Lincoln, Nebraska  
June 1946

TRENDS IN LAND USE AND CROP PRODUCTION  
HUNTLEY IRRIGATION PROJECT, MONTANA  
1912-44 1/

This report shows trends in land use and crop production on the Huntley Irrigation Project in Yellowstone County, Montana, from 1912 to 1944. No analysis is made of the reasons for the various trends shown. Data for this report are from the Annual Project Histories and Annual Reports of the Bureau of Reclamation. The data are based on the crop census taken every year.

Definition of Terms

The principal terms used in this report follow as closely as possible the current reporting terminology of the Bureau of Reclamation. These terms are defined as follows:

"Irrigable acreage" is that acreage for which the Bureau of Reclamation was prepared to supply water.

"Net area in cultivation" is all irrigable land from which crops were harvested, land in soil improvement crops, fallow or fall plowed land, and land irrigated for pasture. It sometimes includes cropland that was not irrigated during that crop year.

"Cereal grains" include barley, corn, oats, rye, wheat, sorghum for grain, and speltz.

"Hay and forage crops" include alfalfa hay, clover hay, corn fodder, pasture, sorghum, mangels, ensilage, and grain straw.

"Other crops" include seed, garden, truck and fruit.

---

1/ This report was prepared by Earl F. Hodges and Lawrence A. Reuss. Harry A. Schmitt, formerly with the Bureau of Agricultural Economics, assisted in the compilation of the data.

The study upon which this report is based was started in 1944 and was continued under a Memorandum of Agreement between the Bureau of Agricultural Economics, United States Department of Agriculture, and the Bureau of Reclamation, United States Department of Interior, effective November 1945.

"Gross value of crops" includes the value of forage, irrigated pasture, harvested crops, government and commercial payments.

Sugar beet tops and flax straw are included with the value of "Hay and forage".

Agricultural Conservation payments other than sugar beet payments are included in the value of "Other crops".

The value of sugar beets in a given year is the initial factory payment for that year plus Agricultural Conservation and factory bonus payments received for beets grown in the previous crop year. For this reason the gross value of beets and the price per ton do not accurately reflect the returns received for the crop produced in any given year.

It should be noted that crop yield data combine irrigated and nonirrigated crop yields. Sugar beets, alfalfa and similar crops having high water requirements are usually irrigated whereas in some years small grains may be grown without irrigation.

			6	21	7	0	23	79	7	7	7	7	7	7	7	7

(Data not available prior to 1935)

1/ Acreage for which Bureau of Reclamation was prepared to supply water. Irrigable acreages for the years 1933 to 1944 are taken from the project "General Summary of Operation and Maintenance Results" and exceed the irrigable acreage reported by the Commissioner by amounts as follows: 4,593 acres in 1933; 3,583 acres in 1934; 3,067 acres in 1935; 2,287 acres in 1936; 3,039 acres in each of the years 1937, 1938 and 1939; 2,917 acres in 1940 and 1941; 2,918 acres in each of the years 1942, 1943 and 1944. Similar quantities were added to the "total area not irrigated" and, where shown, to the "idle" acreage.

2/ Harvested crops plus pasture. Temporarily suspended irrigated land included as follows: 7,213 acres in 1943; 7,063 in 1942; 7,162 in 1941; 6,934 in 1940; 6,725 in 1939; 6,863 in 1938; 6,863 in 1937.

3/ Land from which no crop was harvested such as fallow and hail-damaged crops.

4/ Temporarily suspended from the acreage upon which water charges are levied.

5/ Included in net area in cultivation.

6/ Estimated.

7/ Data not available.

8/ Less than 500 acres.

1910-44	19	6	7	4	2	21

1/ Net area in cultivation includes all land from which crops were harvested, fallow or fall plowed land, and land irrigated for pasture. It may include cropland that was not irrigated during the crop year.  
 2/ For example, in 1944 this item is composed of 832 acres alfalfa seed, 838 acres seed beans, 967 acres seed peas, 623 acres fallowed land, 389 acres soil building crops and 543 acres miscellaneous crops.  
 3/ Dry farmed land included as follows: 293 acres in 1944; 307 acres in 1943; 419 acres in 1942; 417 acres in 1941; 261 acres in 1940; 208 acres in 1939; 214 acres in 1938; 39 acres in 1937; 1,289 acres in 1928 and 370 acres in 1925.  
 4/ Less than 500 acres.

1/ For the period 1936 to 44 inclusive, government payments were divided between "Sugar beets" and "Miscellaneous crops". The value of beet tops is included with "Hay and forage". Agricultural conservation payments and factory bonuses were credited to the year in which payment was received.

2/ Such as seed, gardens, truck and fruit.
