1) Excluding forestry and fisheries.

2) Calculated at farm prices (i.e. market prices less marketing costs) and includes production of Europeans and non-Europeans.

3) Since 1949/50 estimates have been based on census figures; for previous years figures were estimated with the aid of an index compiled from local production and imports of the main farming requisites.

4) Contribution to gross domestic production: Farm value of agricultural production plus/minus value of net change in livestock inventories minus value of animal feed and seed originating from the agricultural sector minus value of production goods and services bought.

5) Calculations based on annual revaluation of capital assets, at 10% p.a. on machinery, implements and vehicles, and 2% p.a. on fixed improvements. These estimates are made according to calendar years and converted a July-June year on a fifty-fifty basis. Depreciation on dwellings is included.

6) Preliminary.
