Part II: Feedlot Health Management Report

April 1995

Acknowledgements

This report has been prepared from material received and analyzed by the U.S. Department of Agriculture (USDA), Animal and Plant Health Inspection Service (APHIS), Veterinary Services (VS).

The Cattle on Feed Evaluation was a cooperative effort between State and Federal agricultural statisticians, animal health officials, university researchers, and extension personnel. We want to thank the National Agricultural Statistics Service (NASS) enumerators and State and Federal Veterinary Medical Officers (VMO's) who visited the farms and collected the data for their hard work and dedication to the National Animal Health Monitoring System (NAHMS).

The roles of the producer, Area Veterinarian in Charge (AVIC), NAHMS Coordinator, Veterinary Medical Officer (VMO), Animal Health Technician (AHT), and NASS enumerators were critical in providing quality data for this report. All participants are to be commended for their efforts, particularly the producers whose voluntary efforts made the study possible.

Introduction

As part of the National Animal Health Monitoring System (NAHMS), the USDA:APHIS:Veterinary Services (VS) conducted a National feedlot study designed to provide both participants and the industry with information on feedlot animal health, productivity, and management practices.

The USDA's National Agricultural Statistics Service (NASS) collaborated with VS to select a producer sample (3,214 feedlots) that was statistically **designed to provide inferences to the nation's feedlot animal population**. Included in the study were 13 major cattle-on-feed States that accounted for 85.8 percent of the U.S. cattle-on-feed inventory as of January 1, 1994 (shown below).

States Participating in the NAHMS Cattle on Feed Evaluation and Percent of U.S. Cattle-on-Feed Inventory, January 1, 1994

Total = 85.8 percent of the U.S. inventory.

#2650

This report is the second of a two-part release of National information resulting from the NAHMS Cattle on Feed Evaluation (COFE):

- *Part I: Feedlot Management Practices* was released in January 1995. NASS interviewers contacted a total of 3,214 producers by telephone or personal interview from August 1 through September 16, 1994, to collect data for Part I.
- Part II: Feedlot Health Management Report contains health management data collected from August through September by telephone interview from producers with feedlots of less than 1,000-head capacity. State and Federal Veterinary Medical Officers collected the data from feedlots of 1,000 head or more capacity through personal interviews from October 3 through December 21, 1994.

USDA:APHIS:VS 1 Cattle on Feed Evaluation

For both reports, percent of cattle placed refers to cattle placed on feed from July 1, 1993, through June 30, 1994.

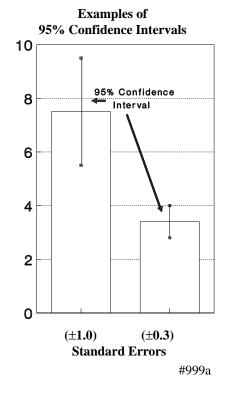

Descriptive tables in Section I of this report are population estimates, such as means and proportions which have been **weighted to represent the population** (85.8 percent of the U.S. cattle-on-feed inventory). Section II describes the participating operations whose managers provided the data from which National estimates were derived.

The estimates are provided with a measure of variability called the standard error, denoted by (\pm) . Chances are 95 out of 100 that the interval created by the estimate plus or minus two standard errors will contain the true population value. In the example at right, an estimate of 7.5 percent with a standard error of ± 1.0 results in a range of 5.5 to 9.5 (two times the standard error above and below the estimate).

Identification numbers have been assigned to each graph in this report for reference purposes (notice the #999a notation below the graph at right).

Percent of Operations Using Antibiotics as a Health or Production Management Tool by Duration

#2770

4. For large operations (1,000 head or more capacity), percent of operations by type of antibiotic used in feed or water as a health or production management tool:

Type of Antibiotics	Percent Operations	Standard Error
Bacitracin	0.5	(± 0.2)
Chlortetracycline	45.8	(± 2.3)
Chlortetracycline/		
Sulfamethazine	26.6	(± 2.1)
Neomycin	2.0	(± 0.7)
Oxytetracycline	29.6	(± 2.2)
Sulfamethazine/		
Sulfadimethoxine	4.5	(± 1.0)
Tetracycline	7.0	(± 1.3)
Tylosin	42.8	(± 2.1)
Other	1.0	(± 0.4)

USDA:APHIS:VS 5 Cattle on Feed Evaluation

B. Antibiotic Injections - Long-lasting

1. Of all cattle placed on feed, percent of cattle given a long-lasting (label specifies effect greater than 24 hours) antibiotic between arrival and exiting the feedlot:

Small (<1,0	000 Head)	Large (1.0	00+ Head)	<u>To</u>	<u>otal</u>
Percent	Standard	Percent	Standard	Percent	Standard
Cattle	Error	Cattle	Error	Cattle	Error
16.4	(± 1.9)	13.1	(± 0.9)	13.5	(± 0.8)

2. For large operations (1,000 head or more capacity) giving long-lasting antibiotics, percent of operations by route antibiotic was given:

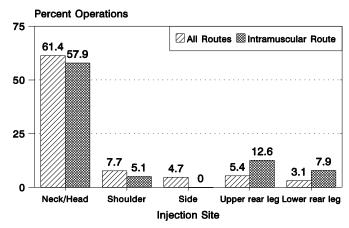

Route	Percent Operations	Standard Error
Intramuscular	62.8	(± 2.1)
Subcutaneous	54.4	(± 2.1)
Intravenous	8.7	(± 1.1)
Other	0.0	(± 0.0)

3. For large operations (1,000 head or more capacity) giving long-lasting antibiotics, percent of operations giving all long-lasting antibiotic injections in one site by site:

Percent Operations	•

	All	Standard	Intramuscular	Standard
<u>Site</u>	Routes	Error	Route	Error
Neck/Head	61.4	(± 2.0)	57.9	(± 2.6)
Shoulder	7.7	(± 1.1)	5.1	(± 1.1)
Side	4.7	(± 1.0)	0.0	(± 0.0)
Upper rear leg	5.4	(± 1.0)	12.6	(± 1.8)
Lower rear leg	3.1	(± 0.7)	7.9	(± 1.3)

Percent of Operations* Giving All Long-Lasting Antibiotics In One Site

^{*}Percent of operations with 1,000 head or more capacity giving long-lasting antibiotics.

#2772

C. Antibiotic Injections - Regular

1. Of all cattle placed on feed, percent of cattle given a regular antibiotic (label specifies effect 24 hours or less) between arrival and exiting the feedlot:

<u>Small (<1.</u>	000 Head)	Large (1,0	000+ Head)	$\mathbf{T}_{\mathbf{C}}$	<u>otal</u>
Percent	Standard	Percent	Standard	Percent	Standard
Cattle	Error	Cattle	Error	Cattle	Error
10.0	(± 1.5)	16.1	(± 1.0)	15.4	(± 0.9)

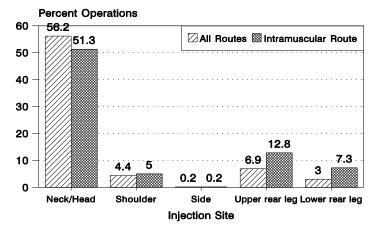

2. For large operations (1,000 head or more capacity) giving regular antibiotics, percent of operations by route antibiotic was given:

Route	Percent Operations	Standard Error
Intramuscular	84.3	(± 1.6)
Subcutaneous	26.4	(± 1.9)
Intravenous	29.1	(± 1.9)
Other	0.4	(± 0.2)

3. For large operations (1,000 head or more capacity) giving regular antibiotics, percent of operations giving all regular antibiotic injections in one site by site:

	All	Standard	Intramuscular	Standard
<u>Site</u>	Routes	Error	Route	Error
Neck/Head	56.2	(± 2.1)	51.3	(± 2.4)
Shoulder	4.4	(± 0.9)	5.0	(± 1.1)
Side	0.2	(± 0.1)	0.2	(± 0.2)
Upper rear leg	6.9	(± 1.1)	12.8	(± 1.6)
Lower rear leg	3.0	(± 0.7)	7.3	(± 1.2)

Percent of Operations* Giving All Regular Antibiotics in One Site

*Percent of operations with 1,000 head or more capacity giving regular antibiotics.

Pour-ons, dusting powder, or animal spray	rs 35.7	(± 1.9)
Feed additive that kills larva	6.5	(± 0.9)
Traps	13.6	(± 1.4)
Granular fly bait	77.6	(± 1.7)
Other	7.4	(± 1.0)

H. Mexican-Origin Cattle

Percent of large operations (1,000 head or more capacity) feeding cattle originating from Mexico at the same time as:

 Percent Operations
 Standard Error

 U.S. beef cattle and calves to be used for breeding
 U.S. dairy cattle and calves to be used for breeding
 (±0.4)
 (±0.1)

I. Information Sources

1. Percent of large operations (1,000 head or more capacity) by importance of animal health information source for the feedlot:

	Percent Operations by Importance of Source							
	Not	Standard	Moderately	Standard	Very	Standard	Extremely	Standard
Source	<u>Important</u>	<u>Error</u>	Important	Error	<u>Important</u>	Error	<u>Important</u>	Error
Veterinarian	1.0	(± 0.4)	7.6	(± 1.1)	34.6	(± 1.9)	56.8	(± 2.0)
Cooperative Extension								
Service/University	37.8	(± 2.0)	42.5	(± 2.0)	17.2	(± 1.5)	2.5	(± 0.6)
Producer magazines	19.9	(± 1.6)	59.6	(± 2.0)	18.6	(± 1.6)	1.9	(± 0.5)
Producer organizations	25.3	(± 1.7)	49.6	(± 2.0)	21.6	(± 1.6)	3.5	(± 0.6)
Nutritionist	10.2	(± 1.3)	17.9	(± 1.6)	39.8	(± 2.0)	32.1	(± 1.8)
Feed sales person	41.7	(± 1.9)	36.4	(± 1.9)	16.2	(± 1.5)	5.7	(± 1.0)
Animal health salesperson	23.2	(± 1.7)	39.0	(± 1.9)	31.7	(± 1.9)	6.1	(± 0.9)
Other producers	23.1	(± 1.7)	44.6	(± 2.0)	27.9	(± 1.8)	4.4	(± 0.7)

II. Sample Profile of Participating Operations

A. Participating Operations by Number of Placements Between July 1993 and June 1994

		Number of Operations	
	Small	Large	
Number Placed	<1,000 Head Capacity	1,000 Head or More Capacity	<u>Total</u>
1-2,499	908	135	1,043
2,500-9,999	4	131	135
10,000-39,999	0	116	116
40,000+	0	71	71
Not available (missing)	_1	0	1
Total	913	453	1,366

Materials Available from NAHMS

One-page discussions and graphic presentations of the COFE results (also accessable on the APHIS gopher):

- *January 1995*, Topics include Feedlot Quality Assurance, Environmental Monitoring by Feedlots, and Mexican-Origin Cattle in Feedlots
- *March 1995*, Topics include Injection Sites, Vaccination Practices, and Information Sources
- Summer 1995, Escherichia coli and Salmonella testing results

Tabular summary of COFE results with graphic presentations:

- January 1995, Part I: Feedlot Management Practices
- April 1995, Part II: Feedlot Health Management Report (this report)

Results of NAHMS studies are also available on the **pork**, **dairy cattle**, **and beef cow/calf** industries.
