Emotional Shocks and Consumer Spending

Qingyin Cai¹ Qingxiao Li²

¹ Department of Applied Economics, University of Minnesota

² Department of Agricultural Economics & Agribusiness, Louisiana State University

Motivation

- There is growing interest in the role of emotions in advertising, consumer decision-making, and retailing (Das & Varshneya, 2017).
- Although previous studies have focused on emotional cues within shopping environments and their influence on consumer expenditure (Cachero-Martínez & Vázquez-Casielles, 2021), the impact of direct emotional shocks from daily life on spending patterns remains underexplored.
- Following Card & Dahl (2011) and Eren & Mocan (2018), we utilize the unexpected outcomes of significant sports events to induce emotional shocks in consumers and examine their subsequent behavioral changes in spending.

Objectives

- We examine the impact of emotional shocks on consumer spending behaviors by leveraging the unexpected outcomes of National Football League (NFL) games as a natural experiment.

Empirical Methodology

- $\ln(S_{iks}) = \lambda_0 + \lambda_1 UpsetLoss_{ks} + \lambda_2 CloseLoss_{ks} + \lambda_3 UpsetWin_{ks} + \lambda_4 PredictedWin_{ks} + \lambda_5 PredictedClose_{ks} + \lambda_6 PredictedLoss_{ks} + \mathbf{X}'_{iks}\beta + \mu_i + \gamma_k + \sigma_s + \varepsilon_{iks}$
- where S_{iks} is the amount of dollar spent on goods by HH i on week k in game season s
- Predicted results based on the Las Vegas pregame point spread

Data

- The dataset includes NFL regular seasons from 2004 to 2019
- NielsenIQ Consumer panel data with purchase records of 81, 986 households
- Collected NFL game information

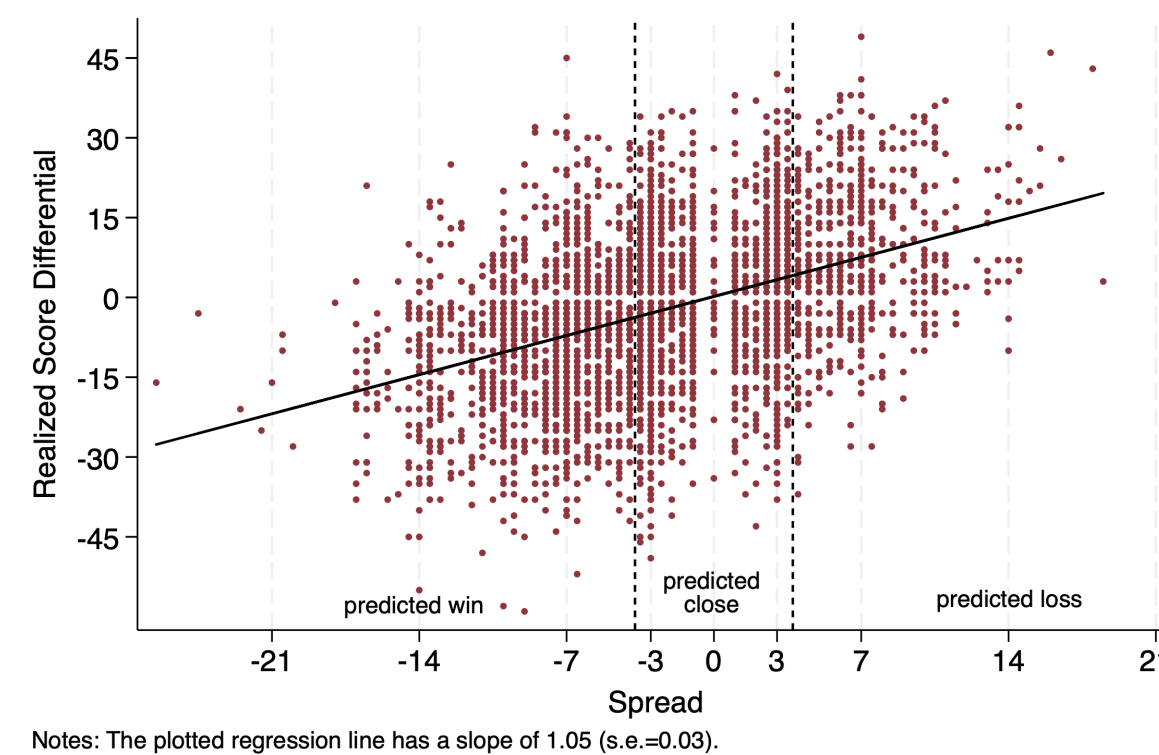

Figure 1 Realized score differential (opponent - home) and pregame point spread

Results

- Upset losses lead to higher total spending (1.3%~5.4%), food spending (1%~4.6%), and alcohol spending (0.3%~1.2%). Losses in closely contested games yield minimal effects.
- Upset wins lead to a reduction in household spending.
- The effects are more substantial during high-stakes games.
- The impact on consumer spending of negative emotions lasts for a short-term period (1~3 days) after the game.
- Early games impact game day spending more

Figure 2 The effects of emotional shocks from NFL games on household total spending

Conclusions

- Emotional shocks directly affect consumer spending behavior, but the effects are short-lived.
- Our findings enhance the understanding of individual responses to unexpected emotional shocks and provide evidence for the role of emotions in consumer behavior.
