This paper is published by the Department of Agricultural Economics, Michigan State University (MSU), in collaboration with the Senegal Agricultural Research Institute (ISRA), under the Senegal Agricultural Research and Planning Contract 685-0223-C-00-1064-00 at Michigan State University funded by the U.S. Agency for International Development (USAID), Dakar, Senegal.

## PREFACE

In 1982 the faculty and staff of the Department of Agricultural Economics at Michigan State University (MSU) began the first phase of a planned 10 to 15 year project to collaborate with the Senegal Agricultural Research Institute (ISRA, Institut Sénégalais de Recherches Agricoles) in the reorganization and reorientation of its research programs. The Senegal Agricultural Research and Planning Project (Contract 685-0223-C-00-1064-00), has been financed by the U.S. Agency for International Development, Dakar, Senegal.

As part of this project MSU managed the Master's degree programs for 21 ISRA scientists at 10 U.S. universities in 10 different fields, including agricultural economics, agricultural engineering, soil science, animal science, rural sociology, biometrics and computer science. Ten MSU researchers, on long-term assignment with ISRA's Department of Production Systems Research (PSR, Département de Recherches sur les Systemés de Production et le Transfert de Technologies en Milieu Rural) or with the Macro-Economic Analysis Bureau (BAME, Bureau d'Analyses Macro-Economiques) have undertaken research in collaboration with ISRA scientists on the distribution of agricultural inputs, cereals marketing, food security, farm-level production strategies and agricultural research and extension. MSU faculty have also advised junior ISRA scientists on research in the areas of animal traction, livestock systems and farmer groups.

Additional MSU faculty members from the Department of Agricultural Economics, Sociology, Animal Science and the College of Veterinary Medicine have served as short-term consultants and professional advisors to several ISRA research programs.

The project has organized several short-term, in-country training programs in farming systems research, agronomic research at the farm-level and field-level livestock research. Special training and assistance has

also been provided to expand the use of micro-computers in agricultural research, to improve English language skills, and to establish a documentation and publications program for PSR Department and BAME researchers.

This document lists 100 titles of publications made available by Michigan State University under the Senegal Agricultural Research and Planning Project to ISRA scientists working at the three research centers located in Djibelor, Kaolack and St. Louis and to the Documentation Unit of the Department of Agrarian Systems and Agricultural Economics Research in Dakar. These publications have been selected in collaboration with ISRA scientists and their availability at research centers throughout the country should contribute to strengthening Senegal's agricultural research programs.
