Prairie, Sm. Square, Good Northeast Nebraska, ton. . . . .	70.00	*	57.50
* No market.			

Dairy producers are more prone to production, marketing and financial risks than ever because they have few marketing alternatives, despite the highly volatile milk prices. Considering the precarious situation that dairy farmers face, USDA's Risk Management Agency (RMA) has launched a novel cost-share program in select states and counties across the nation that allows farmers to try and use futures and options markets. The program, Dairy Options Pilot Program (DOPP), at a cost of \$11 million is a first of its kind. Launched under the 1996 FAIR Act, it was first announced on June 8, 1998 by the Secretary of Agriculture, Dan Glickman. The program helps dairy producers to create their own financial safety net by purchasing exchange-traded options on the price of their milk.

**Eligibility:** Any producer who operates a dairy farm in the selected counties where the program is implemented and produces at least 100,000 pounds of milk over a six-month period is eligible to participate in the program. Apart from the producers, licensed brokers who are in good standing with the National Futures Association (NFA) are eligible for participation.

**Program Details:** The program is covered for a period of 6-8 months for each producer, during which time each producer will purchase options up to a maximum of 600,000 pounds of milk. The option contract works like a price insurance, i.e., when the milk prices fall below the floor/strike price purchased, the option contract increases in value and the producer gains. This helps the producer cover the price risks in the periods of prolonged low prices that hamper the

cash flow on a farm. The program is highly subsidized by the Department of Agriculture. During the program participation the producer is responsible for 20% of the premium cost of each option and the other 80% of the premium, as well as the broker fee (\$30 per option) is picked up by USDA. The program also mandates a 4-hour training program in each county that gives an overview on options, broker selection, dairy market analysis and negotiation of commissions.

The counties and states selected for the first phase of implementation are based on dairy concentration and diversity in operations. The first phase of implementation was done in California, Minnesota, New York, Pennsylvania, Wisconsin, Vermont and Texas. In the second round, 25 other states have been included and the program has been extended to other

counties in the states. The first phase has been implemented in Gage county in Nebraska, and has been scheduled for implementation in the second round.
