INTRODUCTION

The EZPSD procedure is designed to meet three needs. The first is to make available to SPEAKEZ users the Foreign Agricultural Service's Production, Supply and Distribution (PSD) data base. The SPEAKEZ/FEDEASY routines are powerful statistical, econometric, and mathematical tools that will greatly enhance the capabilities of USDA analysts working with the PSD data. The second need is to provide an inexpensive but flexible means of listing the FAS data. The EASYSTRIEVE package is used to accomplish this at considerably less cost and greater ease than possible with FORESIGHT or SPEAKEZ. However, knowledge of EASYSTRIEVE is not usually required. The third and final need is ancillary to retrieving the FAS PSD data. It is to provide batch processing of SPEAKEZ commands from the interactive terminal.

Given the sensitivity of the contents of the FAS PSD data base, the information generated by these routines should not be released to the public without the approval of the Director of the responsible FAS commodity division.

Once in READY mode (using ERSPROC) the EZPSD procedure is entered by typing EZPSD. If you are unfamiliar with what an EZPSD routine will do, type HELP. The country and commodity codes are to be found in Appendices B through D, but they are also available in the Index to the FAS PSD Data Base. The following general points pertain to all batch jobs:

- 1) The batch jobname can be up to 8 characters of your choosing (per organizational standards).
- 2) Before using EZPSD you should know your 10 digit account number.
- 3) You are encouraged to submit batch jobs as priority 1 (weekend) at one third of the regular cost with overnight turnaround under normal circumstances.
- 4) When generating XEROX output, you should notify the remote terminal operator and complete the appropriate forms.
- 5) Only if a job is exceptionally long will a job class other than C be required. (For example, a seven commodity GOL region report (routine SUMRGN) should be run under class D).
- 6) If you are submitting more than one batch job, EZPSD will remember this JCL information from the previous batch job. To repeat this information, send a carriage return when prompted for an entry.

SUMMARY OF EZPSD ROUTINES

<u>EZPSD Routine</u>	<u>Description</u>
BRIDGE	will place into a CHECKPOINT or SPEKSAVE file PSD data for a particular country and commodity with attributes of your choice.
CMDY	will list all country data for a specified commodity. A report format must exist (see MAKERPT).
CTRY	will list all commodity data for a specified country.
MAKERPT	will permit creation and/or change of the report formats used in CMDY, RGN, SUM and SR.
RGN	will list the commodity data by GOL region. (See Appendix A)
SPKBATCH	will allow creation and/or change of SPEAKEZ commands then submit them for batch execution.
SPKROG	is like BRIDGE but will also allow the user to execute your own SPEAKEZ program on the PSD data.
SUMRGN	will aggregate several commodities using a common report format and list them by GOL region aggregation.
SUM	will aggregate several commodities using a common report format, and list them by country.
TRENDS	is like BRIDGE but will also run time trends using four OLS functional forms: T, T**2, T**3, and log of y
QUIT	will end execution of EZPSD procedure

BRIDGE

DESCRIPTION:

The BRIDGE routine will place FAS PSD data into a CHECKPOINT file for use in SPEAKEZ. This routine will ask you for a country name, its 2 character OASIS country code, its 3 digit FAS country code, the commodity name, its 2 character OASIS commodity code and its 7 digit FAS commodity number. Please see Appendix D for the country codes, and Appendix B for the commodity codes.

Next, the routine requests the attribute codes desired. Please see Appendix C for the attribute codes. Either FAS or OASIS 3 character codes (PRO, BSK, SPC, SCC, etc) may be used. A vector of years is automatically created with the attribute code of YER. Each data vector is assigned a 7 letter SPEAKEZ name with the first two characters being the commodity code, the next three characters the attribute code, and the last two characters the country code.

If production and rough production are specified, then their ratio is calculated with an attribute of YMR. If production and area harvested are specified, then their ratio is calculated with an attribute code of YHH. The commodity and country names are placed in XXYYNAM, the data vector names are elements in XXYYLST, and the argument list (see the SPEAKEZ manual) is XXYYARG, where XX is the commodity code and YY is the country code. The variables XXYNAM, XXYYLST and XXYYARG are placed in the checkpoint file with the data.

(See the example on the next page).

CMDY

DESCRIPTION:

The CMDY (commodity) routine will submit a batch job that will list the FAS PSD data for a specified commodity. The listing will include data for all countries in the data base, even those that are not currently maintained by FAS. You must enter the 7 digit FAS commodity code and the one letter report type. The routine will ask you if a standard report format is to be used. If not, it will ask for the name of file where your non-standard formats are kept. A report format of this code and type must exist, but if not, you may create such a report format using MAKERPT.

CTRY

DESCRIPTION:

The CTRY (country) routine will submit a batch job that will list all the commodity data for a specified country. The listing will include data for all commodities in the data base, even those that are not currently maintained by FAS. You only enter the 3 digit FAS country code; no report format is required. Since a generalized supply and utilization table is employed, you should be alert to the possible truncation of the high order (greater than 9,999,999) digits of the following fields: beginning stocks, ending stocks and uses one, two and three. The report headings are are the attribute codes (see Appendix C) which will vary in meaning by commodity. Contact the FAS commodity division for the precise significance of the attribute fields.

EXAMPLE:

```
ENTER ROUTINE CODE (QUIT OR HELP)

DESCRIPTION:

The MAKERPT (make EZPSD report) routine allows you to create and/or modify the report formats. Each format is identified by the 7 digit FAS commodity code (from Appendix B) plus a one letter report type. (Type A is designated as the fundamental S and U format for a commodity but other formats may be available.) The routine will ask for the commodity code and report type. You should enter the code and type for the new report format, or the old code and type if an existing format is to be modified.

Next the routine will ask if you are using a standard report format. Enter 'yes' unless you have already set up this report in your own report format file. The routine will ask you for a name for your report format file, suggesting 'EZPSD.DATA' if you don't have one already. However the name is your choice; you prefix will be added automatically. (ESCS users are advised to follow agency file naming conventions.) For the new format, it will look for an existing format under that code and type and use it. If there is no matching format it, will ask you for an existing format of similar layout. (All report formats must have attributes as column headings and years as stubs).

After finding a format, you can use the TSO EDITOR (which similar to the SPEAKEZ EDITOR) to edit the standard report format (or your own report format) until it meets you satisfaction. Upon entering the command 'STOP' the EDITOR will save the format into your personal report format file. (In technical terms, your EZPSD.DATA file is a partitioned data set with member names N9999999 where N is the report type and 9999999 is the commodity code. However MAKERPT will take care of these details.) If are you especially proud of your report format, contact Walt Houser so that it can be placed in the standard report format file.

There are four kinds of EASYTRIEVE statements used in the EZPSD report formats. In order of appearance, the first is the EQUATE statement (which is optional). It allows one to make caculations of ratios or sums of the data. For example:

XX-(W 9 NO) = BSK + IMP + PRO

The field XX will be a 9 digit work field used for caculation as indicated by the phrase in parentheses (W 9 NO) where 0 (a zero) is the number decimal places and 9 is the number of digits. XX will be the sum of beginning stocks (BSK), imports (IMP) and production (PRO).

If you wish to multiply or divide two fields, for each such EQUATE you must insert a COMPUTE statement just above the T1 statement. It is similar to the EQUATE but instead of using the attribute codes, the variables are in the form TOTN which refers to the Nth quantitative variable appearing in the LIST statement. For example:

```
YY-(W 2 P2) = PRO / HAR  
COMPUTE TOT3 = TOT2 / TOT1  
T1 CORN AREA, PRODUCTION AND YIELD  
LIST SPACE 3 DETAIL SKIP YEAR MORE
```

```
HAR 'AREA*IN,1000*HA' MORE  
PRO 'PRODUCTION,IN*1000,METRIC*TON' MORE  
YY 'YIELD*IN,MT*PER*HA'
```

Excluding nonquantitative fields such as YEAR, the fields HAR, PRO, and YY are 1,2 and 3 in order in the LIST statement; therefore they are TOT1, TOT2, and TOT3 in the COMPUTE statement. Notice that the calculation in the in the EQUATE must correspond to that in the COMPUTE.

The next statement is the TITLE statement. It is in the format:

```
T1SOYOIL (3143040) SUPPLY AND UTILIZATION
```

T1 must always be the first two characters of the title statement. The text following the T1 will appear centered by EASYTRIEVE as the first line of the title. The number 3143040 is the 7 digit FAS code for soyoil and is included in the title to document the data; it is not required.

Finally, there is the LIST statement, which defines the column headings. For example:

```
LIST SPACE 1 DETAIL SKIP BSK 'BEGINNING,STOCKS' MORE  
PRO 'PRODUCTION' IMP 'IMPORTS' EXP 'EXPORTS' MORE  
TDU 'TOTAL,DOMESTIC,CONSUMPTN' ESK 'ENDING,STOCKS'
```

This SPACE 1 indicates that there is to be one space between each column on the report. The DETAIL requires all data lines to be printed. The SKIP causes the report to be double spaced. YEAR is the column of years; in most formats they act as stubs. If the LIST statement is not completed, the last entry on the line should be MORE. The BSK is the 3 character FAS attribute code (Appendix C) of the data to be printed with the heading in single quotes after it. The actual data associated with an attribute code will vary by commodity. Each heading may be 3 lines with no more than 10 characters per line, for a maximum of 30 characters per attribute. EASYTRIEVE will center each line of the heading for you. Each of these lines must be separated by a comma; embedded blanks in the heading must be replaced by asterisks (*). For example:

```
US5 'FEED*AND,SEED*USE'
```

The last column entry must not have a MORE after it.

If the EASYTRIEVE job will not run because the desired number of columns will not fit into one page of output, the width of the PSD attributes can be reduced. Type the attribute code followed immediately by the maximum number of digits expected for that field (not including commas or negative signs). For example, for Beginning Stocks, enter BSK7 for seven digits, BSK5 for five digits, or BSK3 for three digits. Three, five, and seven digits may be used; the default width is nine digits. The width specified here will also be used for the regional (RGN), summation (SUM) and summation by region (SUMRGN) routines also, so be careful to specify sufficient digits for these aggregated values as well. If you still have difficulty in reducing the columns enough to get the report to run, you may wish to use the EQUATE statement to change the unit of measure. (See one of the grain report formats, i.e A2111010, for an example.) Do not forget to use the SPACE 1 option described above.

THANK YOU FOR USING ECPSD

READY

DESCRIPTION:

The RGN (region) routine will submit a batch job that will aggregate data for a specified commodity into GOL regions. The listing will include data for only the countries shown in Appendix A, whether or not that country's data is currently maintained by FAS. You must enter the 7 digit FAS commodity code (Appendix B) and the one letter report type. The routine will ask if one is using a standard report format. A report format with this commodity code and report type must exist, but if not you may create one using MAKERPT.

EXAMPLE:

```
ENTER ROUTINE CODE (QUIT OR HELP)

SPKBATCH

DESCRIPTION:

The SPKBATCH (SPEAKEZ Batch job) routine will submit a data set of SPEAKEZ commands for batch execution without you having to prepare the necessary JCL. You may create a set of commands or change an existing set using the TSO Editor.

If this is a new set of SPEAKEZ commands, they will not be saved unless you enter SAVE XXX. Then the file will have the user's system prefix and the suffix of DATA. (e.g. ERSNN. XXX.DATA) You finish this editing with a STOP. If the SPEAKEZ commands are not to be saved, then you do not need to worry about the accumulation of unwanted data sets. If this is an old data set of SPEAKEZ commands, then any changes made will be executed but not saved unless you enter SAVE. (XXX is not necessary in this case).

If you are using a MYKEEP file with a nonstandard name, the routine will ask for the name of this file. You must enter its complete name including prefix and suffix. (e.g. ERS45. ER3WH.SPEAKEZ.MYKEEP.DATA) Next, the routine will ask for the library name (or DDNAME for those who understand JCL). This should be 8 characters of the user's choosing, consistent with the preceding SPEAKEZ commands. (e.g. GET MYPROG ON DDNAME) However if you enter MYKEEP, you will be replacing the standard file with your file name as the default (e.g. GET MYPROG ON MYKEEP). Therefore you will not be using a mykeep file with the standard name (e.g. ERS45.SPEAKEZ.MYKEEP.DATA). In any case when asked if you are using a mykeep file with a standard name, only say YES if one currently exists. Finally the routine will ask if you are using a checkpoint file. If so, the routine requests the name of this file, which must already exist. (e.g. CHKPOINT, not ERSNN.CHKPOINT.SPEKSAVE).

Example of SPKBATCH

SPKPROG

DESCRIPTION:

The SPKPROG (SPEAKEZ Program) routine will place FAS PSD data into a CHECKPOINT file for use in SPEAKEZ. Also it will execute in batch a SPEAKEZ program in deck format from your MYKEEP FILE. Otherwise this routine is the same as BRIDGE. Your program will find the PSD variable names as name-literal elements in the variable VARLIST. The vector of years (i.e. 60,61,...78) is also set as the variable T.

EXAMPLE:

```
ENTER ROUTINE CODE (QUIT OR HELP)

```

DESCRIPTION:

The SUM (summation) routine will submit a batch job that will aggregate up to 8 specified commodities and list this aggregation for all countries in the FAS PSD data base. The listing will include data for all countries in the data base, even those that are not currently maintained by FAS. You should enter between 2 and 8 of the 7 digit FAS commodity codes (Appendix B) in ascending numerical order. The routine will ask if a standard report format is to be used. If not, it will ask for the name of file where your non-standard formats are kept. There must be a report format of the specified type for the first commodity code. All of the commodities must be comparable and additive for the fields listed in the report format (which must exist or must be created using MAKERPT).

SUMRGN

DESCRIPTION:

The SUMGRN (summation by region) routine will submit a batch job that will aggregate up to 8 specified commodities and list them aggregated further by GOL region. The listing will include data for only the countries shown in Appendix A, even if that data is not currently maintained by FAS. You should enter between 2 and 8 of the 7 digit FAS commodity codes (Appendix B) in ascending numerical order. The routine will ask if a standard report format is to be used. If not, it will ask for the name of the file where your nonstandard formats are kept. There must be a report format of the specified type for the first commodity code. All of the commodities must be comparable and additive for the fields listed in this report format (which must exist or must be created using MAKERPT).

TRENDS

DESCRIPTION:

The TRENDS routine will place FAS PSD data into a CHECKPOINT file for use in SPEAKEZ. Then it runs time trends on this same data using four functional forms:

$$\begin{aligned}Y &= aT + e \\Y &= aT + bT^2 + e \\Y &= aT + bT^2 + cT^3 + e \\ln Y &= T + e\end{aligned}$$

The routine will ask you for a country name, its 2 character OASIS (or UN) country code, its 3 digit FAS country code, the commodity name, its 2 character OASIS commodity code and its 7 digit FAS commodity number. (See Appendices B and D). Next, the routine requests the attribute codes desired; you may use either FAS or OASIS 3 character codes (PRO, BSK, SPC, SCC, etc, see Appendix C). Please see BRIDGE for further details.

(See the example on the next page.)

Example of TRENDS

ENTER ROUTINE CODE (QUIT OR HELP)

TRENDS

THIS JOB RUNS TRENDS ON THE FAS PSD DATA
ENTER THE COUNTRY NAME

AUSTRALIA

ENTER THE 2 CHARACTER OASIS COUNTRY CODE

602

ENTER THE 3 DIGIT FAS COUNTRY CODE

602

ENTER THE COMMODITY NAME

WHEAT

ENTER THE 2 CHARACTER OASIS COMMODITY CODE

2111010

ENTER THE 7 DIGIT FAS COMMODITY CODE

L

WHEAT DATA FOR AUSTRALIA WILL BE SAVED ON ERS45.2111010602.SPEKSAVE.
THE FAS COMMODITY CODE IS ...L AND COUNTRY CODE IS 602.

IS THIS CORRECT? (Y OR N)

N

PLEASE TRY AGAIN.

ENTER THE COUNTRY NAME

AUSTRALIA

ENTER THE 2 CHARACTER OASIS COUNTRY CODE

AU

ENTER THE 3 DIGIT FAS COUNTRY CODE

602

ENTER THE COMMODITY NAME

BEEF AND VEAL

ENTER THE 2 CHARACTER OASIS COMMODITY CODE

BV

ENTER THE 7 DIGIT FAS COMMODITY CODE

5311000

BEEF AND VEAL DATA FOR AUSTRALIA WILL BE SAVED ON ERS45.BUAU.SPEKSAVE.
THE FAS COMMODITY CODE IS ...5311000 AND COUNTRY CODE IS 602.

IS THIS CORRECT? (Y OR N)

Y

ENTER NO MORE THAN 7 PSD 3 CHARACTER ATTRIBUTE CODES

IN THIS FORMAT: AHH,SPR,SPC,SMC,UMC,UDC,COT

THE YEAR INDEX IS AUTOMATICALLY BUVEAU. IF THE
CODES ARE UNCHANGED FROM THE PRECEDING BRIDGE, ENTER SAME.

SAME

HAR,PRO,IMP,BSK,EXP,TDU,US1

IS THIS CORRECT? (Y OR N)

Y

ENTER THE JOBNAME

ERS3WH

ENTER YOUR 10 DIGIT ACCOUNT NUMBER

0123456789

ENTER THE NUMBER OF COPIES DESIRED

1

ENTER THE REMOTE TERMINAL (RMT13 FOR ESCS OR RMT3 FOR FAS)

RMT3

IS THE OUTPUT TO BE ON XEROM? (Y OR N)

N

WHAT IS YOUR PRIORITY?

1 FOR WEEKEND, 3 FOR AVERAGE, AND 13 FOR ASAP)

1

WHAT IS THE JOB CLASS? (USUALLY C)

C

JOBNAME=ERS3WH ACCOUNT=0123456789 COPIES=1

APPENDIX A

Country composition of regions in the world grain-oilseeds-livestock model

Regions	Composition
I. Developed countries:	
United States	United States
Canada	Canada
EC-6	Belgium, France, West Germany, Italy, Luxembourg, Netherlands
EC-3	Denmark, Ireland, United Kingdom
Other Western Europe	Austria, Finland, Greece, Iceland, Malta, Norway, Portugal, Spain, Sweden, Switzerland
Japan	Japan
Oceania	Australia, New Zealand
South Africa	Botswana, Lesotho, Namibia, Republic of South Africa, Swaziland
II. Centrally planned countries:	
Eastern Europe	Albánia, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, Yugoslavia
Soviet Union	Soviet Union
China	People's Republic of China
III. Developing countries:	
Middle America	Mexico, Bahamas, Bermuda, Costa Rica, Dominican Republic, El Salvador, Guatemala, Haiti, Honduras, British Honduras, Jamaica, Nicaragua, Panama, Trinidad & Tobago, Other Caribbean Islands
Argentina	Argentina
Brazil	Brazil
Venezuela	Venezuela
Other South America	Bolivia, Chile, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Surinam, Uruguay

Continued--

* Alternative Futures for World Food in 1985: Volume 1, World GOL Model Analytical Report, USDA, ESCS, FAER No. 146, Table 2, page 9-10.

Country composition of regions in the world grain-oilseeds-livestock model
--Continued

High-income North Africa and Middle East	Algeria, Bahrain, Cyprus, Iran, Iraq, Israel, Kuwait, Libya, Oman, Qatar, Saudi Arabia, United Arab Emirates
Low-income North Africa and Middle East	Egypt, Jordan, Lebanon, Morocco, Sudan, Syria, Tunisia, Turkey, Yemen (Aden), Yemen (Sana)
East Africa	Kenya, Malagasy Republic, Malawi, Mozambique, Rhodesia, Tanzania, Uganda, Zambia
Central Africa	Angola, Burundi, Cameroon, Central African Empire, Chad, Congo, Ethiopia, Djibouti, Benin, Gabon, Gambia, Ghana, Guinea, Equatorial Guinea, Guinea-Bissau, Ivory Coast, Liberia, Mali, Mauritania, Mauritius, Niger, Nigeria, Reunion, Rwanda, Senegal, Sierra Leone, Somalia, Togo, Upper Volta, Zaire
India	India
Other South Asia	Afghanistan, Bangladesh, Bhutan, Nepal, Pakistan, Sri Lanka
Thailand	Thailand
Other Southeast Asia	Burma, Cambodia, Laos, South Vietnam <u>1/</u>
Indonesia	Indonesia
High-income East Asia	Hong Kong, Singapore, South Korea, Taiwan, Brunei
Low-income East Asia	Malaysia, Philippine Islands
Rest of world	North Korea, North Vietnam <u>1/</u> , Mongolia, Cuba, Pacific Islands, Papua-New Guinea

1/ The model was designed before the reunification of North and South Vietnam into the People's Republic of Vietnam.

THE EZPSD PROCEDURE WAS WRITTEN BY WALTER Houser, ESCS, FDCD
THIS PROCEDURE ALLOWS ACCESS TO THE FOREIGN AGRICULTURAL SERVICE'S
P.S.D. DATA BASE USING EASYTRIEVE. THE OUTPUT IS EITHER A
LISTING OR A MEMBER IN A PARTITIONED DATA SET. IN THE LATTER CASE
A SET OF SPEAKEZ COMMANDS ARE GENERATED AND RUN USING THE PROGRAM
PSOGET TO TRANSFER THIS DATA INTO A CHECKPOINT (SPEKSAVE) FILE.
EZPSD MAY BE USED TO CREATE, EDIT AND SUBMIT BATCH SPEAKFZ JOBS.
THE HELP PARAGRAPH DESCRIBES THE ROUTINES THAT ARE AVAILABLE.

JANUARY 30, 1979

THE EASYTRIEVE STATEMENTS ARE OF THREE BASIC TYPES.      00001600
THE FIRST IN ORDER OF APPEARANCE IS THE EQUATE      00001610
STATEMENT, WHICH IS OPTIONAL. IT IS OF THE FORM:      00001620
  'X=(W 9 NO) = BSK + IMP + PRU'      00001630
THE FIELD X WILL BE THE SUM OF BEGINNING STOCKS,      00001640
IMPORTS, AND PRODUCTION (ASSUMING NORMAL FIELD      00001650
ASSIGNMENTS). FOLLOWING THE X IN THE EQUATE      00001660
STATEMENT IS THE FIELD DESCRIPTION (W 9 NO).      00001670
THE 'W 9' MEANS THIS IS A WORK FIELD 9 DIGITS LONG.      00001680
THE NO MEANS THAT THIS IS A QUANTATATIVE FIELD WITH      00001690
ZERO (0) DECIMAL PLACES. FURTHER INFORMATION MAY      00001700
BE FOUND IN THE EASYTRIEVE MANUAL.                  00001710
00001720
00001730
00001740
00001750
00001760

00001950
00001960
00001970
00001980
00001990
00002000

THE NEXT STATEMENT IS THE TITLE STATEMENT. IT IS      00001740
IN THE FORM:      00001750
  'T1SOY0IL (3143040) SUPPLY AND DISTRIBUTION'      00001760
THE 1 AFTER THE T INDICATES THE LINE NUMBER; THERE      00001770
CAN BE UP TO 4. THE TEXT FOLLOWING THE T1 WILL      00001780
APPEAR ON THE FIRST TITLE LINE.                  00001790
00001800
00001810
00001820
00001830
00001840
00001850
00001860
00001870
00001880
00001890
00001900
00001910
00001920
00001930
00001940
00001950
00001960
00001970
00001980
00001990
00002000

LAST IS THE LIST STATEMENT. IT IS IN THE FORM:      00001810
  'LIST SPACE 1 DETAIL SKIP YEAR MORE'      00001820
THE SPACE 1 INDICATES THAT THERE IS TO BE ONE SPACE      00001830
BETWEEN EACH COLUMN ON THE REPORT. THE DETAIL SAYS      00001840
ALL DATA LINES ARE TO BE PRINTED. THE SKIP CAUSES      00001850
THE REPORT TO BE DOUBLE SPACED. YEAR IS THE COLUMN      00001860
OF YEARS. IF THE LIST STATEMENT IS NOT COMPLETED,      00001870
THE LAST ENTRY ON THE LINE SHOULD BE 'MORE'.      00001880
NEXT YOU WILL FIND THE 3 CHARACTER FAS ATTRIBUTE      00001890
CODE WITH THE COLUMN HEADERS IMMEDIATELY FOLLOWING      00001900
IN SINGLE QUOTES.      00001910
EACH HEADER MAY BE 3 LINES OF NO MORE THAN 10      00001920
CHARACTERS PER LINE, FOR A MAXIMUM OF 30 CARACÉTERS      00001930
PER ATTRIBUTE. EACH LINE MUST BE SEPARATED BY COMMAS.      00001940
EMBEDDED BLANKS MUST BE REPLACED BY ASTERIX (*).      00001950
FOR EXAMPLE: HAR 'AREA,HARVESTED,IN*HECTARE' MORE      00001960
THE LAST COLUMN ENTRY MUST NOT HAVE A MORE AFTER IT.      00001970
00001980
00001990
00002000

IF YOU ARE PATIENT ENOUGH TO READ THIS FAR, THEN      00001990
I'LL BE HEARING FROM YOU.                          00002000

```
