GUIDE TO TABLES

<u>Table</u>	<u>Brief title</u>	<u>Supplement page</u>	<u>Table</u>	<u>Brief title</u>	<u>Supplement page</u>
1-3	Index of supply-utilization of farm food commodities		38	Total poundage for each food group, all foods and index (poundage) .....	45
1	Percentage of total utilization in each year .....	4	39-42	Index of per capita food consumption (price weighted)	
2	Percentage of 1947-49 total utilization .....	5	39	Index, total and by food groups .....	46-47
3	Average farm value in 1947-49 and relative importance of individual commodities in selected years .....	6	40	Price weights, aggregates in base period .....	48-49
4-7	Volume of farm marketings and home consumption		41	Flour and sugar prices .....	*
4	Total and by commodity groups, indexes .....	7	42	Relative importance of major food groups in selected years .....	50
5	Total and per capita, indexes ..	8	43	Index of per capita food utilization .....	50
6	Price weights and aggregates in base period .....	9-12	44	Nutrients available per capita per day .....	51
7	Relative importance of major groups in selected years .....	13	45	Nutrients available per capita per day, indexes .....	52
8-26	Per capita consumption, primary distribution weight		46	Margarine fortification .....	*
8	Meat, fish, poultry, and eggs ..	14	47	Nutrients contributed by food groups .....	53-55
9	Dairy products .....	15	48	Farm value and retail cost of farm food products .....	56
10	Fats and oils .....	16	49-51	Income and expenditure series	
11	Fresh fruits .....	17	49	Disposable personal income ...	57
12	Canned fruits .....	18	50	Personal consumption expenditures .....	58
13	Canned fruit juices .....	19	51	Food expenditures .....	59
14	Frozen fruits .....	20	52	Consumer price index .....	60
15	Dried fruits .....	21	53	Population of the United States, total and civilian .....	61
16	Fruits, farm weight equivalent ..	22	54-102	Supply and distribution tables	
17	Fresh vegetables, commercial ..	23-24	54	Meat .....	62-67
18	Canned vegetables .....	25	55	Edible offals .....	68
19	Canned soups and baby foods ..	26	56	Fish .....	*
20	Frozen vegetables .....	27	57-58	Poultry .....	69-70
21	Vegetables, farm weight equivalent .....	28	59	Eggs .....	71
22	Potatoes, sweetpotatoes, dry beans and peas .....	29	60-68	Dairy products .....	72-80
23	Cereal products .....	30	68-73	Fats and oils .....	80-85
24	Sugar, sirups, and beverages ..	31	74-78	Fruits .....	86-93
25	Tree nuts and peanuts .....	32	79-83	Vegetables, baby foods, soups .....	94-99
26	Spices .....	33	84-85	Potatoes and sweetpotatoes .....	100-101
27	Conversion factors, primary distribution to retail weight ..	34	86-87	Dry beans and dry peas .....	102-103
28-37	Per capita consumption, approximate retail weight		88-94	Grains and wheat flour .....	104-110
28	Meat and game .....	35	95	Sugar .....	111
29	Fish .....	36	96	Coffee .....	112
30	Poultry and eggs .....	37	97	Tea .....	113
31	Dairy products .....	38	98	Cocoa beans .....	114
32	Fats and oils .....	39	99	Tree nuts .....	115
33	Fresh fruit .....	40	100	Peanuts .....	116
34	Fresh vegetables, commercial ..	41	101-102	Spices .....	117-119
35	Potatoes, sweetpotatoes, dry beans and peas, soya .....	42			
36	Vegetables, potatoes and sweetpotatoes, dry beans and peas from home gardens .....	43			
37	Sugars, sirups, and beverages ..	44

Supplement for 1961 to

CONSUMPTION OF FOOD IN THE UNITED STATES, 1909-52

Agriculture Handbook No. 62

Issued September 1962

Washington, D. C.

INTRODUCTION

This supplement contains a set of revised tables matching those published in the original handbook. The revised tables supersede those contained in the handbook and in all previous Supplements. Tables in this Supplement carry the same numbers as those in the original handbook.

Rewvisions result from (1) addition of data for recent years, (2) incorporation of data developed from reports of the 1954 and 1958 Census of Manufactures and the 1954 and, unless otherwise indicated, the 1959 Census of Agriculture. Per capita data have been, since 1957, derived by using unadjusted population data of the Bureau of Census.

Census data are the benchmarks against which intercensal estimates of production, stock levels, and disposition of agricultural products and foods are checked. Census of Agriculture changes only recently were incorporated in all supply and distribution data for individual commodities and foods. However, as indicated in the tables, revisions for intercensal years have not yet been made for many of the overall measures (marketing and home consumption, tables 4-7; food consumption, tables 39-42; nutrients, tables 44-47). Revision of these is underway.

The Fish and Wildlife Service of the U. S. Department of the Interior, which recently assumed responsibility for preparation of fish data in this handbook, is now in process of reviewing the consumption data and procedures. Therefore, supply and distribution data for fishery products (table 56) are omitted from this Supplement. Estimates of per capita consumption, shown in tables 8 and 29, are not expected to be greatly affected by the changes in procedure thus far indicated.

The indexes of supply-utilization of all farm commodities, in tables 1 and 2, replace those for farm food commodities and present data in terms of net supplies rather than the previous gross concept. These indexes are completely revised for Census changes, reweighted using 1957-59 prices beginning 1955, and rebased to the 1957-59 period.

Data for Alaska and Hawaii cannot be incorporated in the statistics on food supplies and utilization until adequate information on food production and stocks in these States becomes available. Therefore, except for tables relating to consumer incomes and expenditures, data in this bulletin continue to pertain to the 48 States.

The text of Agriculture Handbook No. 62 (now out of print), describing and appraising the sources and methods used in developing the estimates of food consumption, is somewhat out of date. For most purposes, however, footnotes in the tables and the changes in presentation of data will suffice to inform of changes in methodology, sources of data, and the new material that has been developed. Plans are underway for revising the original handbook to update the technical description and introduce some new subject matter.

- 
- : A brief, nontechnical description of each of the consumption :  
: series is presented in Agriculture Handbook No. 118, Volume 5, :  
: Consumption and Utilization of Agricultural Products. Single copies :

1960	90.5	11.6	-2.1	100.0	74.4	1.2	10.6	13.8	
1961 8/	87.9	12.1	1/	100.0	74.5	1.4	10.4	13.7	

1/ The term "net" in this table means exclusive of feed and seed. Developed from quantitative data on supplies and use of processed and unprocessed farm commodities valued in terms of farm prices (1947-49 prices, 1924 to 1954; 1957-59 prices beginning 1955). Values of processed products were adjusted to values in terms of farm prices. For description of basic procedure, see Agricultural Handbook No. 91, Measuring the Supply and Utilization of Farm Commodities. 2/ Excludes seed and feed used in the year other than that imported. 3/ Excludes imports for seed and feed use. 4/ Includes farm and commercial stocks and holdings under Government programs. Negatives indicate increases in stocks from beginning to end of year; positives signify withdrawals from stocks. 5/ Includes civilian feeding in areas occupied by our Armed Forces. 6/ Excludes feed and seed; includes some waste and loss at farm level. 7/ Less than 0.05 percent. 8/ Preliminary

Table 2.--Supply-utilization of farm commodities: Percentage of net 1957-59 utilization, 1924-61 1/

1/ Gross utilization includes feed and seed used in further agricultural production. Domestic use (food and nonfood) and exports are valued at farm prices (1947-49 prices prior to 1955; 1957-59 prices beginning 1955) except that imported commodities not produced in this country are priced approximately at the port of entry.

2/ Preliminary.

3/ Less than 0.05 percent.

	:						

1/ Less than 0.005 percent.

2/ Less than 0.05 percent.

3/ Includes some quantities for processing.

4/ Fresh basis.

5/ Flax fiber, hemp fiber, hemp seed, and vegetables grown under glass.

6/ Imputed price derived by dividing value of sales and consumption by the quantity. Home consumption of meat animals is valued at a price 30 percent higher than the live-weight price.

7/ Bees, horses, and mules.

1/ Civilian consumption only, beginning 1941. 2/ Approximately at wholesale level of distribution.

3/ Equivalent eviscerated weight basis. Although most of the poultry was sold in dressed form until the 1940's, most is now sold ready to cook. The entire series was put on the latter basis to achieve comparability.

4/ Measured approximately at wholesale level of distribution. Average weight of eggs 1909-46 is assumed to be 1.5 pounds per dozen; conversion factor subsequently increased 0.01 pound each year through 1952, remained at 1.56 through 1956, thereafter 1.57. This change in factor allowed for the increasing size of eggs marketed. 5/ Not available. (See table 29 for approximations of fish consumption, table 30 for turkey.) 6/ Preliminary.

1/ Civilian consumption only, beginning 1941. 2/ Whole milk equivalent on a fat-solids basis. 3/ Includes cream in terms of whole milk equivalent. Farm weight for farm consumption, distribution weight for nonfarm. 4/ Whole and part whole milk cheese; excludes full skim, cottage, pot, and bakers'. 5/ Case and bulk goods, unskimmed only. 6/ Not available. 7/ Less than 0.05 pound. 8/ Preliminary.

1/ Civilian consumption beginning 1941. Calendar-year basis except for citrus juices which are on a pack-year basis beginning in November of year prior to that indicated, and grape juice which in the years 1909-33 and 1948 to date begins November prior to year indicated.

2/ Chilled fruit juice is produced commercially from fresh fruit in Florida; does not include reconstituted frozen juice or fresh juice produced for local sale.

3/ Single-strength equivalent.

4/ Not available.

5/ Preliminary.

<sup>1/</sup> Excludes quantities consumed as baby food. Farm-weight equivalent derived using constant conversion factors for individual fruits except juices, for which factors have been adjusted since 1948 to allow for increased yield. Unless otherwise noted, data represent a calendar year (adjustments to a calendar year, when necessary, were made by combining proportional parts of each pack year involved). Civilian consumption only; beginning 1941, crop year beginning October or November prior to year indicated. <sup>2/</sup> Beginning 1934 includes only apples grown in commercial areas. <sup>3/</sup> Beginning 1934 includes chilled citrus. <sup>4/</sup> Less than 0.05 pound. <sup>5/</sup> Includes chilled citrus. <sup>6/</sup> Preliminary.

<sup>1/</sup> Excludes quantities produced in home gardens. Minor vegetables on basis of carlot shipment data estimated to be 43 percent "leafy, green and yellow" 1919-49, then increasing each year to 55 percent in 1955; subsequently minor distributed each year on basis of production of known items.<sup>2/</sup> Close trim basis since 1954; slight basis in prior years. <sup>3/</sup> Includes 0.1 pound of shallots each year 1929 through 1958; since 1958 less than 0.05 pound. In earlier years shallots are included in minor vegetables. <sup>4/</sup> Included in minor vegetables. <sup>5/</sup> Less than 0.05 pound.

6/ Preliminary.

- 25 -

1/ Excludes soups and baby food. In years 1909-42 calendar-year data are derived from pack-year data by combining proportional parts of each pack year involved. Civilian consumption, beginning 1941. 2/ Minor vegetables and, in earlier years, items not shown separately are included in "other." 3/ Based on combination vegetable juices 13 percent, and other vegetable juices 2 percent. Combination vegetable juice approximately 85 percent or more tomato juice. 4/ Computed as a residual; includes miscellaneous greens, mixed vegetables, potatoes, pimientos, and all items, especially in earlier years, for which no separate data are available. 5/ Preliminary.

1/ Civilian consumption beginning 1941.

2/ In current years tomato soup constitutes about 20 percent of the total. In years 1909-34 based on production data from Census of Manufactures, with interpolations for years not reported; beginning 1947 rough approximations only.

3/ For consumption per child under 3 years, see table 81. Data not available after 1956. Approximated 1957 to date on basis of production information obtained in 1958 Census of Manufactures.

4/ In current years meat constitutes approximately 80 percent of this item, custards and puddings 20 percent.

5/ Preliminary.

1/ Civilian consumption only, beginning 1941.

2/ Included with leafy, green, and yellow because most items included are considered to be greens.

3/ Computed from unrounded data.

4/ Less than 0.005 pound.

5/ Included with "other."

6/ Preliminary.

1/ Excludes quantities from home-garden production (table 36). Civilian consumption only, beginning 1941. 2/ See table 17 for items covered. 3/ Excludes quantities used for soups and baby food; see table 18 for product weight of the items covered. 4/ See table 20 for product weight of the items covered. 5/ Includes processed sweetpotatoes other than canned and frozen (i.e., quantities dehydrated, used for chips and shoestrings, in mixtures and flour). 6/ Preliminary.

7/ Excludes quantities used for soups and baby food; see table 18 for product weight of the items covered.

1/ Civilian consumption only, beginning 1941.

2/ Farm weight basis, calendar years. Includes farm garden produce but not nonfarm. Excludes canned and frozen potatoes; includes farm weight equivalent of potatoes used in mixtures, flour, dehydration, chips, and shoestring potatoes. These uses for the past 3 years amounted to about 15 to 18 percent of the totals shown.

3/ Excludes canned sweetpotatoes.

4/ Cleaned basis, calendar years.

5/ Cleaned basis, crop years beginning approximately September of year indicated.

6/ Basic data inadequate.

7/ Preliminary.

1/ Consumption of most items is measured at the processing level. Excludes quantities used in alcoholic beverages.  
 Civilian consumption only, beginning 1941. Data in parentheses are approximations. 2/ Semolina and durum flour in products such as macaroni, spaghetti, and noodles. 3/ Estimated on basis of data in Census of Manufactures plus an allowance for grind for farm home use. 4/ Milled basis. Rice consumption for year beginning August previous to year stated. Includes some table rice used by brewers prior to August 1934. 5/ See table 24 for data on corn sugar and corn sirup. 6/ Based on census data. In recent years approximately 50 percent of cornmeal was degenerated. 7/ Principally oatmeal but includes an allowance for ready-to-eat oat cereals and infant foods in recent years. 8/ Barley food products expressed in terms of malt equivalent. Includes malt, pearl barley, and barley meal (in 1909-19). 9/ Preliminary.

1/ Consumption of sugars and sirups, other than cane and beet sugar in period 1941–46, is derived from production, foreign trade data and stock change if available; military takings have not been subtracted from total supply, so per capita estimates are for the total population. For coffee, tea, and cocoa beginning 1941, and cane and beet sugar in 1941–46, data represent civilian consumption only. Data in parentheses are approximations. 2/ Refined, measured at approximately wholesale level of distribution. 3/ Includes sirup equivalent of maple sugar. 4/ Green bean equivalent. 5/ Includes cocoa bean equivalent of cocoa products imported 1942 to date. 6/ Not available. 7/ Less than 0.05 pound. 8/ Includes a large, but indeterminate, proportion of liquid sugar. 9/ Preliminary.

1/ Crop year beginning July of year indicated for tree nuts; peanuts on September-August year.  
 Civilian per capita consumption of peanuts beginning 1941 and of tree nuts in period 1942-46. 2/ Includes the following nuts: Brazil, pignolia, pistache, chestnuts, cashews, and miscellaneous tree nuts.  
 3/ Based on imports beginning July 1 of year indicated. 4/ Less than 0.005 pound. 5/ Preliminary.

			:: Frozen vegetables	Packer		1.00
			:: Potatoes	Farm		.93
			:: Sweetpotatoes	do.		.86
			:: Grain products	Milling, processing		1.0

<sup>1/</sup> These factors were based on information from many sources, including special surveys and trade data. Many are approximations, but they are the best available at this time. During the war such factors were assembled, reviewed, and published in Conversion Factors and Weights and Measures for Agricultural Commodities and their Products, Production and Marketing Administration, May 1952. 96 pp.

<sup>2/</sup> Stage in production and processing at which consumption of particular commodity is measured, as described in chapters 1 and 2.

<sup>3/</sup> Factors for obtaining ready-to-cook weight from live weight: Turkey--prior to 1956, 75 percent; 1956 and 1957, 76 percent; thereafter increased 1 percent each year to 80 percent in 1961. Chicken--prior to 1947, 68 percent, thereafter increased gradually to 72 percent in 1958 and continued at that level.

<sup>4/</sup> Factor of 0.96 used 1942-46 to cover additional loss resulting from shortage of wooden cases during the war period.

<sup>5/</sup> This category includes fats and oils in cooking and salad oils, in salad dressings, mayonnaise, in bakery products, and for minor uses such as fish canning. To avoid duplication with other foods, no attempt was made to put data on actual weight basis.

<sup>6/</sup> Roasted.

<sup>7/</sup> Chocolate liquor equivalent of cocoa and chocolate (54 percent fat content).

<sup>8/</sup> Average factor often used for all fresh vegetables, excluding potatoes and sweetpotatoes but including cantaloups, watermelons, and onions.

1/ Civilian consumption beginning 1941. 2/ All meat consumed per capita, including processed, in terms of fresh retail cuts. Carcass weight (at wholesale) converted to retail equivalents using the following average factors: Beef, 79 percent; veal, 91 percent; lamb and mutton, 89 percent; lean pork, 65 percent of carcass weight of pork; fat pork (bacon and salt side), 28 percent of carcass weight of pork. 3/ Approximations only. Includes game birds and mammals and commercially raised rabbits; excludes game fish. For purposes of nutritional analysis it is assumed that about 1.2 pounds of game fish were consumed each year per person. 4/ Net canned weight; federally inspected only; excludes soups. Note: Consumption of canned meat is included in the data for meats on a "fresh retail cut" equivalent elsewhere in this table.

5/ Preliminary.

1/ Civilian only, beginning 1942.

2/ Fresh and frozen fish consumption in the period 1909-28 are based on a straight-line projection, adjusted.

3/ Canned fish consumption estimates 1910-20 based on straight-line projection, adjusted for heavy export and military takings of canned fish from 1915-18; beginning in 1921 based on production reports, packer stocks, and foreign trade statistics for individual years.

4/ Cured fish estimates 1909-28 based on straight-line projection, unadjusted.

5/ Data for 1909 assumed to be same as 1908 which were estimated on basis of the 1908 Census and Department of Commerce foreign trade data.

6/ Less than 0.05 pound.

7/ Preliminary.

1961 8/	7/	30.3	7/	7.5	(.4)		

1/ Civilian consumption only, 1941 to date. 2/ Excluding only blood and feathers. Usual form of marketing until after World War II. 3/ Ready-to-cook including giblets. Chicken: 1909-46 estimated from dressed weight data using factor of 75 percent (equivalent to 68 percent of live weight); 1947 to date computed from live-weight basis, using factors gradually increased to 72 percent in 1958 and thereafter. Turkey calculated at 82.4 percent of dressed weight (or 75 percent of live weight) through 1955; after. Turkey calculated at 82.4 percent of dressed weight (or 75 percent of live weight) through 1955; 76 percent of live weight in 1956 and 1957; thereafter increased 1 percent each year to 80 percent in 1961. 4/ Based on straight-line projection 1909-28, with rough estimate for 1909. 5/ Rough approximations only. 6/ Loss to retail 3 percent, 1909-41 and 1947 to date; 4-percent loss, 1942-46. See table 8 for information on adjustment made for changing size of eggs. 7/ Series discontinued in 1953. 8/ Preliminary.

2/ Excludes duplication (meltoline excluded; nonfat dry milk used in dairy products except ice cream excluded; duplication of butter, condensed milk and (whole milk equivalent) consumed in 1909-41; this proportion was varied, largely on basis of information obtained for markets having Federal milk marketing orders. Beginning in 1950 a primary source of information from Government regulation replaced fluid milk markets. <sup>3/</sup> On basis of 25 percent fat content 1909-42; 20 percent in 1943 and 1944; 22 percent in 1945 and 1946; 23 percent in 1947 and 1948; 24 percent in 1949 and 1950. <sup>4/</sup> Includes natural and cultured buttermilk and all fluid skin items, including quantities used in flavored drinks. <sup>5/</sup> Whole cream, 11 percent milk. Includes milk used in ice cream mix beginning 1945 and in sherbet, ice milk, and miscellaneous minor frozen products beginning 1949. <sup>6/</sup> On basis of net milk used in making ice cream estimated to be in form table 9. <sup>2/</sup> On basis of 34 percent fat content 1909-42 to date; 30 percent in 1943 and 1946, and 32 percent in 1947. <sup>10/</sup> Includes duplication of quantities used in dairy products other than ice cream. Duplication in ice cream avoided by use of "net milk" series in deriving the dairy component of ice cream. <sup>11/</sup> Civilian consumption only, 1911 to 1941. <sup>12/</sup> Excludes duplication of "net milk" series in deriving the dairy component of ice cream shown in this table. <sup>3/</sup> Cream was estimated as 20 percent of total fluid milk and cream detailed procedure for estimating farm and nonfarm consumption separately. <sup>4/</sup> Includes natural and cultured buttermilk. <sup>5/</sup> Includes natural and cultured buttermilk and all fluid skin items, including quantities used in flavored drinks. <sup>6/</sup> Whole cream, 11 percent milk. <sup>7/</sup> Excludes duplication of quantities used in dairy products other than ice cream. Duplication in ice cream avoided by use of "net milk" series in deriving the dairy component of ice cream. <sup>8/</sup> On basis of 0.05 pound. <sup>12/</sup> Preliminary.

1961 6/	97.6	4.8	8.0	.3	5/

1/ Civilian consumption only, beginning 1941. Calendar-year basis except for dry field peas for which year begins in September of year indicated. Data for potatoes and sweetpotatoes include farm garden production but exclude nonfarm garden output. Data for dry beans and peas exclude all home-garden produce. Data in parentheses are rough approximations only.

2/ Retail weight estimated at 93 percent of primary distribution (or farm) weight.

3/ Retail weight estimated at 86 percent of primary distribution (or farm) weight.

4/ Cleaned basis.

5/ Data no longer reported.

6/ Preliminary.

1/ Civilian consumption beginning 1941.

2/ Includes sugar consumed in the form of processed products. Civilian consumption 1941-46 only.

3/ Approximate quantities of sugar used in production of canned and frozen fruit, canned fruit juices, canned vegetables, unskimmed sweetened condensed milk, and frozen dairy products except ice cream. In the nutritional analysis of the food supply these quantities were deducted to avoid duplication. Information on ice cream was supplied to nutritionists in terms of net milk and cream content only.

4/ Equivalent to 84 percent of green beans.

5/ Chocolate liquor (54 percent fat content) used in products, equivalent to 73.7 percent of cocoa beans.

6/ Preliminary.

Table 38.—Approximate consumption of food per capita, retail-weight equivalent by major food groups; total in pounds and in comparison with 1947-49 average, 1909-61 1/

1/ Foods measured approximately at the retail store level of distribution. Footnotes contain references to data showing form in which specific items are counted. Ingredients of mixed foods are included in their respective food groups (e.g., data for eggs include eggs used in bakery products, flour mixes, and all other processed food items). Civilian consumption only, beginning 1941. 2/ Based on calcium content of items in table 31. One quart of fluid milk weighs 2.15 pounds. 3/ Data from table 31. 4/ Data from table 30. Allows for breakage from farm to retail and increasing size of eggs in recent years. 5/ Data from tables 28, 29, and 30. Excludes fat pork cuts; includes game fish; poultry on eviscerated basis. 6/ Data from table 32. Product weight except for "other edible fats and oils," which represents oils used in salad dressings etc. 7/ Data from tables 25, 35, and 36. 8/ Data from tables 18, 35, and 36. 9/ Data from tables 12, 13, 14, 18, 19, 33, 34, and 36. Product weight except for concentrated citrus juices, which are on a single-strength basis. Soup estimated to be approximately one-third tomato through 1945; thereafter, percentage tomato reduced gradually to 20 percent in current years. 10/ Data from tables 18, 19, 20, 34, and 36. For purposes of nutritional analysis vegetable baby foods are assumed to be "leafy, green, and yellow." 11/ Data from tables 12, 13, 14, 15, 18, 19, 20, 33, 34, and 36. Includes soups other than tomato - see footnote 9. 12/ Excludes corn sugar and sirup. Data from table 23. 13/ Excludes sugar used in production of canned and frozen fruit, canned fruit juices, canned vegetables, unskimmed sweetened condensed milk, and frozen dairy products except ice cream (see table 37). Sugars based on data in table 37; for sirups (which include molasses and honey) see table 24. 14/ Data from table 37. Includes coffee on roasted basis and chocolate liquor equivalent of cocoa and chocolate products. 15/ Preliminary.

Table 39.- Index of per capita food consumption (price-weighted basis), 1909-61 1/  
(1947-49 = 100)

Year	Meat, fish, and poultry (includ- ing fat pork cuts)	Dairy products	Fats and oils (excluding fat pork cuts)		Fruits

All foods in index				323.5531	100.0			

1/ Value aggregates derived by multiplying the 1947-49 average quantities for individual foods by the retail prices. For actual computations of the index, the value aggregates for the 3 years of the base period were averaged and used to achieve arithmetic accuracy. The differences are negligible for most purposes.

2/ BLS indicates average of retail prices reported by the Bureau of Labor Statistics. AMS indicates BLS average prices adjusted by the Agricultural Marketing Service (formerly Bureau of Agricultural Economics) to include all grades of food items and to allow for sales in rural as well as urban areas. IHE indicates prices derived by AMS from the 1948 urban survey conducted by Institute of Home Economics (formerly the Bureau of Human Nutrition and Home Economics). Other - see text.

3/ Excludes quantities used in other dairy products.

4/ Less than 0.05 percent.

5/ Price applies only to base period. See table 41 for prices for other years and text for description of methodology used.

6/ Excludes sugar used in frozen and canned fruits and juices, canned vegetables, condensed milk, and ice cream.

Table 42.- Relative importance of major food groups in the index of per capita food consumption in selected years

1/ Quantities of nutrients computed by Agricultural Research Service, Consumer and Food Economics Research Division, on the basis of estimates of apparent per capita consumption (retail basis), including estimates of produce of rural and urban home gardens, prepared by the Economic Research Service. No deduction has been made in nutrient estimates for loss or waste of food in the home or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date.

2/ Beginning 1941, data for iron, thiamine, riboflavin, and niacin include estimates of the quantities of these nutrients added to prepared cereals, white flour, and bread.

3/ Incorporates changes based on the 1959 Census of Agriculture. Data for 1961 are preliminary.

1/ Retail-cost estimates represent cost at retail food store prices of all domestic farm foods that were both sold by farmers and bought by civilian consumers in this country. Farm food products sold in the form of meals are included but are valued at what the food would have cost in retail stores. Farm value is adjusted to eliminate imputed value of nonfood byproducts. The farm-retail marketing bill is the difference between the farm value and retail cost except for the years 1933-35 and 1943-46 in which the marketing bill for some groups is adjusted for processor taxes or Government payments to processors.

2/ Includes vegetable-oil products, sugar, and other food products in addition to the five commodity groups given in this table.

3/ The estimated farm values of milk, eggs, fruits, lard, and vegetable shortening used in bakery products were deducted from the farm values of other commodity groups and added to the farm value of the bakery and cereal products group.

4/ Preliminary estimates.

Table 49.--Disposable personal income, total and per capita, 1909-61 1/

Year	Total income			Per capita income			Total population	Consumer price index
	Actual	Index (1947-49 =100)	Index divided by consumer price index (\$183,022 =100) million)	Actual	Index (1947-49 =100)	Index divided by consumer price index (\$1,248 =100)		
	2/			Actual	Index (1947-49 =100)	Index divided by consumer price index (\$1,248 =100)		
				Actual	Index (1947-49 =100)	Index divided by consumer price index (\$1,248 =100)

1/ See text for definitions.

2/ Estimates for 1909-28 by the Economic Research Service, for 1929 to date by the Department of Commerce.

3/ Bureau of Census data. Includes Armed Forces overseas.

4/ Estimates for 1909-12 by the Economic Research Service, for 1913 to date by the Bureau of Labor Statistics.

5/ Preliminary.

Note: Data for 1960 and 1961 include Alaska and Hawaii. However, this does not significantly affect comparison with prior years. (See explanation in July 1961 issue of Survey of Current Business, page 5.) Therefore, no attempt was made to adjust the indexes for this change.

1/ See text for definitions.

2/ Estimates for 1909–28 by the Economic Research Service, for 1929 to date by the Department of Commerce.

3/ Bureau of Census data. Includes Armed Forces overseas.

4/ Estimates for 1909–12 by the Economic Research Service, for 1913 to date by the Bureau of Labor Statistics.

5/ Preliminary.

Note: Data for 1960 and 1961 include Alaska and Hawaii. However, this does not significantly affect comparison with prior years. (See explanation in July 1961 issue of *Survey of Current Business*, page 5.) Therefore, no attempt was made to adjust the indexes for this change.

Table 51.—Food expenditures, total and per capita, 1929–61 1/

1/ Compiled from reports of the Bureau of Labor Statistics. 2/ Represents all goods and services. 3/ Figures for 1913-34 based on indexes prepared but not published by the Bureau of Labor Statistics; represents goods and services other than food. 4/ Includes butter. 5/ Excludes butter. 6/ Includes potatoes. 7/ Excludes alcoholic beverages. 8/ In addition to categories shown separately, includes frozen fruits and vegetables. 9/ All foods consumed at home. See Bureau of Labor Statistics Bulletin No. 1183, *Retail Prices of Food, 1953-54*, p. 30, for discussion of the introduction of pricing of food away from home.

1937	128.5	128.8						
1938	129.4	129.8						
1939	130.4	130.9						

1/ Estimates of the Bureau of the Census, not adjusted for underenumeration. In computing per capita food consumption, the population for the date closer to the midpoint of the year concerned was used (e.g., for consumption data on a calendar-year basis, July 1 population was used). Beginning 1941, data on military takings for most commodities were deducted from total domestic consumption and per capita figures were computed using the series for population eating out of civilian supplies; data on military takings prior to 1941 were not available.

2/ Estimates computed from data supplied by several Federal agencies. For the period January 1, 1941, through January 1, 1946, an adjustment was made to allow for members of the Armed Forces eating out of civilian supplies; these adjustments were originally estimated by OPA on the basis of data from several official sources.

:	Until such time as information on supply and distribution of food in Alaska	:
:	and Hawaii are incorporated in the U. S. statistics, population for the	:
:	48 States will be used to derive per capita figures. Thus far, only the	:
:	Department of Commerce information on expenditures and income includes data	:
:	for Alaska and Hawaii (in 1960 and 1961).	:

Table 54.--Meat: Supply and distribution, 1909-61 1/ -Continued  
(Carcass weight equivalent)

1/ Includes products converted to carcass weight equivalent. Edible offals are not part of carcass and are therefore not included.

2/ Includes following slaughter under Emergency Drought Program: Beef, 1,279 million pounds in 1934, 60 million in 1935, and 1 million in 1936; veal, 181 million pounds in 1934, 6 million in 1935; lamb and mutton, 51 million in 1934. Pork includes 100 million pounds slaughtered under sow and pig purchase program and 53 million pounds under supplemental hog purchase program in 1933 and 159 million in 1934. Total meat produced under Government emergency programs: 1933, 153 million pounds; 1934, 1,669 million pounds; 1935, 65 million pounds; 1936, 1 million pounds. Prior to 1940 data include federally inspected meat production in Hawaii and the Virgin Islands.

3/ Cold-storage holdings in public warehouses and packing plants, minus Government holdings during 1941-47. Product weight as reported by SRS assumed to be equivalent to carcass weight.

4/ For all meats except beef, general imports prior to 1933 and imports for consumption 1934 and thereafter. Beef, imports for consumption 1909 to date.

5/ Beginning 1941 excludes military shipments and all USDA shipments for lend-lease, UNRRA and other claimants. Exports and shipments of veal are not reported separately; beginning 1941 estimates obtained as a constant percentage of total beef and veal.

6/ Deliveries for lend-lease, UNRRA, and other foreign supply programs.

7/ Net quantities of meat drawn by USDA from domestic channels for consumption 1933-36, for export beginning 1941. USDA transactions 1934-36 show accumulation of stocks in first years of Emergency Drought Program for consumption in later years.

8/ Total military takings, including those for civilian feeding in occupied areas. Exclude Army transfers of meat to UNRRA, adjusted to year procured. Estimates of military takings are not available for World War I or for any other year prior to 1941.

9/ Beginning 1941, per capita consumption of civilian population only.

10/ Less than 500,000 pounds.

11/ Includes 114 million pounds of beef procured by Army in 1945 and transferred to USDA and UNRRA in 1946.

12/ Includes beef transferred by military agencies to UNRRA: 1945, 187 million pounds; 1946, 73 million pounds.

13/ In 1953 and 1954 respectively, includes 2 and 6 million pounds (carcass weight equivalent) of canned beef and gravy procured by USDA and shipped abroad by CARE. In 1954, includes 3 million pounds (carcass weight) of canned beef and gravy transferred from Section 32 for shipment to Germany.

14/ Preliminary.

15/ Includes 55 million pounds of pork procured by Army in 1945 and transferred to USDA and UNRRA in 1946.

16/ Includes pork transferred by military agencies to UNRRA: 1945, 118 million pounds; 1946, 35 million pounds.

17/ Includes beef and pork transferred by military agencies to UNRRA. See footnotes 12/ and 16/.

1/ Production of offals based on percentage of carcass-weight meat production: Beef 6.7 percent, veal 10.7, lamb and mutton 5.1, and pork excluding lard 6.7 percent. 2/ Trimmings included prior to 1944; excluded beginning that date. 3/ Comparable data not available prior to 1934. Exports only beginning 1951. 4/ Civilian per capita only, beginning 1941. 5/ Less than 500,000 pounds. 6/ Excludes an estimated allowance of 40 million pounds for trimmings, which were reported in stocks prior to July 1, 1944. 7/ Includes small quantities of sausage ingredients reported in Bureau of Census classification "other meats except canned (including edible animal organs)." 8/ No longer reported. Assumed no change in stocks during 1957. 9/ Preliminary.

1/ The estimated total output of chicken in the United States is based on the estimated quantity consumed on farms and the quantity sold from farms, with an addition to these two items to allow for nonfarm production. Total output beginning 1934 also includes the estimated production of commercial broilers. 2/ Prior to 1933 stocks include all poultry other than turkey; beginning 1933 ducks have been reported separately and are also excluded. Data in terms of reported product weights. 3/ Includes exports of turkey through 1957. Data in terms of reported product weights. 4/ Civilian per capita consumption beginning 1941. 5/ Excluding only blood and feathers. Series now discontinued. 6/ Includes giblets. Per capita series 1909-46 estimated from dressed weight data using ratio of 75 percent (equivalent to 68 percent of live weight). Beginning 1947 data on supply and distribution computed from live-weight using factors increasing gradually from 68 to 72 percent in 1958 and thereafter. 7/ Includes 57 million pounds (14 million pounds canned) transferred to UNRRA in 1946. 8/ Adjusted for transfer of 57 million pounds of Army stocks to UNRRA. 2/ Preliminary.

1/ The annual output of turkeys includes the quantity sold from farms and the quantity consumed on farms.

2/ Stock data in terms of product weights as reported, 3/ Separate data on exports of turkey first reported in 1958; previously included with chicken. 4/ Data take into account changes in USDA stocks. 5/ Civilian consumption only, beginning 1941. 6/ Excluding only blood and feathers. Series now discontinued. 7/ Includes giblets. Calculated as 75 percent of live-weight (or 82.4 percent of dressed weight) through 1955; 76 percent of live-weight in 1956 and 1957; thereafter increasing 1 percent each year to 80 percent in 1961. Per capita series on ready-to-cook basis calculated directly from dressed-weight data, 1929-46; but directly from supply and distribution data, 1947 to date. 8/ Preliminary.

1/ Total production of eggs consists of the estimated farm output plus an allowance for nonfarm egg production.

2/ Data on storage stocks include only holdings of shell and frozen eggs through 1942 and 1959 to date. Includes dried egg stocks from December 31, 1943 through 1958. 3/ Import data consist of shell eggs and the approximate shell-egg equivalent of dried and frozen eggs. 4/ Export data include shell eggs only prior to 1941, but the quantities in other forms not reported were small. 5/ Through 1940 estimates of eggs used for hatching based on number of chickens raised; thereafter based on volume of commercial hatchery output plus allowance for farm hatched eggs. As a nonfood item, the following storage losses have been included: 16 million dozen in 1944, 2 in 1945, 4 in 1948, 2 in 1949 and 1 in 1950. 6/ Civilian per capita only, beginning 1941. 7/ Includes quantities transferred from USDA stocks for civilian feeding: 1948, 21 million pounds dried (63 million dozen); 1949, 703,000 pounds dried (2 million dozen). 8/ Preliminary.

<sup>1/</sup> Includes all types of cheese, except full-skim American and cottage, pot, and bakers' cheese. Data for 1909 as reported by Census of Manufactures; for 1910-17 estimates of total production were derived by interpolation on the basis of market receipts.

Data for factory production, 1918 to date, are published by the Crop Reporting Board, United States Department of Agriculture, (1909-25 include estimates of cheese made on farms.)

<sup>2/</sup> Stock data cover quantities in commercial storage warehouses, reported beginning 1916 in Cold Storage Report, Crop Reporting Board.

<sup>3/</sup> Data on imports, exports, and shipments are those published by the Department of Commerce, except for the period during World War II when this information was supplemented and partially replaced by data from United States Department of Agriculture records. Import data prior to 1934 are "general imports" while for 1934 and following years they are "imports for consumption".

<sup>4/</sup> Government stocks as reported in Cold Storage Report beginning December 31, 1950.

<sup>5/</sup> Includes donations, beginning 1950.

<sup>6/</sup> Includes any quantities used by military in civilian feeding programs abroad.

<sup>7/</sup> Cold-storage stocks of 131 million pounds include approximately 12 million pounds held by United States Department of Agriculture and military.

<sup>8/</sup> The total stocks of 20 million pounds include about 8 million pounds held outside commercial cold storage.

<sup>9/</sup> Cold-storage stocks of 176 million pounds include about 102 million pounds held by Department of Agriculture and military. USDA holdings outside of commercial cold storage estimated at 40 million pounds and commercial holdings at 5.5 million pounds.

<sup>10/</sup> Cold-storage total of 145 million pounds includes 75 million pounds held by United States Department of Agriculture and military. United States Department of Agriculture holdings outside commercial cold storage totaled approximately 11 million pounds and commercial holdings were about 5 million pounds.

<sup>11/</sup> Includes 23 million pounds transferred from military stocks.

<sup>12/</sup> Preliminary.

1/ Items covered: Evaporated milk, case goods, (unskimmed, unsweetened); condensed milk, case goods (unskimmed sweetened) and for earlier years also unsweetened; condensed milk, bulk goods, unskimmed sweetened and unsweetened. For years 1909-18, annual production estimates were interpolated on the basis of Census of Manufactures data for 1909 and 1914 and the estimate for 1919 by the former Bureau of Agricultural Economics. For the following years, the total output of these items was published by the Statistical Reporting Service in Production of Manufactured Dairy Products. (Processed.) 2/ Manufacturers' stocks compiled from Evaporated, Condensed, and Dry Milk Report of SRS (issued monthly, processed). They include stocks of condensed milk (case goods) and evaporated milk (case goods), both of which were first reported in 1920. Beginning 1949, cold storage holdings of bulk condensed whole milk, on basis of Cold Storage Report, SRS, are included. 3/ 1909-41, based on data reported by the Department of Commerce; 1942-46, from records of the Department of Agriculture and Department of Commerce; beginning 1947, as reported by the Department of Commerce. Beginning April 1948, trade with Hawaii and Alaska is no longer reported. 4/ Civilian per capita consumption only, beginning 1941. 5/ Less than 0.5 million pounds. 6/ Includes 347 million pounds transferred to USDA and 4 million pounds transferred to UNRRA from military stocks in 1946. 7/ Preliminary.

1/ 1910-17, approximated on basis of Census of Manufactures data for 1914 and the estimate for 1918 by the former Bureau of Agricultural Economics. Beginning 1918, as reported by the Crop Reporting Board, United States Department of Agriculture, in Production of Manufactured Dairy Products. 2/ Manufacturers' stocks as published by CRB in Evaporated, Condensed, and Dry Milk Report. 3/ Imports are "Imports for consumption", Department of Commerce. For the years 1920-31, the Department of Commerce reported a composite figure on exports of milk and cream, powdered or dried. For this period, exports of dry whole milk were assumed to be 57 percent of the reported composite, the portion which dried whole represented of the total of dried whole and dried skimmed milk in 1932-34. Likewise, shipments of dry whole milk for 1928-31 were assumed to be 39 percent of the combined shipments of dried whole and dried skimmed milk, the relationship which prevailed when the items were reported separately in 1932-34. Beginning 1932, exports are those published by the Department of Commerce except for the period during World War II when this information was supplemented and partially replaced by data from Department of Agriculture records. 4/ Includes any quantities used by military in civilian feeding programs abroad. 5/ Exports and change in stocks exceed production by 1 million pounds. 6/ Less than 500,000 pounds. 7/ Includes 35 million pounds transferred to USDA from military stocks. 8/ Preliminary.

1/ Production for food uses prior to 1935 based on proportion produced for food in 1936-40 applied to total output, as reported by the Crop Reporting Board, United States Department of Agriculture for 1920-34. Beginning 1935, data are as published by the Crop Reporting Board in Production of Manufactured Dairy Products. 2/ Manufacturers' stocks as reported by Crop Reporting Board in Evaporated, Condensed, and Dry Milk Report. 3/ Imports are "imports for consumption", Department of Commerce. For the years 1920-31 the Department of Commerce reported a composite figure on exports of milk and cream, powdered or dried. For this period, exports of dry skim milk were assumed to be 43 percent of the reported composite, the portion which dried skimmed represented of the total dried whole and dried skimmed milk in 1932-34. Likewise, shipments of dry skim milk for the period 1928-31 were assumed to be 61 percent of the combined shipments of dried whole and dried skimmed milk, the relationship which prevailed when the items were reported separately in 1932-34. Beginning 1932, exports are those published by the Department of Commerce, except for the period during World War II when this information was supplemented and partially replaced by data from Department of Agriculture records. 4/ Sold domestically by USDA. 5/ Includes quantities used in civilian feeding programs abroad. 6/ Less than 500,000 pounds. 7/ Includes 12 million pounds transferred to UNRRA and PMA from military stocks in 1946. 8/ Includes 5 million pounds purchased by Dairy Products Marketing Association during 1947 and transferred to PMA during 1948. 9/ Preliminary.

1/ The net amount of milk (equivalent) used in making ice cream and miscellaneous frozen products (milk fat basis) has been estimated annually beginning with 1916 by the Crop Reporting Board on the basis of total quantity of milk fat used in frozen dairy products and deducting approximate quantities supplied in the form of butter and condensed whole milk. (These quantities are included in the tables on butter and evaporated and condensed whole milk.) Approximate allowance for this duplication was made for the years prior to 1916 on basis of the magnitude of duplication in 1924-29 and the estimated quantity of ice cream produced 1909-15. 2/ Output 1909-15 approximated on basis of Census of manufactures for 1914 and revised Crop Reporting Board estimates for 1916-39; 1940 to date, as published by the Crop Reporting Board in Production of Manufactured Dairy Products. Production reported in gallons, converted to pounds assuming a gallon of ice cream weighed 4.7 pounds through 1939 and 4.8 pounds since 1952; slightly lower weights prevailed during the war and early postwar years. 3/ Preliminary.

1/ Milk equivalent of all dairy products calculated on a solid basis.  
2/ Includes any quantities used by military in making margarine.  
3/ Approximations to the per capita consumption levels for fluid milk and cream from 1909-23 are as follows:

1909	770 pounds	1912	763 pounds	1915	751 pounds	1918	725 pounds
1910	759 pounds	1913	754 pounds	1916	747 pounds	1919	733 pounds
1911	749 pounds	1914	747 pounds	1917	729 pounds	1920	736 pounds

4/ Production for 1920-55 is based on estimates of production only.

5/ Includes any quantities used by military in making margarine.

6/ Approximations to the per capita consumption levels for fluid milk and cream from 1909-23 are as follows:

1909	343 pounds	1912	355 pounds	1915	318 pounds	1918	361 pounds
1910	345 pounds	1913	342 pounds	1916	315 pounds	1919	335 pounds
1911	341 pounds	1914	321 pounds	1917	328 pounds	1920	348 pounds

7/ Preliminary.

8/ Cold-storage holdings of cream included beginning January 1, 1931; condensed milk (bulk) beginning January 1, 1949.

1/ Quantity produced (col. 1) and fed to calves (col. 7) determined by applying annual fat test to reported quantities of milk. Quantities in remaining columns except civilian disappearance were determined by applying percentage of milkfat in each product to the amount of product. Civilian disappearance computed from data on production, stocks, trade, military purchases, quantities fed to calves, and other uses. 2/ Includes any quantities used by military in civilian feeding programs abroad. 3/ Cold-storage holdings of cream included beginning January 1, 1931; condensed milk (bulk) beginning January 1, 1949. 4/ Less than 500,000 pounds. 5/ Preliminary.

Table 67.—Milk solids—not-fat: Supply and distribution, United States, 1924-61. 1/

J/ Production determined by applying percentage of solids-not-fat in whole milk to quantity of milk produced. Total consumption by civilians determined from percentage of solids-not-fat in individual dairy products consumed per capita and number of people. Quantities in remaining columns except "fed to animals or wasted" were determined by applying percentages of solids-not-fat in each product to amount of product. The quantity "fed to animals or wasted" is the difference between total supply and total distribution among consumption, exports, and ending stocks. 2/ Includes any quantities used by military in civilian feeding programs abroad. 3/ Nonfat dry milk included beginning January 1, 1931; cold-storage holdings of cream beginning January 1, 1930; cold-storage

Preliminary.

1/ 1909-16, estimates of total butter production were based on data of Census of Manufactures, Census of Agriculture and market receipts. 1917-38, annual estimates of factory production based on data from Census of Manufactures, State Departments of Agriculture, and from data received directly from creameries by the Crop Reporting Board, United States Department of Agriculture; 1939-date, data are as published by Crop Reporting Board in Production of Manufactured Dairy Products. Farm Butter production, 1917-23, estimated primarily from Census of Agriculture and from 1924-date from reports by farmers, in addition to Census data, and published by Crop Reporting Board. Data prior to 1909 available in U. S. Department of Agriculture Technical Bulletin No. 722, Production and Consumption of Manufactured Dairy Products. 2/ Stock data cover quantities in commercial storage warehouses, reported beginning 1916 in Cold Storage Reports, Crop Reporting Board. 3/ Imports, exports, and shipments are those published by the Department of Commerce, except for the period during World War II when this information was supplemented and partially replaced by data from Department of Agriculture records. Import data prior to 1918 are "general imports" while for 1918 and following years they are "imports for consumption". Shipments to Alaska and Hawaii excluded starting with April 1948. 4/ Government stocks as reported in Cold Storage Report beginning December 31, 1950. 5/ Includes donations beginning 1950; in 1954-60, also includes donations and deliveries of butter oil (in terms of butter). 6/ Use of butter in margarine prior to 1914 estimated; 1914-16 and beginning 1920 from Bureau of Internal Revenue; 1917-19 (fiscal year data), from Institute of Margarine Manufacturers. 7/ Less than 500,000 pounds. 8/ Cold-storage stocks of 25 million pounds include about 1 million pounds owned by Department of Agriculture and the Armed Forces. 9/ Total of 35 million pounds includes approximately 30 million pounds in cold storage and 5 million pounds outside cold storage. Cold-storage figure of 155 million pounds includes about 125 million pounds of Department of Agriculture and military stocks. 10/ Cold-storage total of 60.5 million pounds includes approximately 39.6 million pounds of Department of Agriculture and military stocks. 11/ Includes 3 million pounds in process of transfer as of January 1 from military holdings to civilian channels via Production and Marketing Administration. 12/ Includes butter equivalent of butter spread and butter oil. 13/ In process of transfer from the military as of January 1. 14/ Includes butter equivalent of butter oil. 15/ Preliminary.

<sup>1/</sup> This category includes fats and oils used in such products as cooking and salad oils, in salad dressing, mayonnaise, baked goods, and oil equivalent of cottonseed, peanut, soybean, corn, sunflower, tea seed, and edible olive; oleo oil, oleo stock, edible tallow, and oil equivalent of palm kernel, and batassai. During 1942, 1943, 1944, and 1945 also includes some linseed oil exported to Russia for food.

<sup>2/</sup> Includes some linseed oil exported to Russia for food during World War II. <sup>3/</sup> Civilian only, 1941 to date. <sup>4/</sup> Beginning 1942 includes stocks of sunflower and tea seed oils not reported separately in preceding years.

<sup>5/</sup> Beginning 1944 includes stocks of secondary or processed edible fats and oils not previously reported by the Bureau of the Census. <sup>6/</sup> Preliminary. <sup>12/</sup> Includes estimates of foreign donations not separately reported by the Bureau of the Census.

1/ Includes apples, applesauce, apricots, berries, cherries (including brined), cranberries, figs, fruit cocktail and salad, citrus segments, olives (including brined), peaches (including spiced), pears, pineapple, plums, and prunes.

2/ Data 1909-42 on pack year, production beginning from June to November depending on type of fruit; beginning 1943 on calendar-year basis. 3/ Packers' stocks: Major canned fruits 1921-34 and all items except olives 1934-47 as reported by Department of Commerce; all items except pineapple for 1948 to date from National Canners Association, Florida Canners Association, and Canners League of California. Wholesale distributors' stocks are included beginning 1948, as reported by Department of Commerce (beginning 1952 data are based on revised sample of firms). For each year beginning and ending stocks are comparable; differences between ending stocks in one year and beginning stocks in the next year arose from changes in coverage of available data. 4/ Beginning 1948 trade with Hawaii and Alaska no longer reported; receipts of pineapple from Hawaii are based on delivery data from the industry. 5/ Beginning 1941, data exclude shipments by United States Department of Agriculture for lend-lease, UNRRA, and other programs. Beginning 1948, shipments to Hawaii and Alaska are excluded. 6/ Includes quantities procured for military civilian feeding. 7/ Civilian per capita consumption only, 1941 to date. 8/ Includes purchases of canned pineapple by our Armed Forces outside the United States: 1943, 281 million pounds; 1944, 251; 1945, 108. 9/ Includes the following quantities procured by military agencies and subsequently transferred to nonmilitary agencies: 9 million pounds in 1944, 73 in 1945, and 19 in 1946.

10/ Includes quantities transferred from military agencies to UNRRA: 55 million pounds in 1945, 2 million in 1946. 11/ Preliminary. 12/ Produced commercially in Florida.

1/ Differences between ending stocks in 1933, 1935, 1938, 1946, 1947, 1958 and beginning stocks in the following year are due to change in coverage of available data. Beginning 1948 includes only wholesale distributor stocks of pineapple juice. Beginning 1953 wholesale distributors' stocks are based on a revised sample of firms selected from the 1948 Census of Business list. Beginning 1955 concentrated citrus juices adjusted to single-strength basis using revised factors. For each year beginning and ending stocks are comparable. 2/ Beginning 1948, receipts of pineapple from Hawaii are based on delivery data from the industry. Shipments to Hawaii and Alaska are excluded after March 1948. 3/ Civilian per capita consumption only, beginning 1941. 4/ 1910-28, grape juice only; data for citrus juices begin in 1929; data on other noncitrus juices (apple, berry, nectars, pineapple, and prune) begin in 1934. Grape juice data are on a pack year 1910-33 and 1948 to date, beginning November of year prior to that indicated; data on citrus juices are on a pack year beginning November prior to year indicated and include concentrated juices converted to a single-strength basis. 5/ Less than 0.5 million pounds. 6/ Includes 103 million pounds transferred from military stocks in 1946. 7/ Includes 86 million pounds shipped to UNRRA in 1946 and 1 million in 1947. 8/ Includes 91 million pounds for military civilian feeding. 9/ Preliminary. 10/ Produced commercially from fresh fruit in Florida; does not include reconstituted frozen juice or fresh juice produced for local sale.

1/ Commercial production only; excludes quantities frozen by industrial users such as hotels, bakeries, and confectioners. Data for 1925-41 from Western Canner and Packer. Since 1942 all data except miscellaneous fruits and fruit juices and citrus juices from National Association of Frozen Food Packers; data on miscellaneous fruits and fruit juices and citrus juices are based on reports of various canners' associations and survey of citrus industry in California-Arizona by United States Department of Agriculture.

2/ Derived from cold storage reports of the Statistical Reporting Service, issued monthly by the U. S. Department of Agriculture, processed.

3/ Civilian per capita only, 1941 to date.

4/ Preliminary.

1/ Includes apples, apricots, dates, figs, peaches, pears, prunes, raisins, currants and other dried grapes. Excludes unmerchantable figs beginning 1927 and substandard prunes 1929-41.

2/ Based on data from the Crop Reporting Board, Dried Fruit Association of California, Giannini Foundation of Agricultural Economics, and Western Canner and Packer. Production figures for dates not available until 1916. Beginning 1942, excludes from the total prune production quantities used for juice and concentrate.

3/ Packers' stocks only 1920-41, compiled from reports of the Giannini Foundation of Agricultural Economics; 1942-45 include packers' and distributors' holdings reported by Department of Commerce; beginning 1946 includes packers' stocks estimated by the Fruit and Vegetable Division, AMS. Differences between ending stocks for 1921 and 1929 and opening stocks in the following years result from an increase in commodity coverage.

4/ July-June basis 1909-39; September-August thereafter. Date on shipments to U. S. Territories begin in 1929. Beginning 1943 adjusted to include pitted dates on a "with pits" basis. Beginning 1948 trade with Hawaii and Alaska no longer reported.

5/ Civilian per capita only, beginning 1941.

6/ Includes 3 million pounds transferred in 1944 by military to nonmilitary agencies.

7/ Adjusted to exclude quantities transferred to nonmilitary agencies: 1943, 3 million pounds; 1944, 42 million pounds; 1945, 2 million pounds.

8/ Includes 42 million pounds transferred by military in 1945.

9/ Includes 2 million pounds transferred by military.

10/ Includes quantities for civilian feeding in areas occupied by our Armed Forces: 1947, 372 million pounds; 1948, 86 million pounds; 1949, 90 million pounds.

11/ Preliminary.

:	:	:	:	:	:	:	:	:	:	:	

1/ Includes all vegetables and melons grown primarily for fresh sale, except potatoes and sweetpotatoes. Excludes produce of farm and nonfarm home gardens. 2/ Estimated total commercial production for all States and for all vegetables for fresh market, including greenhouse production. For a few crops, includes production for processing. See note 5/. 3/ Includes stocks as follows: Onions, beginning 1919 (including cold storage stocks, 1946 to date); all Danish cabbage, 1922-38; New York Danish cabbage, 1939 to date. 4/ Beginning 1938 includes shipments from Puerto Rico. 5/ Includes estimated quantities of all vegetables used for dehydrating and of broccoli, Brussels sprouts, carrots, cauliflower, spinach through 1948 (except in principal processing States), and miscellaneous vegetables (including blackeye peas, pumpkin, squash, etc.) for processing; such quantities are not covered in the reported data on commercial production of vegetables for processing. Includes shrinkage and loss after harvest for onions only. 6/ Shipments to Hawaii not reported after March 1948. 7/ Civilian consumption only, beginning 1941. 8/ Includes shipments by the Department of Agriculture. 9/ Relatively low figure due to Canadian import embargo on certain items and severe import restrictions on others. Includes estimate of shipments to Hawaii for April to December 1948. 10/ Preliminary.

1/ Includes all melons grown primarily for fresh sale. Excludes produce of farm and nonfarm home gardens. 2/ Estimated total commercial production for all States. 3/ Shipments to Hawaii not reported after March 1948. Beginning 1950 excludes all shipments to Territories.

4/ Civilian consumption only, beginning 1941. 5/ Low figure due to Canadian import embargo in 1948 and most of 1949. Figure for 1948 includes estimate of shipments to Hawaii. 6/ Preliminary.

1961 11/	8,789	5,275	241	14,305	5,758	226	---	1	1	285	8,035	44.5				

1/ Includes asparagus, lima beans, snap beans, beets, carrots, corn, peas, pickles, pimientos, potatoes, pumpkin and squash, sauerkraut, spinach, sweetpotatoes, tomatoes, tomato and combination vegetable juice containing 70 percent or more tomato juice, tomato pulp, catsup, paste, sauce, and chili sauce, other greens, mixed and miscellaneous vegetables. Excludes baked beans, soups, and baby foods. 2/ From 1909 to 1942 data are on a pack-year basis beginning in the year indicated. Beginning 1943 the statistics are on a calendar-year basis. 3/ Derived from data of the National Canners Association, the Census of Manufactures, and the U. S. Departments of Agriculture and Commerce. 4/ Includes cannery stocks beginning 1921 (prior to 1933, estimates are for major items only) and wholesale distributors' stocks beginning 1934. Cannery stock data were derived mostly from reports of the National Canners Association; wholesale distributor stocks from U. S. Department of Commerce. The differences between ending stocks and beginning stocks in the following year arise from changes in coverage of available data. For each year, beginning and ending stocks are comparable. 5/ Beginning 1941, data exclude shipments by USDA for lend-lease, UNRRA, and other programs. 6/ Compiled from the records of the U. S. Department of Agriculture. Includes lend-lease, UNRRA, and other programs. The data have been adjusted to include transfers from military stocks to the UNRRA program in the years 1945-47. 7/ Data exclude transfers to UNRRA and other nonmilitary accounts, adjusted to year procured. Data for 1941 and 1942 are estimates based on fragmentary information. 8/ Civilian consumption only, beginning 1941. 9/ Includes the following quantities transferred from military agencies to UNRRA and other nonmilitary agencies: 1944, 57 million pounds; 1945, 125 million pounds; 1946, 6 million pounds. 10/ Includes 24 million pounds shipped to UNRRA during 1945 and 96 million pounds shipped in 1946. 11/ Preliminary.

1/ Includes asparagus, snap beans, lima beans, broccoli, Brussels sprouts, carrots, cauliflower, corn (cut-corn equivalent), okra, peas, peas and carrots (mixed), rhubarb, spinach, squash, succotash, potatoes and miscellaneous vegetables. 2/ Pack data, 1937 through 1943, compiled from Western Canner and Packer and miscellaneous vegetables. 3/ Stock data from Cold Storage beginning 1944 data from National Association of Frozen Food Packers. 4/ Stock data from Cold Storage Report of Statistical Reporting Service, U. S. Department of Agriculture. Monthly. (Processed). 5/ Preliminary.

4/ Civilian per capita beginning 1941. 5/ Preliminary.

1/ Includes merchantable stocks in hands of growers and local dealers in areas where produced plus estimated farm use and shrinkage after January 1. Merchantable stocks prior to 1930 were estimated; thereafter, officially reported and based on annual surveys of the Crop Reporting Board. Data for 1943-46 include the farm-weight equivalent of dehydrated potatoes held by USDA and estimates of quantities held by processors. 2/ Includes quantities used for starch, glucose, and alcohol. 3/ Farm-weight equivalent. 4/ Includes the farm-weight equivalent of dehydrated potatoes. 5/ Includes civilian feeding in areas occupied by our Armed Forces. Data include the farm-weight equivalent of dehydrated potatoes and potato flour, and, in 1949, a small quantity of potato starch. 6/ Includes farm-weight equivalent of potatoes used in mixtures, flour, dehydration, chips and shoestring potatoes. These uses for the past three years amounted to about 15 to 18 percent of the totals shown. Excludes quantities used for canned and frozen potatoes, since they are included with processed vegetable data. 7/ Civilian per capita consumption, beginning 1941. 8/ Production includes the following quantities left in the ground because of low prices (1,000 hundredweight): 1928, 4,477; 1932, 1,305; 1943, 264. These quantities are included in "Seed, feed, waste, and nonfood." 9/ Less than 50,000 hundredweight. 10/ Rough estimate. 11/ Includes the farm-weight equivalent of potato flour produced during 1947-49 and shipped for military civilian feeding during 1948-49. 12/ Export under price-support program, as reported by the former Production and Marketing Administration. 13/ Voluntary relief shipment. 14/ Preliminary.

1/ Estimated. Includes commercial stocks for sale as of January 1, quantity for seed from previous crop, and 40 percent of the farm home consumption of the previous crop year as farm-held supplies for following months. 2/ Estimates based on reported feed and waste for crop years: Prior to 1947 assumed 30 percent occurred before January 1; beginning 1947, because of more production in commercial areas with better storage facilities, this percentage was increased each year to 65 percent in 1953 and thereafter. 3/ Farm-weight equivalent of canned sweetpotatoes. 4/ All dehydrated vegetables. 5/ Estimates for 1941 and 1942 assumed to be used by military or for military civilian feeding in occupied territories. 6/ Estimates for 1943 data include purchases at market centers and estimated local purchases. 6/ Excludes canned sweetpotatoes since that item is included with canned vegetables. 7/ Civilian per capita consumption, beginning 1941. 8/ Preliminary.

1/ Stocks on farms and in commercial warehouses. For the years 1909–41 and 1947–49, January 1 stock estimates for each year are based on: Official reports on sales of old-crop beans after January 1; estimates for the previous crop of homegrown seed saved on farms and of farm home consumption; and estimated carryover stocks on the following September 1. January 1 stocks for 1943–46 represent interpolations based on official stock reports for December 1 of the preceding year and March of the corresponding year. Stocks on January 1, 1942 and 1950 to date are official estimates. 2/ Derived from Bureau of Census data, supplemented by USDA data since 1941. Dry peas included in exports through June 30, 1917 and in shipments to Territories through 1924. Includes garbanzos 1945 to date. 3/ Includes seed for dry bean crop (officially reported), the snap and lima bean crops for processing and fresh use. An approximation of seed to plant the green crops, based on seeding rates per acre, was made through 1941. Beginning 1942, data based on disappearance of dry bean vegetable (garden) seed as of July 1, as reported by seed producers. 4/ Adjusted for transfer by military to nonmilitary agencies. Includes procurement for relief feeding in occupied or liberated areas. 5/ Civilian only, 1941 to date. 6/ Adjusted to include exports of garbanzos. 7/ Includes broken beans exported to occupied or liberated areas under the military civilian feeding program: 28, 12, and 16 million pounds in 1947, 1948, and 1949, respectively. 8/ Preliminary.

1/ Season begins approximately September. Clean-out estimated through 1940. 2/ Stock figures 1942-46 officially reported. All other years estimated. Beginning 1939, data include dealers' stocks of vegetable or garden seed as of July 1. 3/ General imports through 1933; thereafter, imports for consumption. Includes dry peas, lupines, and lentils through 1933. Beginning 1934, includes dry peas and lentils only. Includes garbanzos prior to 1945. 4/ Includes seed for planting the dry field crop and green crops for processing and fresh use. Seed to plant the dry field crop was estimated through 1940; subsequent years were reported by Crop Reporting Board. An approximation of seed to plant the green crops, based on estimated seeding rates per acre, was made through 1938. Beginning 1939, data were based on disappearance of dry pea vegetable seed, fiscal year basis, as indicated by seed dealers reports and other data. Feed and loss estimated by Crop Reporting Board 1928-60; beginning 1961, no longer reported and assumed to be negligible. 5/ Data from U. S. Department of Commerce, except for period during World War II when this information was supplemented by data from USDA. The dry pea equivalent of dehydrated soups, etc. included beginning 1944. Includes garbanzos prior to 1945. 6/ Civilian only, 1942 to date. 7/ Adjusted to exclude exports of garbanzos. 8/ Excludes peas transferred by Army to nonmilitary agencies. 9/ Includes 9 million pounds procured by Army in 1943 and transferred in 1944. 10/ Includes 23 million pounds procured by Army in 1944 and transferred in 1945. 11/ Includes 3 million pounds of chipped peas in 1946 and 2 in 1947 shipped for civilian feeding. 12/ Preliminary.

<sup>1/</sup> Based on commercial production of wheat flour reported by Census; includes flour milled in bond from foreign wheat plus the estimated flour equivalent of farm wheat ground for flour or exchanged for flour for farm household use as reported by Statistical Reporting Service.

<sup>2/</sup> Commercial deliveries for export include milled-in-bond flour made from imported wheat.

<sup>3/</sup> U.S.D.A. procurement for export other than supplies for civilian relief feeding in occupied areas.

<sup>4/</sup> Commercial deliveries for export and U.S.D.A. procurement for export of semolina, macaroni, and bakery products in terms of flour.

<sup>5/</sup> Includes other products in terms of flour in addition to flour per se. Covers supplies for civilian relief feeding in occupied areas as well as those for direct use of U. S. Armed Forces.

<sup>6/</sup> Civilian consumption only, beginning 1941.

<sup>7/</sup> Preliminary.

1/ Marketing year beginning previous August in South and previous October in California. Unmilled rice converted on the basis of quantity of milled rice (heads, second heads and screenings, excluding brewers) produced annually from rough milled; converted separately for the southern States and California. 2/ Beginning 1945 includes estimated quantities from minor producing States. 3/ Includes stocks on farms, in country warehouses, in mills; excludes USDA holdings 1943 to date (shown separately). 4/ Exports, shipments and military procurement on fiscal-year basis, 1942-53; August year beginning 1954. 5/ For export and for shipment to U. S. Territories. 7/ Seed, feed, brewers use of broken rice, and balancing item. 8/ Includes civilian relief feeding in areas occupied by our Armed Forces. 9/ Civilian only, 1942 to date. 10/ Preliminary.

1/ Total farm, terminal market, and Government-owned stocks, 1927-43. Beginning 1944 figures also include interior mill, elevator, and warehouse stocks, data for which were not available prior to April 1943.

2/ Includes grain equivalent of corn products.

3/ Residual; includes feed, seed, alcohol, industrial uses, and waste.

4/ Excludes corn and corn products used in alcoholic beverages.

5/ Grain equivalent of corn products consumed. Civilian only, 1941 to date.

6/ Less than 500,000 bushels.

7/ Preliminary.

1/ Total farm and terminal market stocks, 1934-43. Beginning 1944, includes interior mill, elevator, and warehouse stocks, data for which were not available prior to April 1943.

2/ Department of Agriculture deliveries include grain equivalent of barley food products. Commercial exports include grain equivalent of barley and malt.

3/ Residual; includes feed, seed, alcohol, industrial uses, and waste.

4/ Excludes quantities used in alcoholic beverages.

5/ Beginning July 1944, malt conversion factor was changed to 1 bushel of barley equivalent to 34 pounds of malt. Prior to July 1944 the conversion factor used was 1 bushel of barley equivalent to 37.4 pounds of malt.

6/ Includes malt equivalent of the barley used in producing pearl barley.

7/ Less than 500,000 bushels.

8/ Preliminary.

															97.8

1/ U. S. Department of Agriculture crop-year production data, 1909-34; calendar-year data beginning 1935. 2/ Cane sugar stocks: 1909-33, Willett and Gray Weekly Statistical Sugar Trade Journal; beet sugar: 1909-13, estimates from Department of Agriculture 1909-33, Willett and Gray deliveries statistics; 1914-33 from Meinrath Brokerage Co.; 1934 to date stocks from Sugar production figures and Willett and Gray statistics; 1935 to date from Sugar Division, ASCS. 3/ 1909-34, data from U. S. Department of Commerce, Foreign Commerce and Navigation; 1935 to date from Sugar Division, ASCS. 4/ 1909-41, data from U. S. Department of Commerce, Foreign Commerce and Navigation; 1942 to date, quantities delivered for export 5/ Beginning in 1935 this adjustment was made for changes in stocks held by wholesalers, as compiled by Sugar Division, ASCS. 6/ Beginning in 1935 adjustment was made for changes in stocks held by wholesalers, as compiled by Sugar Division, ASCS. 7/ Military purchases of sugar, per se and including that in rations, are shown in the period 1941 to 1946. Since World War II, however, such purchases became less and less representative of total use of sugar by military personnel. Therefore, beginning 1947 military and civilian data were combined. 8/ Civilian consumption only, as shown in the period 1941 to 1946. 9/ Excludes 75,000 short tons passing through the U. S. but not officially reported as imports. 10/ Includes 145,000 short tons shipped commercially for civilian feeding; but does not include purchase abroad of about 133,000 short tons not entering into domestic supplies. 11/ Excludes 11,000 short tons shipped directly from Cuba. 12/ Includes 4,000 short tons for civilian feeding in occupied areas abroad. 13/ Adequate data not available. See footnote 7. 14/ Excludes 49,000 short tons for military civilian feeding in occupied areas abroad. 15/ Preliminary.

1/ Stocks 1910-19 from Balde Directoria de Industria E. Comercial, Sao Paulo; 1920-36, The Brazilian Review; 1937-40, from the New York Coffee and Sugar Exchange, Inc.; January 1, 1941 and January 1, 1948, from Bureau of Foreign and Domestic Commerce, U. S. Department of Commerce; January 1, 1942 through January 1, 1947, January 1, 1949 through January 1, 1952, and January 1, 1954 to date based on Bureau of Census reports; January 1, 1953 estimated based on trade data.

2/ Includes deliveries for export and territorial programs of roasted coffee and soluble coffee products on a green-bean equivalent basis. Does not include deliveries of green coffee per se because these transactions actually represent a re-export of coffee.

3/ Civilian per capita consumption only, 1941 to date.

4/ Less than 0.5 million pounds.

5/ Stocks January 1, 1945, 1946, and 1947 have been adjusted to include military stock transfers to nonmilitary agencies.

6/ Preliminary.

1/ Beginning September of year indicated 1909-39; year begins in August 1940 to date. 2/ Production in crop year beginning as follows: Southwestern area, August 1; Southeastern area, September 1; Virginia-Carolina area, November 1. 3/ 1909-37, 66.67 percent was used to convert farmers' stock peanuts to kernel basis; beginning 1938 conversion factors calculated from result of shelling operations in each year. 4/ 1920-37, October 1 stocks in crushing mills as reported by the Bureau of the Census; 1925-30, includes stocks in cold storage warehouses reported by Federal Trade Commission; beginning 1938, September 1 stocks in all positions, and includes oilstock peanuts, as reported by Statistical Reporting Service; beginning 1940 August 1 stocks. 5/ Represents increase in unreported stocks, mill shrinkage, and adjustment for new crop peanuts included in the beginning stocks. This is a residual item. 6/ Shipments to U. S. Territories included beginning 1943 except to Hawaii and Alaska after March 1948, when reporting was discontinued. Exports of oilstock peanuts, which began in 1946, are included. Before 1945, exports of shelled and unshelled peanuts reported separately. 7/ Includes edible-grade shelled peanuts crushed; year beginning October prior to 1940. 8/ Includes consumption of commercially cleaned and shelled peanuts plus quantities used on farms and farm sales for food use. Civilian per capita only, 1941 to date. 9/ Not available. 10/ Estimated from peanut oil production. 11/ Less than 500,000 pounds. 12/ Includes cold storage warehouse stocks as of September 1. 13/ Includes cold storage warehouse stocks as of July 1. 14/ Preliminary estimate.

1/ Imports for consumption of spices and herbs, ground and unground, as reported by the Department of Commerce minus exports of duty-free foreign spices. Negative imports for consumption indicate that more was exported, by drawing down stocks held in the United States, than was imported. 2/ Cassia, cassia buds, and cassia vera. 3/ Includes stems. 4/ Excludes 2,000 pounds for diplomatic officers.

- Continued

<sup>5/</sup> Includes cardamom seed, curry and curry powder products, laurel leaves, marjoram, origanum, crude saffron, thyme, and mixed or spices, n.s.p.f. Excludes exports of foreign duty-free spices, when reported. Exports of foreign spices "not separately provided for" include, if any, ground cloves, ground ginger root, individual spices. They have been deducted from the "other" category. <sup>6/</sup> Preliminary. <sup>7/</sup> Ground cinnamon, saffron, thyme, nutmeg, and pepper included in "other spices." <sup>8/</sup> Data no longer reported.

1/ Imports for consumption of spices reported by the Department of Commerce. See table 101 for details. 2/ Preceding year's crop; it is assumed that most of each year's crop was consumed in following calendar year. Excludes quantities used for seed, estimated at 4 pounds per acre planted. 3/ California, only. 4/ Reports of trade with Alaska and Hawaii were discontinued after March 1948. 5/ Imports for consumption plus mustard seed produced in the United States for consumption plus production of dried chili peppers (*capsicum*) in California minus domestic exports and shipments to U. S. Territories. 6/ Total consumption divided by total population because data on military takings not available. 7/ Not available. 8/ Preliminary.
