIS)	\$315,935,000	(3)
3.	CHICKENS	\$300,558,000	(2)
4.	CATTLE AND CALVES	\$209,041,000	(4)
5.	TOMATOES ⁽²⁾	\$105,098,000	(5)
6.	COTTON (LINT)	\$85,478,000	(8)
7.	SWEET POTATOES	\$79,182,000	(6)
8.	HAY (ALFALFA)	\$71,500,000	(7)
9.	EGGS, CHICKEN (MARKET)	\$68,508,000	(9)
10.	TURKEYS	\$50,043,000	(10)
11.	SILAGE (CORN)	\$47,862,000	(11)
12.	ALL NURSERY PRODUCTS	\$30,354,000	(12)

(The numbers in parenthesis denotes the 2003 ranking)

(1) Includes Market and Manufacturing.

(2) Includes Market and Processing Tomatoes.

2004 SUSTAINABLE AGRICULTURE REPORT

PEST PREVENTION

The California Food and Agricultural Code mandates pest prevention programs to prevent the introduction and spread of pests in California. Pest prevention involves Pest Exclusion, Pest Detection, Pierce's Disease Control, and the Federal Phytosanitary Certification Program.

Pest Exclusion Program:

Pest Exclusion is the first line of defense to prevent the introduction of pests, injurious to agriculture, that are not of common occurrence in Merced County.

A total of 5,077 shipments of incoming plant material were inspected in 2004. Shipments are inspected at United Parcel Service, United States Post Offices, Federal Express and trucking terminals. 24 shipments were rejected, 4 for the presence of significant agricultural pests. Three shipments were infested with Red Imported Fire Ant, considered an "A"-Rated pest of agricultural importance under active eradication in California. One shipment contained unidentified "Q"-Rated plants (pests of unknown agricultural importance not known to occur in California). The other 20 rejections were for other live pests, material not properly certified, or improper container markings.

Pierce's Disease Control Program:

To prevent the introduction of the Glassy-winged Sharpshooter (GWSS) into Merced County, all shipments of nursery stock from infested counties are inspected. GWSS has the ability to spread **Pierce's Disease** rapidly among grape vines with devastating results. 1,142 shipments of nursery stock from infested counties were inspected in 2004. All inspections were negative for the presence of GWSS during 2004.

Federal Phytosanitary Certification Program:

This program prevents the spread of injurious pests from Merced County to foreign counties through inspection and certification of exported plants and plant commodities. In 2004, 4,099 export shipments were inspected and issued **Phytosanitary Certificates**.

Pest Detection Program:

Pest Detection uses visual inspection and insect traps that target specific exotic insects of high agricultural and economic importance.

The trapping program in Merced County targeted the following pests:

Apple Maggot (<i>Rhagoletis pomonella</i>)	European Corn Borer (<i>Ostrinia nubilalis</i>)
European Pine Shoot Moth (<i>Rhyacionia buoliana</i>)	Gypsy Moth (<i>Lymantria dispar</i>)
Glassy-winged Sharpshooter (<i>Homalodisca coagulata</i>)	Japanese Beetle (<i>Popillia japonica</i>)
Khapra Beetle (<i>Trogoderma granarium</i>)	Mediterranean Fruit Fly (<i>Ceratitidis capitata</i>)
Melon Fly (<i>Dacus cucurbitae</i>)	Mexican Fruit Fly (<i>Anastrepha ludens</i>)
Oriental Fruit Fly (<i>Dacus dorsalis</i>)	Sweet Potato Weevil (<i>Cylas formicarius elegantulus</i>)
Vine Mealybug (<i>Planococcus ficus</i>)	

A total of 1,873 pest detection traps were placed in Merced County and inspected a total of 19,139 times during the 2004 trapping season.

PEST ERADICATION

The **Pest Eradication Program** endeavors to eliminate infestations of significant agricultural pests with limited distribution before they are able to cause ongoing economic cost to California agriculture.

Ongoing detection and eradication efforts continued during 2004 for Pink Bollworm, Red Imported Fire Ant, Purple Mustard, and Water Hyacinth.

Ongoing detection efforts continue for Camelthorn, Carolina Horse Nettle, and Hydrilla.

Successful eradication projects include Sweet Potato Weevil and Banana Waterlily. None have been detected since the end of their respective eradication projects.

The Pink Bollworm is a significant cotton pest with eradication efforts consisting of a State operated detection trapping program in conjunction with County enforcement of the host-free period from January 1 through March 10. In 2004, 69,205 acres were trapped for Pink Bollworm. No Merced County growers were found to be in violation of the host-free period requirement during 2004.

Merced County's Red Imported Fire Ant (RIFA) eradication program started in November 2001. At the height CDFA had 4,300 acres under treatment. Very good progress is being made toward eradication. At the end of 2004, 600 acres were still under treatment with the rest of the acreage under intensive post treatment survey. County personnel surveyed and trapped an additional 74 locations. 6,225 baited trap inspections were made.

BIOLOGICAL CONTROL

The **Biological Control (Biocontrol) Program** uses natural enemies to suppress pest populations to economically and environmentally acceptable levels. Once the biocontrol agent becomes established it is self-perpetuating, reducing the need to use pesticides. The following are pests found in Merced County and their Biocontrol Agents.

PEST	ORGANISM
Ash Whitefly (<i>Siphoninus phillyreae</i>)	Parasitoid Wasp (<i>Encarsia inaron</i>)
Grapeleaf Skeletonizer (<i>Harrisina brillians</i>)	Parasitic Fly (<i>Ametadoria misella</i>) Parasitic Wasp (<i>Apanteles harrisinae</i>) Virus (<i>WGLS Granulosis</i>)
Itallian Thistle (<i>Carduus sp.</i>)	Seed-Head Weevil (<i>Rhinocyllus conicus</i>)
Klamath Weed (<i>Hypericum perforatum</i>)	Leaf Beetle (<i>Chrysolina quadrigemina</i>)
Milk Thistle (<i>Silybum marianum</i>)	Seed-Head Weevil (<i>Rhinocyllus conicus</i>)
Puncture Vine (<i>Tribulus terrestris</i>)	Seed Weevil (<i>Microlarinus lareynii</i>) Stem Weevil (<i>Microlarinus lypriformis</i>)
Red Gum Lerp Psyllid (<i>Glycaspis brimblecombei</i>)	Parasitoid Wasp (<i>Psyllaephagus bliteus</i>)
Russian Thistle (<i>Salsola sp.</i>)	Case-bearer Moth (<i>Coleophora klimeschiella</i>) Russian Thistle Borer (<i>Coleophora parthenica</i>)
Yellowstar Thistle (<i>Centaurea solstitialis</i>)	False Peacock Fly (<i>Chaetorellia succinea</i>) Flower Weevil (<i>Larinus curtus</i>) Hairy Weevil (<i>Eustenopus villosus</i>) Rust Fungus (<i>Puccinia jaceae var. solstitialis</i>) Seed-Head Gall Fly (<i>Urophora sirumaseva</i>) Seed-Head Weevil (<i>Bangasternus orientalis</i>)

This is an encarsia wasp that parasitizes the ash whitefly. The ash whitefly is a pest of many types of trees in California.

ORGANIC FARMING

Merced County has 52 registered growers of organic commodities. These growers farmed 1,863 acres to produce organic alfalfa, almonds, apricots, Asian pears, cherries, nectarines, peaches, pecans, pistachios, plums (fresh and dried), pluots, raisins, walnuts, beans, squash, leafy lettuce, legumes, sweet potatoes, and tomatoes. There are also 5 facilities producing organic chicken eggs and milk.

MERCED COUNTY AGRICULTURAL FACTS *

- 81.5% of the land area in Merced County is farmland.
- There are a total of 2,964 farms, averaging 339 acres, for a total of 1,006,127 acres of farmland in Merced County.
- The total county acreage is 1,234,364 acres.
- The average age of Merced County farmers is 54.9 years old.

* Above data is from the USDA 2002 California Census of Agriculture.

ANNUAL

REPORT OF AGRICULTURE

2005

**MERCED COUNTY'S SESQUICENTENNIAL
1855 – 2005**

The County of Merced celebrated its 150 year anniversary in 2005. In April 2005, the Merced County Courthouse Museum, along with other museums and historical societies in the county, collectively put together a historical presentation displaying the county's history.

The Agricultural Commissioner's Office would like to thank Sarah Lim, Courthouse Museum Director, and her staff for all their help in assisting us with the pictures that you see in the 2005 Crop Report.

The Merced County Courthouse, which was built in 1875, is one of the oldest historical buildings in California. The building was built by State Capitol Architect, Albert A. Bennett and is Italianate in style.

The Honorable Board of Supervisors County of Merced

Mike Nelson, Chairman

Kathleen Crookham Deidre Kelsey

Jerry O'Banion John Pedrozo

Demitrios O. Tatum
County Executive Officer

In accordance with the provisions of Sections 2272 and 2279 of the California Food and Agricultural Code, I am pleased to submit the 2005 Merced County Report of Agriculture. This report summarizes the acreage, production, and gross value of Merced County's agricultural commodities.

Last year Merced County agriculture surpassed the 2 billion dollar mark in gross production value of agricultural commodities for the second consecutive year. With a gross production value of \$2,390,367,000 in 2005, Merced County agricultural commodities increased \$24,873,000 (1.05%) from 2004 production values.

The price of milk dropped slightly in 2005 resulting in a reduction in value of \$30,898,000, however milk remains the county's number one commodity with an overall value of \$711,887,000. Chickens regained the number two spot over almonds with a total value of \$299,685,000; down slightly from last year's figure of \$300,558,000. Almonds came in at number three in 2005 with a value of \$292,995,000; down from last year's value of \$315,935,000. Almond's price increase of \$0.55/pound was not enough to offset the drop in production of .21 tons/acre. The commodity with the largest increase in overall value for 2005 was cattle & calves (the fourth leading commodity). Due mainly to higher prices it increased by \$62,480,000 for a total value of \$271,521,000. Egg production in Merced County continued to increase, due to more laying facility expansions coming on line in 2005. The market egg price dropped \$0.10/dozen, but with the increased production the overall value of chicken eggs rose by \$6,771,000 to \$75,279,000.

The 2005 growing season was plagued by multiple rain events from mid February through mid May severely impacting almond pollination, cherry harvest, and strawberry harvest. Tomato yields were adversely impacted by cool wet weather in late spring and by several hot spells later in the growing season that resulted in reduced setting of fruit, primarily to processing tomatoes. Cotton yields were also down due to rain and cool weather right after planting and by very high temperatures for extended periods of time in July and early August, which damaged young boll formation.

These figures represent gross returns to the producer and do not take into account the costs of production, marketing, or transportation. Net income of the producer is not reflected in this report.

I wish to express my sincere thanks to our growers and ranchers, the staff of the University of California Cooperative Extension, industry representatives and the members of my staff who assisted in the gathering of data. In addition, I would like to thank Mark E. Smith, Mike Quinn, Maryann Harding, and Terri Cruickshanks. Without their hard work, the publication of this report would have been impossible.

Respectfully submitted,

David A. Robinson
Agricultural Commissioner

2005 SUSTAINABLE AGRICULTURE REPORT

PEST PREVENTION

The California Food and Agricultural Code mandates pest prevention programs to prevent the introduction and spread of pests in California. Pest prevention involves Pest Exclusion, Pest Detection, Pierce's Disease Control, and the Federal Phytosanitary Certification Program.

Pest Exclusion Program:

Pest Exclusion is the first line of defense to prevent the introduction of pests, injurious to agriculture, that are not of common occurrence in Merced County.

A total of 6,257 shipments of incoming plant material were inspected in 2005. Shipments are inspected at United Parcel Service, United States Post Offices, Federal Express and trucking terminals. 29 shipments were rejected. Two of the shipments rejected were infested with Red Imported Fire Ant, considered an "A"-Rated pest of agricultural importance not known to occur in California. The other 27 rejections were for other live pests, material not properly certified, or improper container markings.

Seed inspection during 2005 detected the presence of "B"-Rated Jointed Goatgrass (*Aegilops cylindrica*) seed contamination in forage crop seed mixture, which had been planted in four fields totaling 312 acres in Merced County. Jointed Goatgrass is a potential major pest of small grain crops, primarily wheat. "B"-Rating indicates a pest with limited distribution in the State with eradication at the discretion of the county agricultural commissioner. Since there is no known establishment of Jointed Goatgrass in Merced County, the planted fields were placed under compliance agreement to control any potential movement of seed from the planted fields. With the assistance of the California Department of Food and Agriculture, the 4 fields were visually surveyed three times in 2005 and no Jointed Goatgrass plants were discovered. Additional survey is planned in 2006 to verify that the Jointed Goatgrass did not become established in Merced County.

Pierce's Disease Control Program:

To prevent the introduction of the Glassy-winged Sharpshooter (GWSS) into Merced County, all shipments of nursery stock from infested counties are inspected. GWSS has the ability to spread **Pierce's Disease** rapidly among grape vines with devastating results. 947 shipments of nursery stock from infested counties were inspected in 2005. One shipment was found to contain viable GWSS eggs. The shipment was rejected and returned to origin.

In addition, all nurseries in the county and 2,161 residential yards were visually inspected for GWSS presence during 2005. No GWSS was detected.

Federal Phytosanitary Certification Program:

This program prevents the spread of injurious pests from Merced County to foreign countries through inspection and certification of exported plants and plant commodities. In 2005, 3,492 export shipments were inspected and issued **Phytosanitary Certificates**.

Pest Detection Program:

Pest Detection uses visual inspection and insect traps that target specific exotic insects of high agricultural and economic importance.

The trapping program in Merced County targeted the following pests:

Apple Maggot (<i>Rhagoletis pomonella</i>)	European Corn Borer (<i>Ostrinia nubilalis</i>)
European Pine Shoot Moth (<i>Rhyacionia buoliana</i>)	Gypsy Moth (<i>Lymantria dispar</i>)
Glassy-winged Sharpshooter (<i>Homalodisca coagulata</i>)	Japanese Beetle (<i>Popillia japonica</i>)
Khapra Beetle (<i>Trogoderma granarium</i>)	Mediterranean Fruit Fly (<i>Ceratitidis capitata</i>)
Melon Fly (<i>Dacus cucurbitae</i>)	Mexican Fruit Fly (<i>Anastrepha ludens</i>)
Oriental Fruit Fly (<i>Dacus dorsalis</i>)	Sweet Potato Weevil (<i>Cylas formicarius elegantulus</i>)
Vine Mealy Bug (<i>Planococcus ficus</i>)	

A total of 1,796 pest detection traps were placed in Merced County and inspected a total of 18,838 times during the 2005 trapping season.

PEST ERADICATION

The **Pest Eradication Program** endeavors to eliminate infestations of significant agricultural pests with limited distribution before they are able to cause ongoing economic cost to California agriculture.

Ongoing detection and eradication efforts continued during 2005 for Pink Bollworm, Red Imported Fire Ant, Purple Mustard, and Water Hyacinth.

Ongoing detection efforts continue for Camelthorn, Carolina Horse Nettle, and Hydrilla.

Successful eradication projects include Sweet Potato Weevil and Banana Waterlily. None have been detected since the end of their respective eradication projects.

The Pink Bollworm is a significant cotton pest with eradication efforts consisting of a State operated detection trapping program in conjunction with County enforcement of the host-free period from January 1 through March 10. In 2005, 63,670 acres were trapped for Pink Bollworm. No Merced County growers were found to be in violation of the host-free period requirement during 2005.

Merced County's Red Imported Fire Ant (RIFA) eradication program started in November 2001. At the height the California Department of Food and Agriculture had 4,300 acres under treatment. Very good progress is being made toward eradication. At the end of 2005, 550 acres were still under treatment with the rest of the acreage under intensive post treatment survey. Post treatment survey was completed on 430 acres and restrictions on these fields lifted. County personnel surveyed and trapped an additional 92 locations. 5,902 baited trap inspections were made.

BIOLOGICAL CONTROL

The **Biological Control (Biocontrol) Program** uses natural enemies to suppress pest populations to economically and environmentally acceptable levels. Once the biocontrol agent becomes established it is self-perpetuating, reducing the need to use pesticides. The following are pests found in Merced County and their Biocontrol Agents.

PEST	ORGANISM
Ash Whitefly (<i>Siphoninus phillyreae</i>)	Parasitoid Wasp (<i>Encarsia inaron</i>)
Grapeleaf Skeletonizer (<i>Harrisina brillians</i>)	Parasitic Fly (<i>Ametadoria misella</i>) Virus (<i>WGLS Granulosis</i>) Parasitic Wasp (<i>Apanteles harrisinae</i>)
Italian Thistle (<i>Carduus sp.</i>)	Seed-Head Weevil (<i>Rhinocyllus conicus</i>)
Klamath Weed (<i>Hypericum perforatum</i>)	Leaf Beetle (<i>Chrysolina quadrigemina</i>)
Milk Thistle (<i>Silybum marianum</i>)	Seed-Head Weevil (<i>Rhinocyllus conicus</i>)
