# Selected Economic and Demographic Data for Counties of the Interior Columbia River Basin

Wendy J. McGinnis

## Abstract

A variety of county data have been assembled in support of the Interior Columbia River Basin Ecosystem Management Project. This research note is an effort to make some of the basic demographic and economic data available to the public for the counties involved in the assessment.

Keywords: Population, income, Columbia River basin.

## Introduction

During 1993, the U.S. Department of Agriculture, Forest Service (FS), and U.S. Department of the Interior, Bureau of Land Management (BLM), began an assessment of the National Forests and BLM-administered lands in eastern Washington and Oregon, which was later broadened to include lands in Idaho, western Montana, Wyoming, Nevada, and Utah that fall within the interior Columbia River basin watershed. The broad objective was to develop a framework for ecosystem management and assess biological, social, and economic systems within the interior Columbia River basin. Various county data have been assembled in support of this process, but generally they have been analyzed and published for groups of counties or for the region as a whole. This note is an effort to make some of the basic demographic and economic data available to the public, resource managers, and other interested parties for the counties involved in the assessment. It does not include an analysis or interpretation of the data. See also Machlis and others (1995) for a display of social indicators for the Idaho and Montana counties in the basin. For other documents published as part of the interior Columbia River basin ecosystem management project, contact the Communications Group, Pacific Northwest Research Station, (503) 326-2283.

## Technical Notes and Data Sources

The 15 tables that follow provide basic data on population, demographic characteristics, the land base, and economic activity for counties of the interior Columbia River basin (see fig. 1). Sources are given for these data, and the data are briefly described below.

### Table 1

**Population**—Figures for 1960, 1970, 1980, and 1990 are April 1 estimates based on the decennial census of population and housing conducted by the U.S. Bureau of the Census. Estimates for 1992 are as of July 1 from the current population reports prepared by Census Bureau in cooperation with the states.<sup>1</sup> The 1992 estimates may differ from those published by individual states. (Sources: U.S. Department of Commerce 1991a, 1991b, 1992c, 1992d.)

**Annualized rate of population change**—The annualized population changes are calculated as exponential rates of change according to the formula,

$$r = \log_{10}(P_{x+n}/P_x)/n \log_{10} e,$$

where  $P_x$  is the population at time period  $x$  and  $n$  is the number of years between the two time periods. See Murdock and Ellis (1991).

**Rural population**—The rural population is that portion of the population not classified as urban by the Census Bureau. A simplified definition is that urban residents live in places with a population of 2,500 or more. This classification cuts across counties and is different from the metropolitan vs. nonmetropolitan designation that is often used. For instance, a nonmetropolitan county may have both urban and rural residents. (Source: U.S. Department of Commerce 1992c.)

**Population density**—Population density was calculated by dividing the 1990 decennial census population by (1) the total area of the county<sup>2</sup> as determined by using a Geographic Information System (GIS) for the "all land" density, and (2) the total area of the county less lands administered by the FS, BLM, Bureau of Reclamation, National Park Service, and Fish and Wildlife Service for the "private land" density (some public lands are included, such as Department of Defense, Department of Energy, and State and local government lands). (Sources: see footnote 2 and U.S. Department of Commerce 1991a, 1991b.)

<sup>1</sup> The 1992 population estimates were downloaded from the Census Bureau's bulletin board service.

**Table 2**

**County total area**—The area within a county boundary was estimated by using GIS (see footnote 2). These data may differ slightly from Census Bureau or other estimates.

**Area in interior Columbia River basin**—The area within the interior Columbia River basin boundary was estimated for each county by using GIS (see footnote 2).

**Selected Federally administered lands: FS, BLM, Bureau of Reclamation, Fish and Wildlife Service, and National Park Service**—These acreages were estimated by using GIS (see footnote 2) and may differ from administrative acreages. In addition, they were estimated only for the portion of the county within the interior Columbia River basin boundary (that is, an agency may administer more acres within the county than are shown here). (Sources: see footnote 2.)

**Farmland, cropland, irrigated cropland, pasture land, and woodland**—These data come from the 1992 Census of Agriculture (U.S. Department of Commerce 1995). These acreages apply to the whole county and not just the portion within the interior Columbia River basin boundary. A farm is any place from which \$1,000 or more of agricultural products were produced and sold, or normally would have been sold, during the census year.

Farmland consists primarily of agricultural land used for crops, pasture, or grazing. It also includes woodland and wasteland not actually under cultivation or used for pasture or grazing, provided it was part of the farm operator's total operation. Land in farms includes acres set aside under annual commodity acreage programs as well as acres in the Conservation Reserve and Wetlands Reserve Programs for places meeting the farm definition. All grazing land, except land used under government per-head permits, was included as "land in farms," provided it was part of a farm or ranch.

Cropland, a subset of farmland, includes land from which crops were harvested or hay was cut; land in orchards, citrus groves, and vineyards and nursery and greenhouse products; cropland used only for pasture or grazing; land in cover crops, legumes, and soil-improvement grasses; land on which all crops failed; land in cultivated summer fallow; and idle cropland.

Irrigated cropland includes all land watered by any artificial or controlled means, such as sprinklers, furrows, or ditches, and spreader dikes. Included are supplemental, partial, and preplant irrigation. Each acre is counted only once regardless of the number of times it was irrigated or harvested.

Pastureland includes land used for pasture or grazing and is exclusive of cropland or woodland used for those purposes.

Woodland includes natural or planted woodlots or timber tracts, cutover and deforested land with young growth that has or will have value for wood products, land planted for Christmas tree production, and woodland pasture. Land covered by sagebrush or mesquite is to be reported as other pastureland and rangeland or other land. (Sources: U.S. Department of Commerce, 1995.)

**Table 3**

**Population age structure**—This is a 1990 decennial census estimate derived from responses to the short form distributed to all households. Owing to the way the question was asked, it is likely that about 10 percent of persons at each age are actually one year younger (Bureau of the Census 1991a). This is not a significant problem here, where our purpose was to distinguish between major life-stage groupings. Median ages are calculated by the Census Bureau and are defined as the point at which half the population is older and half is younger. (Sources: U.S. Department of Commerce 1991a, 1991b, 1992c, 1992d.)

**Dependency ratio**—The dependency ratio is calculated as the sum of the population under 18 years and over 64 years divided by the population between 18 and 64 and multiplied by 100 (all for 1990). The dependency ratio provides information about both the age structure of the population and its ability to support itself (see Murdock and Ellis 1991). (Sources: U.S. Department of Commerce 1991a, 1991b.)

**Table 4**

**Race and Hispanic origin**—These data are from the decennial censuses for 1980 and 1990 and are subject to self-reporting error and processing errors associated with census estimates. Hispanic origin is not a subset of race. A person of Hispanic origin can be of any race and is included in one of the race categories as well as in the Hispanic origin category. The “other race” category includes a number of people with write-in entries, such as multiracial or multiethnic or group names of Spanish or Hispanic origin (for example, Cuban, Mexican, Puerto Rican) as well as others. (Sources: U.S. Department of Commerce 1991a, 1991b, 1992c, 1992d.)

**Table 5**

**Educational attainment**—Educational attainment is collected from the sample of households who received the long form of the decennial census of population and housing. The estimates shown are for people 25 years and older and should be interpreted as the highest level achieved by the percentage of the population shown. (Source: U.S. Department of Commerce 1992a, 1992b.)

**Table 6**

**Employment by industry**—Industry employment was collected from the sample of households that received the long form of the 1990 decennial census of population and housing. It is reported here for employed persons 16 years and over who live in the county (they may work in a different county).

The industry classification system developed for the 1990 census consists of 235 categories based on the 1987 Standard Industrial Classification Manual (Office of Management and Budget 1987) (though they do not match one-to-one), which the Census Bureau then grouped into 17 industries on the STF 3A cd-rom (U.S. Department of Commerce 1992a), and were then reduced to 12 for display purposes in this report. See appendix A for a further breakdown of the major industries. For the purpose of this report, some service industries were combined. Health services were combined with personal services; education services with public administration; and the remainder of professional and other services with business and repair services.

Comparability between the statistics on industry from the 1990 census and statistics from other sources is affected by many factors. These factors are primarily geographic differences between place of residence and place of work (the Census Bureau Statistics are by place of residence), different dates of reference, and differences in counts because of dual job holding (the Census Bureau statistics are tabulated only for the job at which the person worked the greatest number of hours during the reference week, whereas many other sources count separately each job a person has). Industry data from population censuses cover all industries and all kinds of workers, whereas data from establishments often exclude private household workers, government workers, and the self-employed. **Employment by occupation**—Occupation was collected from the sample of households that received the long form of the 1990 decennial census of population and housing and is reported here for employed persons 16 years and over. As sample data, they are subject to both sampling and nonsampling error. Occupation refers to the kind of work the person does on the job regardless of the industry in which they are employed. It is reported by place of residence. The occupational classification system used for the census consisted of 500 specific occupational categories, which were then grouped by the Census Bureau into the 13 categories presented here. Appendix B lists a further breakdown of these groupings. (Sources: U.S. Department of Commerce 1992a, 1992b.)

**Table 8**

**Poverty rates**—These data were collected as part of the decennial census. Poverty rates are calculated as the percentage of persons (for whom poverty is determined) having incomes below the poverty level in the year indicated. Poverty rates were not determined for institutionalized persons, persons in military group quarters and college dormitories, and unrelated individuals under 15 years old. The poverty thresholds are based on a 1964 Social Security Administration definition (which was in turn based on family food consumption expenditures) modified and updated for inflation. Poverty classifications were determined first for families by size class and then extended to individuals. The average poverty threshold for a family of four persons was \$12,674 in 1989. The family income used to determine poverty status does not include income "in kind" from public welfare programs (such as food stamps). Note also that the Census Bureau definition of income differs from the definition of total personal income used by the Bureau of Economic Analysis (BEA). (Sources: U.S. Department of Commerce 1992a, 1992b, 1992c, 1992d.)

**Tables 9 to 14**

**Total personal income, nonfarm earnings, property income, transfers, and farm income**—Tables 9 to 14 provide a temporal subset of BEA's annual county income estimates that date to 1969 (U.S. Department of Commerce 1993, 1994). The data for 1970 to 1990 are from the U.S. Department of Commerce (1993), and the 1992 data are from the U.S. Department of Commerce (1994). The BEA frequently revises data, so the estimates reported here may not match later revisions. Nominal dollar estimates were adjusted for inflation by using the index of personal consumption expenditures. See appendix C for the index values used. As indicated in the per capita income discussion below, various events can lead to fluctuations in many of these income measures. Farm income is inherently quite variable, and the data provided here should be viewed within that context. In addition, nonfarm earnings, total personal income, and per capita income all show various degrees of responsiveness to national business cycles and other events. In particular the recessionary period of the early 1980s had a noticeable effect on income in the basin (declines occurred from about 1979 to 1982). Figures 2 and 3 show total personal income (and its components) and per capita income (all adjusted for inflation) for the basin from 1969 to 1992. These figures help provide a context for the subset of years provided in the tables. National recessions occurred in about 1970, 1974, 1980, 1982, and late 1990.

**Table 9**

**Per capita income**—Per capita income is calculated by dividing BEA's total personal income (see below) by July 1 intercensal population estimates. It is reported by place of residence.

Per capita income is a rough indicator of economic well-being. Many factors can influence both the level and fluctuation of per capita income, so some caution is in order in interpreting these data. For instance, a large institutional population (such as a university or correctional facility) may lower the average for an area, and a temporary event (such as a labor dispute) may cause a fluctuation. In addition, these data are not adjusted for local cost of living differences, which also may influence economic well-being. (Source: Department of Commerce 1993, 1994.)

**Tables 10 to 14**

**Total personal income and its components**—Total personal income is BEA's comprehensive estimate of income from all sources and a proxy for county economic activity. Total personal income for the residents of a county is composed of transfer payments, property income (dividends, interest, and rent), farm income, and nonfarm earnings (labor income net of personal contributions to social insurance and adjusted to place of residence). Labor income is composed of wages and salaries, other labor income (mainly employer contributions to private pension and welfare funds), and proprietor income. See figure 4 for a graphic representation of the 1992 composition of total personal income for the basin.

Figure 4—Composition of total personal income, 1992, for the interior Columbia River basin (because of rounding, percentages do not total 100).

Reports from BEA give estimates for more than 25 categories of transfer payments paid to a county's residents and nonprofit institutions on behalf of individuals. Transfer payments are payments for which current services were not rendered. Transfer payments include Social Security and government retirement payments, medicare and medicaid, unemployment insurance benefits, income maintenance payments (including in-kind payments, such as food stamps), and others.

Farm income consists of farm proprietor net income, the wages and salaries of farm labor (except farm labor contractors, which are classified as agricultural services and captured in nonfarm earnings), the pay-in-kind of hired farm labor, and the salaries of corporate farm officers. Proprietor net income is gross farm income less production expenditures (both being for noncorporate farms only). When production expenditures exceed gross farm income, farm proprietor net income is negative (which may lead to negative total farm income). Gross farm income includes cash receipts from marketing, government payments to farmers, rental value of farm dwellings, the value of food and fuel produced and consumed on farms, and the value of the net change in inventories of crops and livestock. These data rely heavily on the census of agriculture and estimates of farm income made by the USDA Economic Research Service. (Source: U.S. Department of Commerce 1993, 1994.)

**Economic Research Service (ERS) nonmetropolitan county typologies and recreation counties**—The Economic Research Service has classified U.S. nonmetropolitan counties by their economic specializations and whether they meet criteria relating to several rural policy issues. They first developed this typology from 1979 data (Bender and others 1985) and recently updated it to 1989 (Cook and Mizer 1994). In addition, Johnson and Beale (1995) have just published a classification for recreational counties. They used income, employment, and other indicators from the 1980s (such as seasonal housing from the 1980 census) to classify the counties in this group. These counties also include places with a specialization in recreation industries, such as gaming, unrelated to outdoor activities or natural amenities. See Johnson and Beale (1995) for a complete description of their methodology.

The 1989 ERS typology of nonmetropolitan counties has six groupings based on broad classifications of economic specialization (derived from labor income data): farming-dependent, manufacturing-dependent, mining-dependent, government-dependent, services-dependent, and nonspecialized (counties that fell into none of the other economic groups). This typology also has five groups related to policy concerns in rural areas: destination retirement, Federal lands, commuting, transfers-dependent, and persistent poverty counties (see appendix D for definitions). Three of these categories were not in the 1979 typology: services-dependent, commuting, and transfers-dependent. In addition, the nonspecialized economic group is not strictly comparable to the unclassified group in the earlier typology. The nonspecialized group is composed of counties that did not qualify for any other economic group, and the unclassified counties in the 1979 typology were those that fell into no economic or policy group. In 1979, none of the economic or policy categories was mutually exclusive. The 1989 typology has a new criteria that the economic groups be mutually exclusive, though a county may still be in more than one policy group. The criteria for each category remained much the same between 1979 and 1989, though there are some slight differences (see appendix D). Thus, some counties changed classification because of changes in the way the typologies were developed and defined and some changed due to real changes in their economies. ## **Appendix A: Industry**

The following list is the industrial classification developed for the 1990 census of population and housing (U.S. Department of Commerce 1992a). There are 235 categories for the employed, with 1 additional category for the experienced unemployed, and 7 additional categories for the Armed Forces. These categories are aggregated into 13 major groups. The classification is developed from the 1987 Standard Industrial Classification Manual (SIC; Office of Management and Budget 1987). The abbreviation "n.e.c." stands for not elsewhere classified. The codes in parentheses are the comparable SIC codes.

## **Appendix D: Definitions**

Below are definitions of the Economic Research Service nonmetropolitan economic and policy county types in the 1979 typology (Bender [and others] 1985).

Economic types:

**Farming-dependent counties**—Farming contributed a weighted annual average of 20 percent or more of total labor and proprietor income over the 5 years from 1975 to 1979.

**Manufacturing-dependent counties**—Manufacturing contributed 30 percent or more of total labor and proprietor income in 1979.

**Mining-dependent counties**—Mining contributed 20 percent or more to total labor and proprietor income in 1979.

**Specialized government counties**—Government activities contributed 25 percent or more to total labor and proprietor income in 1979.

Policy types:

**Federal lands counties**—Federal land was 33 percent or more of the land area in a county in 1977.

**Persistent-poverty counties**—Per capita personal income in the county was in the lowest quintile in each of the years 1950, 1959, 1969, and 1979.

**Retirement-destination counties**—For the 1970-80 period, net in-migration rates of people aged 60 and over were 15 percent or more of the expected 1980 population aged 60 and over.

Below are definitions of the Economic Research Service nonmetropolitan economic and policy county types in the 1989 typology (Cook and Mizer 1994).

Economic types:

**Farming-dependent counties**—Farming contributed a weighted annual average of 20 percent or more to total labor and proprietor income over the 3 years from 1987 to 1989.

**Government-dependent counties**—Government activities contributed a weighted annual average of 25 percent or more to total labor and proprietor income over the 3 years from 1987 to 1989.

**Manufacturing-dependent counties**—Manufacturing contributed a weighted annual average of 30 percent or more to total labor and proprietor income over the 3 years from 1987 to 1989.

**Mining-dependent counties**—Mining contributed a weighted annual average of 15 percent or more to total labor and proprietor income over the 3 years from 1987 to 1989.

**Services-dependent counties**—Service activities (private and personal services, agricultural services, wholesale and retail trade, finance and insurance, transportation, and public utilities) contributed a weighted annual average of 50 percent or more of total labor and proprietor income over the 3 years from 1987 to 1989.

**Nonspecialized counties**—Counties not classified as a specialized economic type over the 3 years from 1987 to 1989.

Policy types:

**Commuting counties**—Workers aged 16 years and over commuting to jobs outside their county of residence were 40 percent or more of all the county's workers in 1990.

**Federal lands counties**—Federal land was 30 percent or more of the land area in a county in 1987.

**Persistent-poverty counties**—Persons with poverty-level income in the preceding year were 20 percent or more of total population in each of 4 years: 1960, 1970, 1980, and 1990.

**Retirement-destination counties**—The population aged 60 years and over in 1990 increased by 15 percent or more during 1980-90 through in-movement of people.

**Transfers-dependent counties**—Income from transfer payments (Federal, State, and local) contributed a weighted annual average of 25 percent or more of total personal income over the 3 years from 1987 to 1989.

The **Forest Service** of the U.S. Department of Agriculture is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives—as directed by Congress—to provide increasingly greater service to a growing Nation.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status.
