LIBRARY

ABSTRACT

Gunn, Charles R. 1983. A nomenclator of legume (Fabaceae) genera. U.S. Department of Agriculture Technical Bulletin No. 1680, 224 pp.

The 2,805 legume generic names published from 1753 to 1982 are annotated according to the taxonomic and phylogenetic frameworks established in "Advances in Legume Systematics," compiled in 1981 by R. M. Polhill and P. H. Raven as the second volume of the Proceedings of the International Legume Conference at Kew, England. Legume generic names, including fossils, are presented in seven lists and suprageneric names in the eighth list. Generic annotations include author, subtribe, tribe, subfamily, phylogenetic number, number of species in the genus, natural distribution by geographic region, original publication citation, and synonyms.

KEYWORDS: Caesalpinioideae, Fabaceae, Faboideae, fossil legume genus, genera, generic name, generic synonym, legume, Leguminosae, Mimosoideae, nomenclator, Papilionoideae, subtribe, tribe.

ACKNOWLEDGMENTS

I appreciate the advice and comments of R. C. Barneby, New York Botanical Garden, New York; H. D. L. Corby, Botany Department, University of Zimbabwe, Salisbury; R. S. Cowan, Department of Botany, Smithsonian Institution, Washington, D.C.; Ellen Farr, Index Nominum Genericorum, Smithsonian Institution, Washington, D.C.; Robert Geesink, Rijksherbarium, Leiden, Netherlands; P. H. Hanelt, Zentralinstitut fuer Genetik und Kulturpflanzenforschung, Gatersleben, German Democratic Republic; Duane Isely, Botany Department, Iowa State University, Ames; J. A. Lackey, Botany Department, Smithsonian Institution, Washington, D.C.; Gwilym Lewis, Herbarium, Royal Botanic Gardens, Kew, Richmond, Surrey, England; Ivan Nielsen, Herbarium, Botanical Institute Risskov, Denmark; Magdalena Pena, Instituto de Biologia, Universidad Nacional Autonoma de Mexico, Mexico City; R. M. Polhill, Herbarium, Royal Botanic Gardens, Kew, Surrey, England; and P. H. Raven, Missouri Botanical Garden, St. Louis.

The data were processed by FAMULUS in cooperation with CALS/FAMULUS, Information Systems Division, National Agricultural Library. George Ratte, Communications and Data Service Division, Agricultural Research Service, using output from FAMULUS and the PRIME editor, rearranged fields and system sorts so that data in some of the other six lists were produced from the first list.

A NOMENCLATOR OF LEGUME (FABACEAE) GENERA

by Charles R. Gunn^{1/}

Nomenclature problems related to legume generic names are on a par with taxonomic and phylogenetic problems. Following the 1978 International Legume Conference at Kew, England, the taxonomic and phylogenetic frameworks were revised (Polhill and Raven, 1981).^{2/} These revisions are significant improvements over publications by Bentham and Hooker (1867), Taubert (1891-94 and including supplements by H. Harms), and Hutchinson (1964). The authors who contributed to the Polhill and Raven compendium accepted and classified 617 generic names (Corby, pers. commun., 1982) and referred to 276 synonyms.

This bulletin includes their recognized generic names as well as relating 2,096 synonyms to their accepted generic names. These synonyms were effectively but not necessarily validly published. At least 2,805 legume generic names have been published since 1753 up to 1982. I have used the recent literature, as well as advice from specialists, many of whom attended the 1978 Conference, in relating synonyms to accepted generic names. No new scientific names are published here.

^{1/}Botanist, Plant Exploration and Taxonomy Laboratory,
Beltsville Agricultural Research Center, Beltsville, Md. 20705.

^{2/}The year in parentheses after the authors' names refers to Literature Cited, p. 224.

PROCEDURES

This bulletin presents seven lists of legume generic and suprageneric names published from 1753 to 1982.

In the first list, annotations for accepted generic names consist of author(s), subtribe when designated, tribe, subfamily letter, notation if conserved generic name (Stafleu et al., 1978), note if needed, source, and subfamily letter combined with the phylogenetic number from Polhill and Raven (1981). Generic names in the faboid tribe Tephrosieae were not phylogenetically numbered, but they are arranged alphabetically. A phylogenetic number in parentheses means that Polhill and Raven accepted the generic concept but did not use the conserved or correct spelling of the generic name. The conserved or correct spelling is used in this bulletin. Additional data concerning accepted generic names may be found in Polhill and Raven (1981).

Annotations for synonyms in the first list consist of author(s), notation if conserved generic name, conversion to accepted generic name with author(s), subtribe when designated, tribe, subfamily letter, source of synonym, and a 'P&R' if listed as a synonym in Polhill and Raven. A query mark preceding a generic name indicates a doubtful conversion, and the letter X indicates the genus is a hybrid.

In the second list, annotations consist of subtribe and tribe, phylogenetic number, number of species in the genus, natural distribution (where endemic or native), and on a separate line and in parentheses the original publication citation, primarily from Farr et al. (1979) and secondarily from the Kewensis Index (1895-1974). The number of species and the natural distribution primarily are based on the publication by Polhill and Raven (1981), and a few numbers and distributions in the subfamily Mimosoideae are from Gunn (1983). Synonyms with authors are listed under each accepted genus name.

In the third, fourth, and fifth lists, legume generic names accepted by Polhill and Raven (1981) are given, respectively, by geographic region, by number of species in the genus, and by phylogenetic number. In the sixth list, legume generic names published between 1753 and 1982 are given by author's name. These names were checked using Stafleu and Cowan (1976, v. 1-4). The part of the author's name in parentheses is used to aid in identifying the author in Stafleu and Cowan, but traditionally it is not used in floras and monographs. In the seventh list, fossil legume generic names are given, and the eighth list includes suprageneric names accepted by Polhill and Raven (1981).

Simple codes are used for three entries--subfamily, source, and natural distribution. The subfamily code is C = Caesalpinoideae, F = Faboideae, and M = Mimosoideae. The source code and the natural distribution or geographical three-letter code are listed below.

Sources were used in this order: (1) Generic names accepted by Polhill and Raven (1981), though there are occasional spelling deviations and a few updates and (2) synonyms recorded in the following order: Farr et al. (1979), Airy Shaw (1966), and Hutchinson (1964). If a generic name was found in Farr et al., no other source was cited. Those not found in Farr et al. were recorded from Airy Shaw, and those not found in Airy Shaw were recorded from Hutchinson. All generic names from these three sources were recorded. Sources of generic names proposed since 1978 or omitted from these three sources were the original publications.

Source code:

AS = Airy Shaw (1966)
AUT = Author (generic names 1978-82)
CONSERVED GENUS NAME = (See ICBN.)
HUT = Hutchinson (1964)
ICBN = International Code of Botanical Nomenclature
(Stafleu et al., 1978)
ING = Index Nominum Genericorum (Farr et al., 1979)
KEW INDEX = Index Kewensis (1895-1974)
P&R = Polhill and Raven (1981)

Geographical 3-letter code:

AFR = Africa	MED = Mediterranean
ASI = Asia	MEX = Mexico
ATI = Atlantic Ocean islands	NAM = North America
AUS = Australia	NGU = New Guinea
CAM = Central America	NZL = New Zealand
CAS = Central Asia	OCE = Pacific Ocean islands
CEY = Sri Lanka	PHI = Philippine Islands
EAS = East Asia	RUS = Russia
EUP = Europe	SAM = South America
HIM = Himalayas	SEA = Southeastern Asia
IND = India	TAS = Tasmania
INE = Indonesia	WAS = Western Asia
INO = Indian Ocean islands	WIN = West Indies
MAD = Madagascar

Legume Generic Names Accepted by Polhill and Raven (1981)
by Geographic Region

An alphabetical list of the three-letter geographic code is defined under Procedures. Pantropic (PTR) and pansubtropic (PST) distributions from Polhill and Raven were converted to specific regions except for Asia (ASI). The overall designation ASI was assigned for PTR and PST, not specific regions such as CAS (Central Asia) and EAS (East Asia). Genera listed under the subdivisions of Asia also are listed under ASI.

NEW (OR NEO) WORLD CODE:

CAM = CENTRAL AMERICA
MEX = MEXICO
NAM = NORTH AMERICA

SAM = SOUTH AMERICA
WIN = WEST INDIES

OLD (OR PALEO) WORLD CODE:

AFR = AFRICA
ASI = ASIA
ATI = ATLANTIC OCEAN ISLANDS
AUS = AUSTRALIA
CAS = CENTRAL ASIA
CEY = SRI LANKA
EAS = EAST ASIA
EUP = EUROPE
HIM = HIMALAYAS
IND = INDIA
INE = INDONESIA

INO = INDIAN OCEAN ISLANDS
MAD = MADAGASCAR
MED = MEDITERRANEAN
NGU = NEW GUINEA
NZL = NEW ZEALAND
OCE = PACIFIC OCEAN ISLANDS
PHI = PHILIPPINE ISLANDS
RUS = RUSSIA
SEA = SOUTHEASTERN ASIA
TAS = TASMANIA
WAS = WESTERN ASIA

NEW WORLD:

CAM = CENTRAL AMERICA
