REPORT 39

A Special Note About This Report

Detailed statistics on farmer cooperatives are reported in this publication for both the 1972-73 and 1973-74 fiscal periods. The information provided updates and continues the statistical format begun in the 1950-51 period.

In addition, sample survey data covering 1974-75 have also been analyzed to provide significant national figures on farmer cooperatives during this time segment. This information and its contrast with that of initial 1950-51 coverage is presented to also illustrate changes over the latest quarter-century. This is succeeded by the more extensive material covering 1972-73 and 1973-74.

HIGHLIGHTS

The 1973-74 survey of marketing, farm supply, and related service cooperatives showed a continuing upward trend in total business volume but a decrease in number of memberships and organizations between July 1, 1973, and June 30, 1974 (1973-74 statistics appear in the main body of the report; comparative figures for 1972-73 are in the appendix).

Total gross business volume (including intercooperative business) handled by these cooperatives amounted to \$48.1 billion in 1973-74. This was an increase of 38.9 percent from the \$34.6 billion reported in the previous fiscal year.

Total net business, after adjusting the gross figure for business done between cooperatives, amounted to \$35.8 billion. This was an increase of 35.8 percent from the \$26.2 billion net in 1972-73.

The total number of farmer cooperatives decreased from 7,854 in 1972-73 to 7,755 in 1973-74, a net decrease of 99 associations. The decline largely reflects a continuing reorganization trend involving merger, consolidation, and acquisition.

Cooperative memberships totaled 6,105,530 in 1973-74, a decrease of 0.4 percent from 6,127,935 memberships reported for 1972-73. The drop continues the long-term trend of declining cooperative memberships due to the decreasing number of farmers in the United States.

The gross value of farm products marketed by cooperatives amounted to \$35.8 billion in 1973-74, an increase of 42.3 percent from the total gross volume of \$25.2 billion in 1972-73. The net value of these farm products, after eliminating duplication resulting from intercooperative business, amounted to \$27.1 billion. This represented an increase of 38.1 percent from the \$19.6 billion marketing net in the previous year.

The gross value of farm supplies handled by farmer cooperatives amounted to \$11.4 billion in 1973-74, compared with \$8.8 billion in the previous year—an increase of 28.9 percent. The net value of these supplies, after intercooperative business was eliminated, amounted to \$7.8 billion, 31.3 percent above the \$5.9 billion in 1972-73.

Receipts for services related to marketing farm products and handling farm supplies amounted to \$868 million, an increase of 41.6 percent more than the 1972-73 receipts of \$613 million.

In net value of combined marketing, farm supply, and related service volume, California continued in first place with \$3.0 billion—8.4 percent of total net business; Iowa was in second place with \$2.8 billion—7.9 percent of the total; and Minnesota ranked third with \$2.6 billion—7.3 percent of the total.

A QUARTER-CENTURY CONTRAST— FARMER COOPERATIVES IN 1950-51 AND 1974-75

While annual statistics on farmer cooperatives have been presented since 1929-30, extensive changes in the series were made beginning with the 1950-51 presentation. These changes were initiated to provide more accurate data on the individual categories of farm products marketed and farm supplies purchased and on the services performed in handling these commodities.

The quarter-century collection of statistics since 1950-51 provides a record of many impressive changes occurring in the cooperative sector during the period. Positive and negative components of its overall growth trend can be examined from the standpoint of changes in amounts of business volume handled, numbers of organizations operated, and membership totals served.

Business Volume Increases

Net cooperative business, unadjusted for changes in the price level, increased from \$8.1 billion in 1950-51 to \$42.3 billion in 1974-75 (table A).

During this 25-year period, between 75 and 80 percent of each of the annual total net business volumes of cooperatives was accounted for by farm products marketed, about 20 percent by production supplies purchased, and between 1 and 2.5 percent by related services furnished.

A breakdown of the period's beginning and end totals shows that the value of products marketed through cooperatives increased from \$6.4 billion to \$32.7 billion, supplies purchased from \$1.7 billion to \$8.7 billion, and services provided from \$100 million to \$954 million.

Grains, soybeans, and soybean meal and oil; dairy products; fruits and vegetables; and livestock and livestock products accounted for 84 percent of all products marketed in 1950-51, compared with 81 percent in 1974-75.

For the 25-year period, a substantial increase in the proportion of total cooperative business accounted for by grain, soybeans, and soybean meal and oil was accompanied by a major decrease in the proportion that livestock and livestock products comprised. Fruits and vegetables and dairy products showed a more moderate increase and decrease, respectively. Among lesser commodities, sugar products and rice showed substantial relative increases, while cotton and wool and mohair showed relatively great declines.

In the farm supply group, three items—feed, petroleum products, and fertilizer—were especially important. They accounted for 73 percent of the total production supply business in 1950-51, and 71 percent in 1974-75.

Considering changes in the group, however, the proportion of dollar business volume accounted for by feed declined, while the proportion accounted for by fertilizer increased. Petroleum product volume share has fluctuated within a relatively narrow range. In the comparatively minor supply items, farm chemicals increased the proportion of net volume they comprised, while seeds and farm machinery and equipment declined during the period.

Volume Shifts Geographically

The upper Middle West section of the country—the East and West North Central Regions—in 1973-74 encompassed cooperatives handling about half the net volume of

Table A—Net volume of business reported for individual products marketed, supplies purchased, and services provided, 1950-51 and 1974-75

¹ Included in miscellaneous products marketed.

² Included in miscellaneous supplies purchased.

cooperative business.¹ Next in order of importance were the Pacific, Middle Atlantic, and South Atlantic Regions. New England and the Mountain Regions had the least net volume of cooperative business.

During 1950-51 through 1973-74, the relative proportion of marketing business declined substantially in the North Central Region and to a lesser degree in the New England, Middle Atlantic, and Mountain Regions. Marketing business increased in the Pacific, West South Central, and South Atlantic Regions.

Supplies purchased declined in the Middle Atlantic, East North Central, New England, and Pacific Regions. Increases occurred in the West North Central, South Atlantic, and East South Central Regions.

¹Cooperative statistics presented for the 1974-75 period were limited to U.S. totals. Detailed geographic breakdowns made for the prior period (1973-74) allowed area comparisons to be made.

Market Share Greater

Cooperatives handled about 20 percent of the agricultural products marketed in the United States in 1950-51; this had increased to 27 percent in 1974-75. The individual commodity proportions accounted for by dairy products, fruits and vegetables, grain and soybeans, and cotton and cotton products were higher than the overall average.

Proportions of farm supplies handled through cooperatives were 12 and 17 percent in the earlier and later periods, respectively. The increase was attributable in large measure to significantly larger volumes of fertilizer, pesticides, and petroleum products moving through cooperatives.

Number of Organizations Declines

In similar fashion to the farming operations they serve, the number of farmer cooperatives considerably diminished during 1950-51 to 1974-75.

The total number of marketing, farm supply, and related service cooperatives declined from 10,064 in 1950-51 to 7,645 in 1974-75 (table 1). The number of marketing cooperatives declined from 6,519 to 4,770 and farm supply cooperatives from 3,283 to 2,729. In this same period, the number of service cooperatives declined from 262 to 146.

About three-fourths of the decline in the number of cooperatives during the overall period was composed of marketing organizations, and about one-half of these were dairy cooperatives. Significant declines also occurred in the number of associations handling fruits and vegetables and poultry products. The number of associations handling cotton and cotton products, dry edible beans and peas, sugar products, or tobacco changed very little.

Cooperatives Predominantly Small

A substantial majority of cooperatives are relatively small business enterprises. For example, almost 40 percent of all cooperatives had annual business volumes of less than \$500,000 in 1971-72, the latest period for which such data were accumulated.² Another 22 percent reported an annual volume of business ranging from \$500,000 to \$999,999, and 31 percent reported an annual volume of business of \$1 million to \$4.9 million. Thus, only 7 percent of all cooperatives had an annual volume of \$5 million of business or more and nearly half of these were in the \$5 million to \$10 million size range.

In 1971-72, business volume of the 100 largest cooperatives accounted for about 50 percent of the gross volume and net margins of all cooperatives.

Membership Features

The number of cooperative members and the number of their memberships in such organizations is often a confusing item in statistical presentations. It is estimated that at least five farmers out of six are members of one or more cooperatives. Also, a limited number of rural nonfarm people join farm supply cooperatives to obtain fuel oil, fertilizer, seeds, and appliances. Indications are that, on the average, a cooperative member belongs to between two and three associations. Therefore, the combined number of memberships far exceeds the number of members.

Total memberships increased from slightly more than 7 million in 1950-51, to a high of 7.7 million in 1955-56, followed by a quite consistent decline to 6.1 million in

²Comparative data were not available for 1950-51.

1974-75 (table 3). This trend reflects the decline in the number of farms, although the drop in number of cooperatives has been less pronounced.

During the 25-year period, a major change in the mix of memberships took place. Marketing association memberships were 1.4 times greater than supply association memberships in 1950-51. They rose to a high point in the mid-1950's, then declined 25 percent to a total that has been in substantial balance with that of the farm supply associations from the late 1960's through the early 1970's.

Farm supply association memberships increased through the decade of the 1950's, and decreased during the 1960's. While supply memberships are down 19 percent from their 1961 peak, the present total is still 4 percent greater than at the beginning of the period.

Memberships in the related service cooperatives have declined most severely, dropping more than 75 percent in the 25 years.

STATISTICS OF FARMER COOPERATIVES, 1972-73, 1973-74, AND 1974-75

By Bruce L. Swanson and Jane H. Click
History and Statistics

This report provides information on the number, membership, and business volume of farmer cooperatives classified by geographic location and by commodity and functional type. Both gross (includes intercooperative business) and net (excludes intercooperative business) dollar volumes of cooperatives are shown.

The appendix includes tables 1 through 6, providing statistics for 1972-73.³ Appendix table 7 covers statistics for certain agriculturally related cooperatives not included in the annual survey. Classification of cooperatives is also discussed in the appendix.

COOPERATIVES AND MEMBERSHIPS

The survey for 1973-74 included a total of 7,755 marketing, farm supply, and related service⁴ cooperatives, compared with 7,854 in 1972-73. Memberships in these cooperatives totaled 6,127,935 compared with 6,105,530 in the previous survey.

Number of Cooperatives

The 7,755 marketing, farm supply, and related service cooperatives in the 1973-74 survey represented a decrease of 99 associations, or 1.3 percent, from the previous year. Much of the decrease was due to a continuing reorganization trend involving merger, consolidation, and acquisition.

Table 1 and figure 1 show that 4,822 of the 7,755 cooperatives primarily marketed farm products, 2,778 handled farm production supplies, and 155 were related service cooperatives.

Comparison of 1973-74 with 1972-73 shows that marketing cooperatives decreased from 62.4 to 62.2 percent of the total number of cooperatives; farm supply cooperatives increased from 35.7 to 35.8 percent of the total; and related service cooperatives increased from 1.9 to 2 percent of the total.

The percent changes in table 1 are due to some extent to the reclassification of cooperatives because of changes in the function from which they derive the major portion of their dollar volume. The primary examples are marketing cooperatives whose major business became the sale of farm supplies, or farm supply cooperatives in which marketing took a dominant role.

In table 2, cooperatives are classified according to the business activity that consistently accounted for the largest percentage of their dollar business volume. (See the appendix for a further discussion of the classification system.)

Minnesota, with 1,073 cooperatives, continued to lead in the total number of cooperatives. North Dakota was second with 671, and Wisconsin third with 511.

³For information on cooperative numbers, memberships, and business volumes prior to 1950-51, see (in libraries; out of print) Statistics of Farmer Cooperatives, 1962-63, Farmer Cooperative Serv. Gen. Rpt. 128, appendix tables 5, 6, and 7.

⁴Related services include trucking, storage, grinding, drying, and similar services affecting the form, quality, or location of farm products and supplies handled by cooperatives. They do not include credit, electric, or telephone services; dairy herd improvement; artificial breeding; or other types of services not directly related to marketing or purchasing activities.

¹For years prior to 1950-51, see appendix table 5, FCS General Report 128 in libraries.

²Preliminary.

Number of Memberships

Memberships in marketing, farm supply, and related service cooperatives totaled 6,105,530 in 1973-74, a decrease of 0.4 percent from the 6,127,935 memberships reported for the previous year (table 3). The long-term trend has been one of decline, reflecting the decreasing number of farmers in the United States. Many farmers were members of more than one cooperative and were counted two or more times in the annual survey; therefore, the total membership figure of 6,105,530 contains duplication that cannot be eliminated with current reporting methods.

Membership figures often vary widely from year to year for cooperatives participating in price stabilization programs—particularly for cooperatives handling cotton, peanuts, and tobacco.

Classification of members is also affected by the diversity of services offered by cooperatives. For example, a member may use a cooperative to market only one of the farm products handled by the cooperative, or a member may use a cooperative classified in the marketing group only for purchasing one or more types of production supplies. The member's business with the cooperative may not, therefore, be in the group that represents the cooperative's major business volume (which determines how the cooperative is classified in this report). His membership, however, will be included arbitrarily in that classification.

Minnesota continued to lead in total number of memberships with 589,185 (table 2). Wisconsin was second with 420,955 and Indiana was third with 409,890.

Table 4 shows the memberships in local and regional cooperatives classified by major business activity. Of the 7,755 cooperatives included in the 1973-74 survey,

See next page for footnote references.

1/ Preliminary data covering operations of cooperatives whose fiscal years ended during the period July 1, 1973, to June 30, 1974, with limited exceptions.

2/ Cooperatives performing specific services on a commodity are included. Incorporated local associations of a federation that performs the actual marketing or processing are counted.

3/ Includes soybean marketing and processing.

4/ Includes members (those entitled to vote for directors) but does not include nonvoting patrons. (There is some duplication in these membership figures because many farmers belong to more than one cooperative.)

5/ Includes independent local cooperatives, federations, and centralized cooperatives.

6/ The cooperative with which this membership is affiliated has been counted in the State in which the cooperative maintains its headquarters. (Foreign members of U.S.-headquartered livestock cooperative are located in Canada.)

7/ Includes cooperatives temporarily inactive because of crop failures or other reasons or cooperatives in which all memberships are allocated to other States.

8/ No individual memberships.

9/ Membership of nut cooperatives that market peanuts fluctuates from year to year and is affected by the extent to which producers participate in price stabilization programs.

10/ Includes sugar, sugarcane, sugarbeets, honey, maple syrup, molasses, and sorghum.

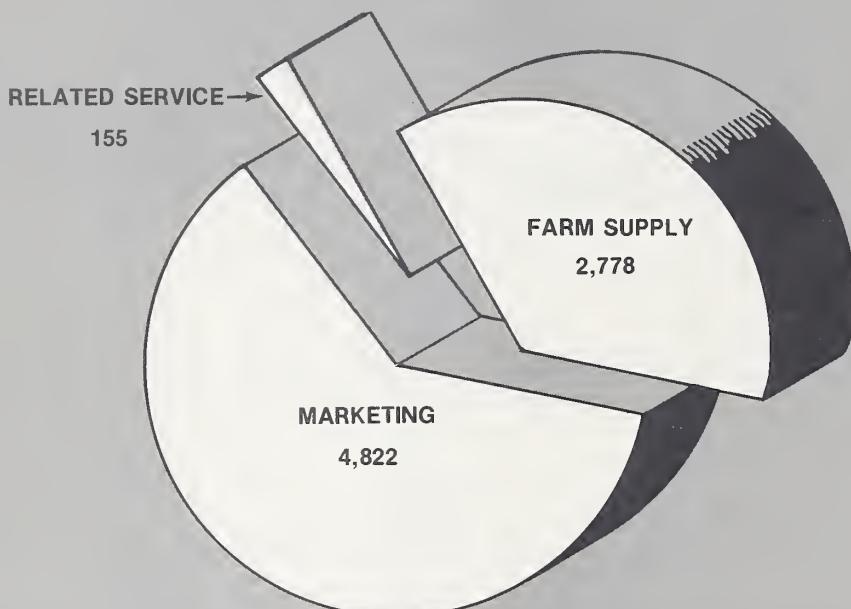

11/ Less than 5 members.

12/ Includes forest products, fur pelts, hay, hops, nursery stock, tung oil, coffee, and other farm products not separately classified.

13/ Member-patrons. Number fluctuates considerably from year to year due to participation in price stabilization programs.

14/ Includes a statewide federation of county wool pools. Payment is made by the federation to the pool manager who is responsible for payment to the individual wool growers.

15/ Cooperatives providing services related to marketing or purchasing activities.

7,178—or 93 percent—were local cooperatives. These local cooperatives had 4,246,840 memberships, or 70 percent of the total. Regional cooperatives represented 7 percent of the total and accounted for 30 percent of the memberships.

BUSINESS VOLUME

In 1973-74, the total gross business volume of 7,755 marketing, farm supply, and related service cooperatives amounted to \$48.1 billion (table 5). This was an increase of 38.9 percent from the \$34.6 billion gross reported in 1972-73.

The total net business volume of farmer cooperatives amounted to \$35.8 billion in 1973-74. Included in this amount were \$27.1 billion for farm products marketed, \$7.8 billion for farm supplies purchased, and \$0.9 billion for services performed (fig. 2). The total net figure of \$35.8 billion, which excludes intercooperative business (the difference between gross and net business volumes), represented an increase of 36.7 percent from the \$26.2 billion net of the previous year. Intercooperative business amounted to \$9.6 billion in 1973-74.

¹For years prior to 1950-51, see appendix table 6, FCS General Report 128 in libraries.²Preliminary.

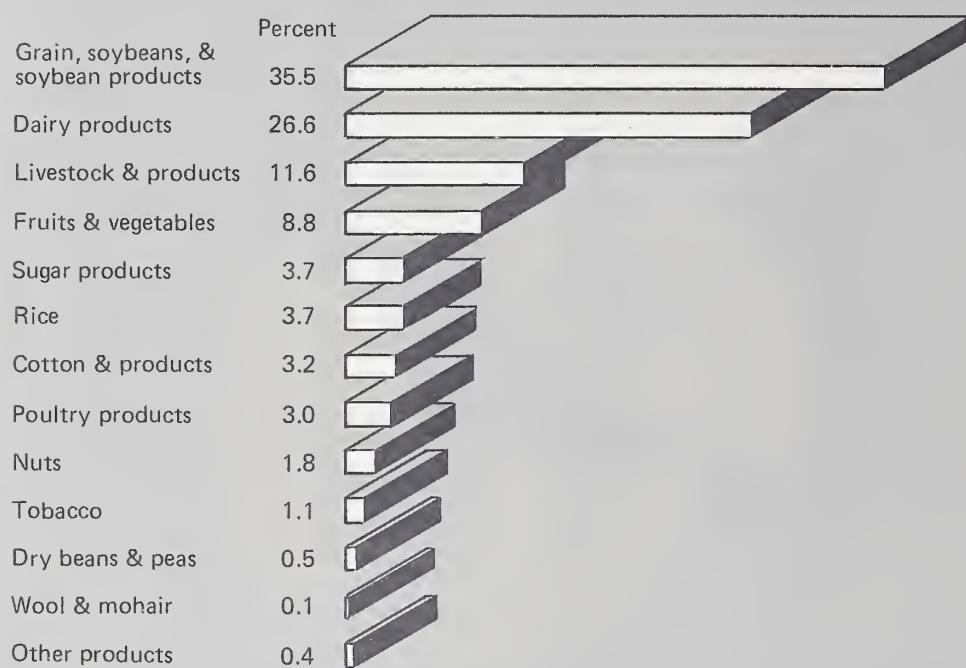

Gross and net volumes of business for marketing, purchasing, and related service activities are shown in table 5 for each survey year, beginning with 1950-51. The 1973-74 totals exceeded totals reported in any previous survey.

Gross volume of farm products marketed by cooperatives increased from \$25.2 billion in 1972-73 to \$35.8 billion in 1973-74, an increase of 42.3 percent. The net volume of farm products marketed amounted to \$27.1 billion in 1973-74 and accounted for 75.9 percent of the total net volume of cooperatives. The net marketing volume for 1973-74 represented an increase of 38.1 percent from the \$19.7 billion net for the previous year. This gain resulted primarily from increases in the dollar volumes reported for grain, soybeans, and soybean meal and oil, and dairy products.

Figure 3 illustrates the leading products marketed by cooperatives based on net marketing business volume. Grain, soybeans and soybean meal and oil led with 35.5 percent of total net marketing volume, followed by dairy products and livestock.

In 1973-74, the gross volume of all farm supplies handled by cooperatives amounted to \$11.4 billion, a 28.9 percent increase from the \$8.8 billion gross in 1972-73. The net farm supply volume of \$7.8 billion accounted for 21.7 percent of the total net business volume in 1973-74—a 31.3 percent increase from the \$5.9 billion supply net in

FIG. 3 RELATIVE IMPORTANCE OF MAJOR FARM PRODUCTS
MARKETED BY COOPERATIVES 1973-74

Based on net marketing business of \$27.1 billion

1972-73. Increases in net volume of feed, fertilizer, and petroleum products handled largely accounted for this rise.

As shown in figure 4, leading farm supplies handled by cooperatives in terms of net business volume were feed, with 31.7 percent of the total, followed by fertilizer and petroleum products.

Receipts for services performed by all types of cooperatives amounted to \$868 million in 1973-74, a 41.6 percent increase from the 1972-73 service receipts of \$613 million. Service receipts represented 2.4 percent of total net business volume in 1973-74.

An estimated 62.1 percent of the 7,755 cooperatives in the survey, or 4,817 cooperatives, marketed farm products in 1973-74 (table 6). These included 4,075 cooperatives that primarily marketed farm products; 727 cooperatives that primarily handled farm supplies; and 15 related service cooperatives whose major services were trucking, storage, or other activities related to marketing farm products or purchasing farm supplies. Marketing cooperatives, numbering 350, that were either newly organized or temporarily inactive were not included.

In 1973-74, farm supplies were handled by 5,554 cooperatives, 71.6 percent of the total number of cooperatives in the survey. Included were 2,722 cooperatives that primar-

¹ Preliminary.

² Membership figures vary considerably from year to year due to cooperative participation in price stabilization programs, particularly in cotton, peanuts, and tobacco. They are also affected by the number of reported members who may not be active patrons in a specific year.

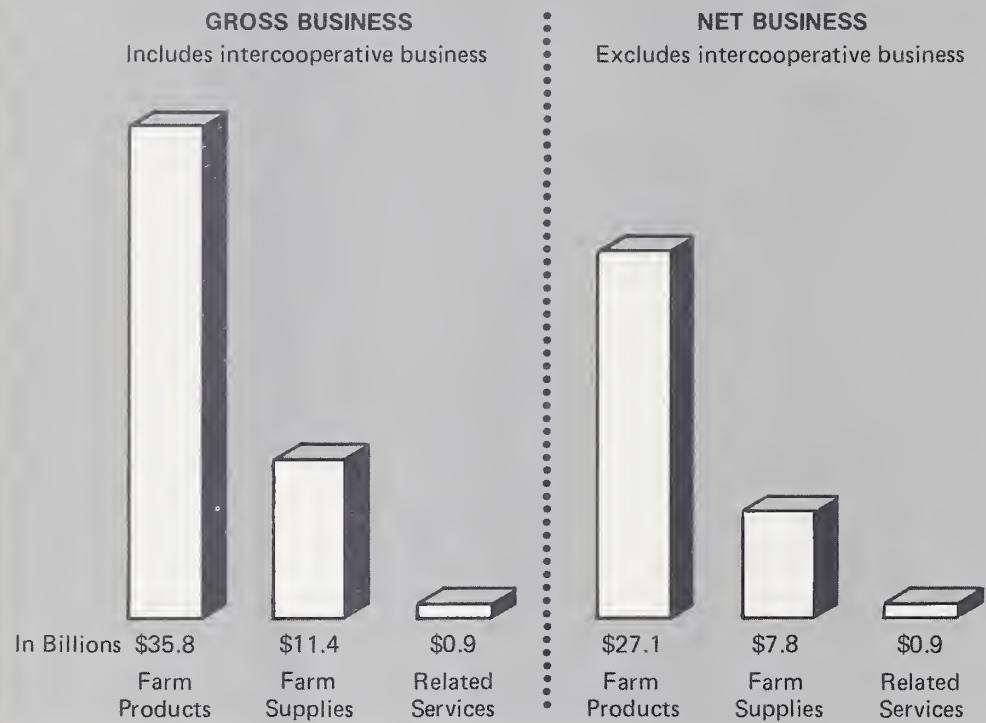

³ Includes bargaining cooperatives.

⁴ Includes soybean marketing and processing.

ily handled farm supplies and 2,788 marketing and 44 related service cooperatives that handled farm supplies as a sideline activity. Five farm supply cooperatives that were either newly organized or temporarily inactive were not included.

In 1973-74, 4,586 cooperatives of all types, or 59.1 percent of the total, performed one or more services related to farm product marketing or farm supply purchasing. These included 142 cooperatives primarily performing service activities such as trucking, storage, drying, and similar services; 1,362 farm supply cooperatives; and 3,082 marketing cooperatives (including cotton ginning, livestock trucking, and rice- and fruit-drying cooperatives). Ten related service cooperatives that were either newly organized or temporarily inactive were not included.

The survey showed that 57.8 percent of all marketing cooperatives handled one or more types of farm supplies in 1973-74, and 63.9 percent provided specialized related services such as cotton ginning and livestock trucking or general related services such as storage, grinding, and drying. Of the farm supply cooperatives, 26.2 percent marketed farm products, and 49 percent performed related services for their patrons. An estimated 9.7 percent of the related service cooperatives marketed farm products, and 28.4 percent handled farm supplies in 1973-74.

Local and Regional Cooperatives

Table 7 shows the estimated volumes of specified commodities marketed by regional and local cooperatives. Local cooperatives accounted for \$12 billion of the net volume of farm products marketed in 1973-74, or 44.4 percent of the total. Regional cooperatives accounted for \$15.1 billion of the net marketing volume, or 55.6 percent of the total.

Local cooperatives accounted for a major portion of the total net marketing volume for the following commodities: Grain, soybeans and soybean products, 83.2 percent; and miscellaneous farm products, 79.2 percent.

Of the total gross marketing volume, \$8.7 billion, or 24.2 percent, represents the volume of marketing business between cooperatives.

The estimated gross and net volumes of farm supplies handled by local and regional cooperatives are shown in table 8. Local cooperatives accounted for \$5.3 billion, or 68.6 percent, of the total net supply volume. Regional cooperatives accounted for \$2.4 billion, or 31.4 percent, of the total.

The difference between the total net and gross volumes indicates that inter-cooperative farm supply business amounted to \$3.6 billion, or 31.9 percent of total gross supply volume.

Table 5—Estimated gross and net volume of business of marketing, farm supply, and related service cooperatives, and percent of total, 1950-51 to 1974-75

¹ Preliminary.

² Number of cooperatives handling each commodity group is computed as a percentage of the total number of 7,755 cooperatives listed.

³ Includes coffee, forest products, fur pelts, hay, hops, seed marketed for growers, nursery stock, tung oil, and other farm products not separately classified.

⁴ Because many cooperatives do more than one type of business, these totals are less than the number that would be obtained by adding the number of cooperatives handling individual items or performing individual services.

⁵ Includes plant equipment, automotive supplies, hardware, chicks, and other supplies not separately classified.

⁶ Charges for services related to marketing or purchasing but not included in the volume reported for these activities.

¹ Preliminary.

Based on net farm supply business of \$7.8 billion

Local cooperatives accounted for 81.3 percent of total service receipts, or \$705 million, and regional cooperatives for 18.7 percent, or \$162 million.

Geographic Areas

The estimated volume of farm products marketed and farm supplies purchased by cooperatives in 1973-74 is shown by States and geographic regions in table 9. The East North Central and West North Central Regions combined accounted for 51.2 percent of the total net volume of farm products marketed, and for 48.7 percent of supplies purchased.

The West North Central Region, with related service receipts of \$399 million, ranked first among all regions. This represented 46 percent of the total volume of service receipts reported by cooperatives.

In net value of combined marketing, farm supply, and related service volume, California continued in first place with \$3 billion, or 8.4 percent of the total; Iowa was in second place with \$2.8 billion, or 7.9 percent of the total; and Minnesota ranked third with more than \$2.6 billion, or 7.3 percent of the total.

Table 9--Estimated gross and net sales $\frac{1}{4}$ of marketing, farm supply, and related service cooperatives, $\frac{2}{4}$ by commodities, geographic regions, and States, 1973-74 $\frac{3}{4}$

See next page for footnote references.

1/ The volume of products marketed is allocated to the State in which they originate and the volume of farm supplies is allocated to the State in which they are sold.

2/ Includes independent local cooperatives, federations, and centralized cooperatives.

3/ Preliminary data covering operations of cooperatives whose fiscal years ended during the period July 1, 1973, through June 30, 1974, with limited exceptions.

4/ The total number of cooperatives handling each commodity within a State may include only cooperatives headquartered in the State, only cooperatives headquartered in other States, or a combination of both. Number of cooperatives handling a commodity includes those performing specific services on the commodity, such as cotton ginning cooperatives, livestock trucking cooperatives, and rice- and fruit-drying cooperatives. (Income for these specific services is included with service receipts.)

5/ Includes the value of commodities marketed by cooperatives under price support programs in 1973-74. Cooperative business volume is influenced by the extent to which patrons participate in these programs.

6/ Included in the combined total dollar volume of all farm products marketed, farm supplies handled, and related services provided, in order not to reveal separate volume data for an individual association.

7/ Includes value of marketing commodities imported or farm supplies exported.

8/ Dollar volume for commodity allocated to States of origin.

9/ Includes the volume of a statewide federation of county wool pools that is responsible for selling all wool in the pools. Payment is made by the federation to the pool manager who is responsible for payments to the individual wool growers.

10/ The volume of a Hawaiian sugar cooperative headquartered in California is included in the dollar volume of California.

11/ Includes forest products, fur pelts, hay, hops, nursery stock, tung oil, coffee, and other farm products not separately classified.

12/ Less than \$500.

13/ Includes plant equipment, automotive supplies, hardware, chicks, and other supplies not separately classified.

14/ These combined gross and net totals will not, in all cases, equal the sum of individual commodity totals or the sum of the totals for marketing, farm supplies, and related services, because some individual and group totals have been adjusted in order not to reveal volume data for individual associations.

15/ Receipts for services related to marketing and purchasing activities, but not included in the volumes reported for these activities.

16/ Because many cooperatives do more than one type of business, these totals are less than the number that would be obtained by adding the number of cooperatives marketing individual products, handling individual supplies, or providing individual services.

APPENDIX

The following discussion of the methods used in classifying cooperatives for the annual survey should create a better understanding of the types of cooperatives covered in these statistics.

Classification of Cooperatives

Marketing, farm supply, and related service cooperatives are the basis of the 1973-74 survey of farmer cooperatives discussed in this report. Appendix table 7 shows additional information by geographic regions and States on the number, participation, and activity level of other types of service cooperatives—rural electric associations, production credit associations, rural credit unions, and other types of credit cooperatives as well as dairy herd improvement associations. Previously, data for these service cooperatives were reported only on a national basis. (A brief discussion of these other types of service cooperatives appears later in the appendix.)

Marketing cooperatives in this report included associations whose primary business was marketing farm products for their patrons—that is, more than 50 percent of their total dollar volume was derived from the sale of farm products.

Marketing cooperatives were further classified according to which major commodity of 13 classifications was predominant (in terms of dollar volume) in each association's business. Farm supply cooperatives were those whose farm supply business accounted for more than 50 percent of their total dollar volume. The major functions of related service cooperatives were trucking, storing, drying, or similar services related to marketing or farm supply activities.

Many cooperatives handle more than one commodity and provide both marketing and farm supply facilities, as well as facilities and equipment for performing related services such as storing, drying, and trucking. Such associations were classified according to the predominant commodity or function as indicated by their business volumes.

Marketing, farm supply, and related service cooperatives were also classified according to organizational structures:

Local Association

A local association provides cooperative services in a local area or community, a county, or even several counties. Individual farmers are the members of these local cooperatives. Local associations usually perform a limited number of the first steps involved in marketing. In the case of farm supply associations, practically all sales are at the retail level. Local associations may or may not be affiliated with other cooperatives.

Regional Association

A regional cooperative serves a district consisting of a number of counties, or, in some cases, a number of States. Types of associations classified as regional for purposes of this report are as follows:

1. All federated cooperatives. These are cooperative organizations whose membership is composed of two or more local associations organized to market farm products or purchase production supplies for their patrons. Individual farmers are not members of

strictly federated associations, but are members of the local associations that comprise the federation. Regional federations may be members of other federated associations.

2. Centralized associations usually serving a multicounty area. A regional centralized association is structurally like a small-scale local association in that individual farmers make up the membership. In a strictly centralized regional cooperative, there are no autonomous local associations.

3. Cooperatives with large volumes that are neither strictly federated nor strictly centralized, as their members include both local cooperatives and individual farmers.

4. Some associations with small business volumes that market farm products for, or sell production supplies to, both local associations and individual producers, or do business in more than one State.

5. Bargaining associations. These associations derive all or a major portion of their business volume from negotiating with distributors, processors, and other buyers and sellers over price, quantities, grade, terms of sale, and other factors involved in marketing farm products or purchasing farm supplies. While the primary function of such an association is to bring buyers and sellers together to contract for the sale of members' products or to purchase members' supplies, many bargaining associations now perform additional functions. For example, dairy bargaining associations at one time generally performed only price negotiation. Now, however, many of these associations perform additional functions, such as physically handling a portion of the milk and making spot sales for their patrons. Bargaining associations, like other dairy marketing cooperatives, represent their members at Federal or State milk order hearings.

Readers who wish to make comparisons from year to year in specific commodity groups should keep in mind the differences in classification between State and national data. For example, State agencies frequently publish directories that include credit, electric, and other types of service cooperatives not directly related to marketing farm products or purchasing production supplies.

Cooperatives may operate in a specific State for a considerable period of time before they are included in the national survey. This may be due to one of the following reasons: (1) Farmer Cooperative Service may not learn of the existence of the cooperative immediately, or (2) the cooperative may not have completed and returned the initial questionnaire sent to it by Farmer Cooperative Service.

For inclusion in the annual survey, a cooperative is defined as one that meets the following requirements:

(1) Farmers or agricultural producers hold the controlling interest in the cooperative; (2) no member of the cooperative is allowed more than one vote because of the amount of stock or membership capital he owns therein, or the cooperative does not pay dividends on stock or membership capital in excess of 8 percent a year; and (3) the cooperative does not deal in products of nonmembers in an amount greater in value than that it handles for its members.

For many years, the national survey has been classifying cooperatives according to the predominant commodity in each cooperative's business volume. If a cooperative consistently indicates that it is handling a larger volume of a commodity than the one it was originally organized to handle and which provided the basis for its initial classification in the national survey, this cooperative is reclassified into the commodity group currently representing the predominant product in its business volume. This practice differs from that followed in many State surveys in which cooperatives are classified according to the commodity groups they were originally organized to handle.

The 1950-51 survey was the first annual survey in which cooperatives furnished

data by individual commodities handled and services performed.⁵ Regional cooperatives were asked to furnish information on memberships and business volumes for the individual States they served in 1950-51. For the first time, it was possible to discontinue the former practice of crediting all memberships and business to the State in which each regional association maintained its headquarters. This was the beginning of more realistic figures for States in geographic areas where regional cooperatives were of major importance in cooperative activities.

⁵A detailed discussion of the revisions initiated in statistical methods in 1950-51 was given in Statistics of Farmers' Marketing, Purchasing, and Service Cooperatives, 1950-51, U.S. Dept. Agr., Farm Credit Admin., Misc. Rpt. 169, pp. 1-3.

See next page for footnote references.

1/ Preliminary data covering operations of cooperatives whose fiscal years ended during the period July 1, 1972, to June 30, 1973, with limited exceptions.

2/ Cooperatives performing specific services on a commodity are included. Incorporated local associations of a federation that performs the actual marketing or processing are counted.

3/ Includes soybean marketing and processing.

4/ Includes members (those entitled to vote for directors) but does not include nonvoting patrons. (There is some duplication in these membership figures because many farmers belong to more than one cooperative.)

5/ Includes independent local cooperatives, federations, and centralized cooperatives.

6/ The cooperative with which this membership is affiliated has been counted in the State in which the cooperative maintains its headquarters. (Foreign members of U.S.-headquartered livestock cooperative are located in Canada.)

7/ Includes cooperatives temporarily inactive because of crop failures or other reasons or cooperatives in which all memberships are allocated to other States.

8/ No individual memberships.

9/ Membership of nut cooperatives that market peanuts fluctuates from year to year and is affected by the extent to which producers participate in price stabilization programs.

10/ Includes sugar, sugarcane, sugarbeets, honey, maple syrup, molasses, and sorghum.

11/ Less than five members.

12/ Includes forest products, fur pelts, hay, hops, nursery stock, tung oil, coffee, and other farm products not separately classified.

13/ Member-patrons. Number fluctuates considerably from year to year due to participation in price stabilization programs.

14/ Includes a statewide federation of county wool pools. Payment is made by the federation to the pool manager who is responsible for payment to the individual wool growers.

15/ Cooperatives providing services related to marketing or purchasing activities.

Appendix table 2—Number and estimated memberships of local and regional marketing, farm supply, and related service cooperatives, by major business activity, and percent of total in each activity group, 1972-73¹

Total business	⁴ 7,854	100.0	34,634,467	100.0	26,170,778	100.0

¹ Preliminary.

² Number of cooperatives handling each commodity group is computed as a percentage of the total number of 7,854 cooperatives listed.

³ Includes coffee, forest products, fur pelts, hay, hops, seed marketed for growers, nursery stock, tung oil, and other farm products not separately classified.

⁴ Because many cooperatives do more than one type of business, these totals are less than the number that would be obtained by adding the number of cooperatives handling individual items or performing individual services.

⁵ Includes plant equipment, automotive supplies, hardware, chicks, and other supplies not separately classified.

⁶ Charges for services related to marketing or purchasing but not included in the volume reported for these activities.

Appendix table 4—Estimated marketing business of local and regional cooperatives, by specified commodities, 1972-73¹

Farm products marketed for patrons	Local	Regional		Total local and regional

See next page for footnote references.

1/ The volume of products marketed is allocated to the State in which they originate and the volume of farm supplies is allocated to the State in which they are sold.

2/ Includes independent local cooperatives, federations, and centralized cooperatives.

3/ Preliminary data covering operations of cooperatives whose fiscal years ended during the period July 1, 1972, through June 30, 1973, with limited exceptions.

4/ The total number of cooperatives handling each commodity within a State may include only cooperatives headquartered in the State, only cooperatives headquartered in other States, or a combination of both. Number of cooperatives handling a commodity includes those performing specific services on the commodity, such as cotton ginning cooperatives, livestock trucking cooperatives, and rice- and fruit-drying cooperatives. (Income for these specific services is included with service receipts.)

5/ Includes the value of commodities marketed by cooperatives under price support programs in 1972-73. Cooperative business volume is influenced by the extent to which patrons participate in these programs.

6/ Included in the combined total dollar volume of all farm products marketed, farm supplies handled, and related services provided, in order not to reveal separate volume data for an individual association.

7/ Includes value of marketing commodities imported or farm supplies exported.

8/ Less than \$500.

9/ Dollar volume for commodity allocated to States of origin.

10/ Includes the volume of a statewide federation of county wool pools that is responsible for selling all wool in the pools. Payment is made by the federation to the pool manager who is responsible for payments to the individual wool growers.

11/ The volume of a Hawaiian sugar cooperative headquartered in California is included in the dollar volume of California.

12/ Includes forest products, fur pelts, hay, hops, nursery stock, tung oil, coffee, and other farm products not separately classified.

13/ Includes plant equipment, automotive supplies, hardware, chicks, and other supplies not separately classified.

14/ These combined gross and net totals will not, in all cases, equal the sum of individual commodity totals or the sum of the totals for marketing, farm supplies, and related services, because some individual and group totals have been adjusted in order not to reveal volume data for individual associations.

15/ Receipts for services related to marketing and purchasing activities, but not included in the volumes reported for these activities.

16/ Because many cooperatives do more than one type of business, these totals are less than the number that would be obtained by adding the number of cooperatives marketing individual products, handling individual supplies, or providing individual services.

Other Service Cooperatives

As mentioned earlier, other types of service cooperatives were included in the 1973-74 survey besides those directly related to marketing and farm supply purchasing. These other types of service cooperatives are discussed below:

Federal Land Bank Cooperatives

For the fiscal year ended June 30, 1974, there were 553 Federal Land Bank associations throughout the United States and associated Commonwealth of Puerto Rico with a membership of more than 431,000. These associations made loans of \$3.6 billion to their farmer members during the year.

Texas led all other States, with 11.9 percent of the total number of associations and 8.1 percent of total members. California ranked first with 7.9 percent of total loans made, and Texas second, with 6.5 percent.

The West North Central Region accounted for 21.7 percent of total associations and 27.3 percent of total members. The South Atlantic Region accounted for 19.7 percent of total loans.

Production Credit Associations

During the year ended June 30, 1974, 433 production credit associations made loans of \$14 billion to their 521,435 stockholders.

Texas was a leader again with 7.6 percent of total associations and 9.9 percent of loans made. North Carolina led in number of stockholders with slightly more than 9 percent of the total.

The South Atlantic Region accounted for more than 22 percent of association stockholders.

The 20 percent of the associations that were situated in the West North Central Region made 26.5 percent of total loans.

Banks for Cooperatives

Thirteen banks for cooperatives made loans of \$6.8 billion to their 3,059 agriculturally oriented member cooperatives during the fiscal year ended June 30, 1974.

Almost 35 percent of total members were situated in the West North Central Region, which also accounted for 33 percent of all loans made. Located in the region was Minnesota—the leader with 268 members and more than \$673 million in loans made.

Rural Credit Unions

At the close of 1974, rural credit unions in the United States and associated Commonwealth of Puerto Rico numbered 351, with 478,270 members holding share savings of almost \$515 million.

Among the States, 8 percent (28 in number) of the total associations were in Michigan, which also had more than 84,000 members. Massachusetts was highest in total members and total share savings with 11 percent and 14 percent, respectively.

Rural Electric Cooperatives

As of December 31, 1974, 980 rural electric cooperatives reported 7.8 million consumer members, and revenue during the year amounted to \$2.2 billion.

With 8.2 percent of total associations, 8 percent of total consumer memberships, and 8 percent of total revenue, Texas again led all other States.

More than a fourth of the cooperatives were situated in the West North Central Region. Consumer memberships and revenue were highest in the South Atlantic Region (21 percent and 22 percent of total, respectively).

Rural Telephone Cooperatives

As of December 31, 1974, 235 rural telephone cooperatives, with revenues of more than \$139 million, had 782,060 subscriber members. These cooperatives were all financed by the Rural Electrification Administration (REA).

The West North Central Region again accounted for more cooperatives (42 percent), subscriber members (34 percent), and revenue (33 percent) than any other region.

Tennessee and South Carolina each had 8 percent of total subscriber memberships, with Texas accounting for almost 8 percent of total revenue.

Dairy Herd Improvement Cooperatives

There were 1,105 dairy herd improvement cooperatives at the close of 1974. Memberships numbered 32,222, and cows tested totaled 2.4 million.

More than a fourth of the participants were in the West North Central Region, while the East North Central Region accounted for almost a fifth of the total number of cows tested.

Ohio and Minnesota each had 7 percent of the total cooperatives. Pennsylvania, Minnesota, and Wisconsin combined accounted for more than 31 percent of total members or herds. Fifteen percent of the tested cows were in California.

^{1/} Farm Credit Administration.

^{2/} Listed by location of cooperative headquarters.

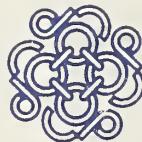

^{3/} Served by PCA in Connecticut.

^{4/} Credit Union National Association, Inc. (Includes Federally-chartered credit unions only. In addition there are about 250 State-chartered credit unions.)

^{5/} Rural Electrification Administration, USDA.

^{6/} Agricultural Research Service, USDA.

^{7/} Official DHI (includes Dairy Herd Improvement Registry).

FARMER COOPERATIVE SERVICE
U.S. DEPARTMENT OF AGRICULTURE

Farmer Cooperative Service provides research, management, and educational assistance to cooperatives to strengthen the economic position of farmers and other rural residents. It works directly with cooperative leaders and Federal and State agencies to improve organization, leadership, and operation of cooperatives and to give guidance to further development.

The Service (1) helps farmers and other rural residents obtain supplies and services at lower cost and to get better prices for products they sell; (2) advises rural residents on developing existing resources through cooperative action to enhance rural living; (3) helps cooperatives improve services and operating efficiency; (4) informs members, directors, employees, and the public on how cooperatives work and benefit their members and their communities; and (5) encourages international cooperative programs.

The Service publishes research and educational materials and issues *Farmer Cooperatives*. All programs and activities are conducted on a nondiscriminatory basis, without regard to race, creed, color, sex, or national origin.
