MONDAY (November 17) MORNING

(Thomas Jefferson Auditorium - South Building)

C. M. Ferguson, Administrator
Federal Extension Service, Chairman

- 9:00 Registration
- 9:30 Opening of Conference
Ezra T. Benson
Secretary of Agriculture
- 9:45 National Economic Situation
and Outlook
Nathan M. Koffsky, Chief
Farm Income Branch
Agricultural Marketing Service
- 10:15 Intermission
- 10:30 Panel Discussion - James P. Cavin, Chief
Statistical and Historical Research Branch
Agricultural Marketing Service, Moderator
- Nathan M. Koffsky
Agricultural Marketing Service
- John W. Lehman, Clerk
Joint Economic Committee
- Louis J. Paradiso, Assistant
Director-Chief Statistician
Office of Business Economics
Department of Commerce
- William Butler, Vice President
Chase National Bank, New York City
- J. A. Livingston

THE OUTLOOK FOR WHEAT IN 1959

Talk by Robert E. Post
Agricultural Economics Division
At the 36th Annual Agricultural Outlook Conference
Washington, D. C., November 19, 1958

The wheat outlook for 1959-60 was discussed in the August issue of the Wheat Situation, which was issued prior to the seeding time of the 1959 winter crop. Recent changes in the outlook were published in the October issue of the Wheat Situation. I have arranged to have the 3 charts which appear in the chartbook projected to illustrate my remarks.

The Wheat Situation for 1958-59

The wheat supply for the year beginning July 1, 1958 is estimated at 2,340 million bushels, shown as the last black bar on the chart (6512). This is 14 percent above the previous record supply in 1956-57. The table on the back page of this printed statement shows the items which make up the 1958-59 supply as compared with earlier years.

Domestic disappearance in 1958-59, estimated at 610 million bushels, shown as the bottom portion of the last bar, is expected to be not much different from that in 1957-58. However, exports, estimated at 430 million bushels, shown as the dotted portion of this bar, would be moderately above the 402 million a year earlier. At this level, exports would be 22 percent below the all-time record in 1956-57 of 550 million bushels.

In order to move wheat into export, prices must be at the world market level. This, by reason of domestic prices exceeding world prices, can only be accomplished by export payments. Virtually all United States wheat exports require these payments. In addition, exports have been materially increased by special Government programs, including sales for foreign currencies, barter and various donation programs. Of the total exports in 1957-58, 62.1 percent moved under these special programs; this was slightly more than the 58.0 percent average in the previous 4 years.

On the basis of this prospective supply and disappearance, the carryout at the end of the 1958-59 marketing year, indicated by the part of the black bar projecting above disappearance, would total about 1,300 million bushels. A carryout of this size would be the largest in our history and 420 million bushels above a year earlier. Moreover, the increase would be almost 3 times the reduction in carryover stocks which occurred as the result of Government programs between June 30, 1955 and June 30, 1958.

Production in 1958 reached an all-time high of 1.45 billion bushels, indicated October 1. This is shown by the solid line on this next chart (6511). This record crop resulted from record high yields, shown by the dotted line. Yields from 1940 to 1952 fluctuated around a 17.0 bushel yield average, which was almost the same as the 17.3 bushel yield in 1953. From 1953 to 1957 yields increased steadily, shown on the chart as almost a straight line. The increase in these five years amounted to about 25 percent. Then in 1958, yields shot up sharply, a 25 percent increase in one year. Dr. Reitz will tell you about the development of high yielding varieties which point to further sharp national increases in years to come.

Acreage is not shown on the chart. Although 5.3 million acres were placed in the Acreage Reserve Program, the 1958 harvested acreage amounted to 53.6 million acres. This was only 1.4 million acres below the 55 million-acre minimum allotment because of overplanting and little winterkill. The previous record production of 1.36 billion bushels in 1947 was on 74.5 million acres, 39 percent larger than in 1958. The yield in that year was 18.2 bushels compared with 27.0 bushels for 1958.

The Wheat Outlook for 1959-60

With acreage allotments and marketing quotas in effect for 1959, and without the Acreage Reserve Program, about 55 million acres of wheat will probably be harvested. Conditions for the winter crop started out excellent, but subsequently the crop has encountered a period of dry weather. If the 1956-58 average yield of 23.0 bushels per acre should be obtained, a crop of about 1,265 million bushels would be produced. Though 13 percent smaller than the 1958 production, a crop of this size would again exceed estimated domestic requirements and exports by about 200 million bushels. If disappearance should hold at the 1958-59 level of about 1,040 million bushels, a crop of this size would again increase the carryover on June 30, 1960 to over 1,500 million bushels compared with the 1,300 million bushels indicated for a year earlier.

The Price Situation and Outlook

The next chart (836) shows market prices at Kansas City and the support rate. This brings out the fact that since the inauguration of the price support program in 1938, except in the 2 years following World War II when demand was great, prices generally have averaged close to the support rates. The chart also shows that prices at Kansas City have been lowest in either June, July or August and, as quantities were withdrawn under the support program from market supplies, that prices advanced to a level near or above the support level, depending upon how tight "free" supplies became. The low month to date this season was July, after which prices have advanced each month. In most years, prices have averaged highest in March or later. This year, the high month probably will depend more than usual upon when farmers market their large remaining "free" supplies as well as the quantity farmers place under the Government price support program.

As a result of the unusual degree of withholding of wheat by farmers, prices for the 1958-59 marketing year as a whole may average only slightly lower relative to the loan than in 1957-58, when the national average price to farmers, including unredeemed wheat at the loan rate, was 6 cents below the announced support of \$2.00. The price in mid-October this year averaged \$1.73, 9 cents below the 1958 support of \$1.82. This compares with the 1957 mid-October price of \$1.92, 8 cents under the \$2.00 support. Earlier in the year, prices generally were lower relative to the support than last year. While market prices may be weakened by materially increased selling of "free" wheat at times during the remainder of the marketing year, the large unredeemed quantities which will be delivered to the CCC at the support rate will tend to offset the effect of such marketings in the annual average price received by farmers.

The "advance" minimum national average support price for 1959-crop wheat was announced on May 1 at \$1.81 per bushel. The advance support price reflects 75 percent of the estimated modernized parity price for wheat as of July 1, 1959, and compares with the \$1.82 per-bushel support for the 1958 crop. The minimum support for 1959 will not be reduced but will be increased if 75 percent of parity as of July 1, 1959 indicates a higher support price.

Wheat: Supply and distribution, United States,
1953-58 and 1959 projected

Item	Year beginning July						
	1953	1954	1955	1956	1957 1/	1958 1/ 2/	1959 3/
	Mil. bu.	Mil. bu.	Mil. bu.	Mil. bu.	Mil. bu.	Mil. bu.	Mil. bu.
<u>Supply</u>							
Carryover on July 1	605.5	933.5	1,036.2	1,033.4	908.8	880	1,300
Production	1,173.1	983.9	934.7	1,004.3	947.1	1,450	1,265
Imports 4/	5.5	4.2	9.9	7.8	11.5	10	10
Total	1,784.1	1,921.6	1,980.8	2,045.5	1,867.4	2,340	2,575
<u>Domestic disappearance</u>							
Food 5/	487.1	485.9	481.5	482.4	484.0	484	484
Seed	69.5	64.8	67.7	57.7	63.5	66	66
Industry	.2	.2	.7	.5	.3	---	---
Feed 6/	76.8	60.1	51.2	46.5	36.6	60	60
Total	633.6	611.0	601.1	587.1	584.4	610	610
<u>Exports 7/</u>	217.0	274.4	346.3	549.6	402.5	430	
Total disappearance	850.6	885.4	947.4	1,136.7	986.9	1,040	
<u>Stocks on June 30</u>	933.5	1,036.2	1,033.4	908.8	880.5	1,300	

1/ Preliminary.

2/ Imports and distribution are estimated.

3/ Projected.

4/ Excludes imports of wheat for milling in bond and export as flour.

5/ Includes shipments to United States Territories and military food use at home and abroad.

6/ This is the residual figure, after all other disappearance is accounted for.

7/ Actual exports. Prior to October 1954 they included those for civilian feeding under the military supply program.
