July 1, 1940.

UNITED STATES DEPARTMENT OF AGRICULTURE
OFFICE OF INFORMATION

NATIONAL FARM PROGRAM DATA
1932-1940

IOWA HIGHLIGHTS

The story of agriculture today in Iowa and in the rest of the Nation is the story of an improved agriculture. Here are the highlights of progress under the National Farm Program in Iowa during the 7 years since it was started:

INCOME: Farmers Make More Money-- 1939 cash income was up 132 percent from 1932; buying power 220 percent ^{from} 1932; farm real estate values in 1940 up 28 percent from 1933; 94,365 acres of 1940 wheat protected by crop insurance; 2,270,100 bushels of wheat and 144,609,560 bushels of corn put in the Ever-Normal Granary under 1939 commodity loans; \$273,608,897 loaned by Farm Credit Administration agencies from 1933 to 1939; debts of low income farmers reduced \$7,844,539 under Farm Security Administration debt adjustment service; 23,735,000 pounds of surplus foodstuffs distributed to needy in last fiscal year.

CONSERVATION: Farmers Are Conserving Their Soil--224,000 Iowa farmers participated in the 1939 AAA program, representing about 84 percent of the State's cropland; 481,813 acres covered by 5-year agreements with the Soil Conservation Service in 1939; 743,000 trees distributed for planting during 1939.

SECURITY: Farmers Are More Secure In Their Homes--16,775 farm families received rural rehabilitation loans totalling more than \$9,000,000 from 1935 to 1940; \$718,226 made in grants in the same period; 198 tenant families started toward ownership by loans for farm purchases; 12,546 miles of rural electric lines to serve 34,421 farm families made possible by allotments of Rural Electrification Administration--16,953 more farms getting central station electric service in 1939 than in 1935.

DEMOCRACY: Farmers Help Run The Programs-- 100 county AAA offices with the 8,350 county and community committeemen administer/AAA program locally; 99 county committees and 31 tenant purchase committees working on program of Farm Security Administration; 174 local National Farm Loan associations and 17 production credit associations in operation; 97 county land-use planning committees formed.

- Land Use Planning by Farmers, page 19.

PART ONE: FARM INCOME

Iowa farmers in 1939 had 132 percent more cash income than they had in 1932. Farm cash income in Iowa was \$655,279,000 in 1939. Government payments accounted for \$69,444,000 of this amount directly. The 1939 cash income was 14 percent less than in 1929, when cash income was \$763,000,000. Cash income in 1932 was \$283,000,000.

Substantial gains in cash income from 1932 to 1939 by the producers of Iowa's most important farm products are shown in the following table:

TABLE I. Cash Income Received by Iowa Farmers for Principal Commodities Listed, in 1932 and in 1939, With Amount and Percent of Change

Commodity	Cash Income ^{1/}		Amount of Increase; 1939 over 1932	Percent of Increase 1939 over 1932
	1932	1939 ^{2/}		
	(Thousands of dollars)		(Percent)	
Hogs	92,091	167,994	75,903	82
Cattle and calves	77,023	161,402	84,379	110
Milk	43,106	60,789	17,683	41
Corn	13,466	103,039	89,573	665
Eggs	17,808	23,868	6,060	34
Chickens	15,937	17,486	1,549	10
Sheep and lambs	4,129	11,051	6,922	168
Oats	3,938	5,749	1,811	46
Wheat	1,186	3,554	2,368	200
Truck Crops	959	1,701	742	77

^{1/} Because farm income statistics are being revised, all figures in this table are not strictly comparable. For the most part figures are on a calendar year basis, but there are a few commodities which are on a crop year basis for 1932. All income figures in this table exclude Government payments.

^{2/} Preliminary.

For the country as a whole cash farm income in 1939, including Government payments, was 82 percent larger than in 1932. Cash farm income was \$4,682,000,000 in 1932 and \$8,540,000,000 in 1939, including \$807,000,000 in Government payments.

Prices of Farm Commodities

Better prices for Iowa's leading farm commodities have put more cash in the hands of the farmers of the state. The improvement in prices received by Iowa farmers for their principal commodities is shown in the following table:

Table II. Average Prices Received by Iowa Farmers for Commodities Listed, in 1932 and in 1939.

<u>Commodity</u>	<u>Unit</u>	<u>1932</u> (Dollars)	<u>1939 1/</u> (Dollars)
Milk (wholesale)	cwt.	1.20	1.55
Hogs	cwt.	3.20	6.00
Beef Cattle	cwt.	4.95	8.40
Veal Calves	cwt.	4.80	8.60
Sheep	cwt.	2.00	3.50
Lambs	cwt.	4.55	8.00
Wheat	bu.	.38	.67
Corn	bu.	.30	.54
Oats	bu.	.13	.28
Barley	bu.	.23	.37
Potatoes	bu.	.39	.75
Apples	bu.	.72	1.00
Wool	lb.	.088	.22
Butter	lb.	.20	.25
Chickens	lb.	.094	.117
Eggs	doz.	.118	.136

1/ Preliminary.

Farm Purchasing Power

Both farm income and prices paid by farmers declined sharply from 1929 to 1932, but farm income declined more. From 1932 to 1939 there was an increase in both farm income and prices paid by farmers, but farm income increased more. Thus farm buying power fell off from 1929 to 1932 and climbed upward from 1932 to 1939.

For the United States as a whole farm buying power in 1939 was 172 percent as much as in 1932 and 99 percent of the 1929 level. In other words, farmers were able to buy about as much in 1939 as in 1929 and 72 percent more than in 1932.

In Iowa farm purchasing power in 1939 was 220 percent as much as in 1932 and 113 percent of the 1929 level. Thus Iowa farmers in 1939 were in a position to buy 120 percent more of the things they needed than in 1932 and 13 percent more than in 1929.

The farmer's buying power can also be shown by the unit exchange value of farm products, namely, the ratio of prices received by farmers to prices paid by farmers for commodities used in living and production. While this measurement is

not available on a state basis, Iowa farmers naturally benefited from nation-wide improvement in the exchange value of farm products.

For all farm commodities, the unit exchange value was 26 percent higher in 1939 than in 1932. The following table comparing 1939 and 1932, shows the unit exchange value of all farm products, as well as specified groups of farm commodities that are important in Iowa.

Table III. Unit Exchange Value * of all Farm Products and of Specified Groups of Commodities Important in Iowa.

	Percent of Base Period 1910-1914		Percent Change : 1939 over 1932
	1932	: 1939	
All farm products	61	77	+ 26
Meat animals	59	91	+ 54
Grains	41	60	+ 46
Dairy products	78	86	+ 10

*Ratio of prices received to prices paid by farmers for commodities used in living and production, 1910-14 base.

Farm Real Estate Values

Gains in farm income, prices and buying power have been reflected in rising real estate values on Iowa farms. In the year ending March 1933 the value of farm real estate was only 58 percent of the period before the World War. From this low point the estimated value per acre in Iowa rose to 74 percent of pre-war for the year ending March 1940. Thus Iowa farmers found their real estate worth about 28 percent more early in 1940 than in the first part of 1933.

For the United States as a whole, in the year ending March 1940, farm real estate values rose to 85 percent of the level before the World War, compared with only 73 percent of pre-war in the year ending March, 1933. The 16 percent gain from 1933 to 1940 followed more than a decade of unbroken decline in the value of farm real estate.

Farm Foreclosures, Sales and Bankruptcies

Along with a rise in farm real estate values since 1932, there were more voluntary sales of farms in Iowa and fewer forced sales and bankruptcies.

Voluntary sales and trades of Iowa farms were 30.6 per thousand for the year ending March 1939, compared with 11.8 per thousand for the year ending March, 1933.

On the other hand, the number of forced farm sales in the state declined from 85.7 for the year ending March 1933 to only 13 per thousand for the year ending March 1939.

Farm bankruptcies in Iowa dropped from a total of 561 in the year ending June 30, 1933 to 78 for the fiscal year ending June 30, 1939.

In the United States as a whole, voluntary sales and trades of farms rose from 16.8 per thousand in the year 1933 to 28.2 per thousand in the year ending March, 1939, and forced sale of farms declined from 54.1 per thousand to 16.8 per thousand in the same period; farm bankruptcies in the entire country decreased 76 percent from 1933 to 1939.

All Phases of Farm Program Contribute to Income Improvement

Farmers of Iowa received \$17,260,000 in conservation payments under the 1937 program, \$28,201,937 under the 1938 program and an estimated \$40,887,617 under the 1939 program, including county association expenses.

In addition, under the Price Adjustment Act of 1938 farmers of the State received an estimated \$19,163,723 in parity payments on 1939 production. In the fiscal year ending June 30, 1939, Iowa sugar producers received \$163,422 under the Sugar Act of 1937.

For the United States as a whole, payments under the 1939 conservation program totaled \$506,179,199, including county association expenses.

Crop Insurance

Under the 1940 program in Iowa, 7,232 contracts insured an estimated 94,365 acres for a production of 1,245,538 bushels of wheat. Premiums paid in amounted to 107,067 bushels, as of May 31, 1940. Under the 1939 program, 4,645 policies were issued to insure a production of 894,064 bushels of wheat on 72,599 areas. A total of 57,148 bushels were paid in as premiums, and 127,291 bushels returned to 1,780 growers as indemnities, as of March 30, 1940.

Federal Credit Aids Agriculture

Farmers in Iowa obtained \$273,608,879 in loans from institutions under the supervision of the Farm Credit Administration from May 1, 1933, through December 31, 1939. In addition, credit was advanced to a considerable number of farmer cooperatives and privately organized agricultural financing institutions.

Largest amount was loaned by the Federal Land Bank of Omaha, making long-term first mortgage loans. Total amount of Federal land bank loans outstanding in Iowa on December 31, 1939, including loans made prior to the organization of the Farm Credit Administration, was \$201,586,590. In addition, \$52,641,048 of first and second mortgage Land Bank Commissioner loans were outstanding on that date.

From 1933 to 1935 almost 91 percent of Federal land bank and Commissioner loans made in Iowa were used to pay off old debts. Although the largest percentage of loans continues to be made for refinancing, since October 1, 1935, some 3,794 Iowa farmers and farm tenants have purchased farms, using \$21,692,300 credit obtained from the Federal Land Bank of Omaha and the Federal Farm Mortgage Corporation which provides funds for Land Bank Commissioner loans, to finance the purchases. This includes the resale of farms which had been acquired by these agencies.

The 17 production credit associations operating in the State have made 18,012 loans aggregating \$32,712,817 since their organization in 1933. These associations make loans for all types of short-term farm operations. Loans outstanding on December 31, 1939, totaled \$4,587,890.

The Omaha Bank for Cooperatives makes loans to farmers' marketing, purchasing and farm business associations. On December 31, 1939, the Omaha Bank had loans outstanding to 95 Iowa cooperatives aggregating \$1,167,685.

In the United States as a whole, during the same period, individual farmers and their cooperative organizations obtained \$5,951,000,000 in loans and discounts from institutions under supervision of the Farm Credit Administration. Land bank loans outstanding on December 31, 1939, totaled \$1,905,000,000; Land Bank Commissioner loans, \$691,000,000; production credit associations numbering 528, in six years made 1,312,000 loans aggregating \$1,442,000,000; in the same period the 12 district banks for cooperatives and the Central Bank made 6,868 loans aggregating \$491,047,000.

Debt Adjustment

In Iowa 5,741 farmers, through the Farm Debt Adjustment Service of the Farm Security Administration, reduced their debts through agreement with their creditors by \$7,844,539 in the period September 1, 1935 to December 31, 1939, a debt reduction of 19.6 percent. As a result Iowa farmers have been able to pay \$253,273 in back taxes.

In the United States as a whole, 111,131 farmers reduced their debts by adjustments totaling \$84,942,798 or 23.7 percent, and as a result have been able to pay more than \$4,860,000 in back taxes.

Commodity Loans Protect Income

Corn and wheat loans serve to protect and stabilize farm income, help to stabilize market supplies and prices, and protect both consumers and producers against the calamity of crop failure. Under the 1939 program in Iowa 4,448 wheat loans were made totaling \$1,721,231.46 on 2,270,100 bushels of wheat. 142,192 corn loans under the 1939 program aggregated \$82,402,975.35 on 144,609,560 bushels of corn.

In the United States as a whole, 70,000 wheat producers obtained loans on their 1938 crop, totaling about \$45,000,000 on 85,700,000 bushels of wheat, and about 235,000 producers stored 167,000,000 bushels of their 1939 crop under loans totaling about \$115,000,000.

Exports Aided

Two major export programs for wheat and cotton have assisted United States producers to retain their fair share of the world market. In the fiscal year which ended June 30, 1939 the first year of the wheat export program, 118 million bushels of wheat were sold for export. Of this amount, export of 94 million bushels was assisted directly by the export program. From July 1 through December 31, 1939, sales for export of approximately $24\frac{1}{2}$ million bushels of wheat and wheat in the form of flour were assisted by the continuing export programs.

How the wheat program has operated to improve the domestic wheat prices in the last year and a half is shown in the following: In August 1938 the average U.S. farm price was 34 cents under the Liverpool price. In August 1939, the U.S. price was about 3 cents above Liverpool. Since Liverpool is normally about 30 cents over the domestic farm price, this meant the U.S. farmer was receiving about 33 cents a bushel more for his wheat than if his price had been based on the world price.

Domestic Consumption Increased

Expanded domestic distribution and consumption of surplus farm products was brought about through two types of programs; direct purchase of commodities for distribution to needy families through state welfare agencies, and the Food Order Stamp Plan which puts increased food buying power directly into the hands of low-income families.

In Iowa/ⁱⁿ the fiscal year ending June 30, 1939, 23,735,000 pounds of surplus foodstuffs were distributed by the Federal Surplus Commodities Corporation, compared

with a total of 1,970,079,155 pounds distributed throughout the United States in the same period.

Commodities purchased in Iowa included 170,000 lbs. cabbage, 62,500 barrels of wheat cereal, 21,300 barrels of corn meal, 52,200 barrels of graham flour, and 45,600 barrels of white flour.

Up to July 1, 1940, the food order stamp plan was in operation in Des Moines, Sioux City, Cedar Rapids and the rest of Linn County, and in the Tri-City area, Davenport and the rest of Scott County, while others are to be added to the list.

PART TWO: CONSERVATION AND WISE USE OF AGRICULTURAL RESOURCES

Income improvement and conservation of national resources have gone hand in hand in Iowa since 1933.

Under the first agricultural conservation program in 1936 about 165,300 Iowa farmers participated. Of the total cropland, about 73 percent, or 17,593,600 acres, was covered by applications for payments. A total of 1,871,900 acres was diverted from soil-depleting crops. Soil-building practices were put into effect on about 3,313,900 acres as follows: New seedings of legumes and legume mixtures, perennial grasses for pasture, and green manure crops -- 3,657,700 acres; fertilizer and lime applications -- 156,100 acres; and forest/tree plantings -- 140 acres.

Iowa farmers have continued to participate actively in the A.A.A. programs. There were 121,218 payees in the 1937 program and 143,604 in the 1938 program. Applications for payments covered 14,617,785 acres, or 60 percent of the cropland in the State, under the 1937 program and 15,400,844 acres, or 64 percent of the cropland, under the 1938 program.

Soil-building practices were put into effect in the State as follows under the A.A.A. programs for 1937 and 1938:

	<u>Unit</u>	<u>1937</u>	<u>1938</u>
New seedings	Acres	2,440,603	2,646,785
Green-manure and cover crops	Acres	252	1,846
Mulching	tons	100	120
Forest/tree practices	acres	216	219
Fertilizer and lime applications	tons	218,884	203,232
Natural reseeding of pastures	acres	28	2,675
Artificial reseeding of pastures	lbs. of seed	--	91,990
Terracing	lin. ft.	37,000	44,000
Other erosion control practices	acres	10	2,520

In the United States as a whole, under the 1938 Agricultural Conservation Program, new seedings covered 30,075,000 acres and green-manure and cover crops 25,244,000 acres. Fertilizer and lime applications totaled 5,547,000 tons.

Forest tree practices covered 197,000 acres and pasture practices about 2,205,000 acres. Protected summer fallow, strip cropping, contour farming, and listing were carried out on 15,990,000 acres. Terracing was carried out to the extent of 392,036,000 linear feet.

Soil Conservation Service Activities

In addition to the Agricultural Conservation Program, many Iowa farmers have signed five-year agreements with the Soil Conservation Service for complete program of erosion control and good land management. As of December 31, 1939, 3,449 farms including 481,813 acres were operating under such agreements. This figure includes land in Soil Conservation projects, CCC camp soil conservation work areas, and farm planned cooperatively by the Soil Conservation Service and State Extension Service.

Approximately 1,902 acres unsuited to continued cropping have been purchased and developed for uses for which this land is better suited, principally forestry and grazing under the Land Utilization Program.

In the United States as a whole, a total of 48,267,000 acres of farm land in 82,000 farms were covered by 5-year contracts with the Soil Conservation Service up to June 30, 1939. Soil Conservation Service demonstration areas now include 68,847,000 acres. Soil Conservation Districts, number 217, covered a combined area of 120,000,000 acres of the Nation's 1,900,000,000 acres of land by January 1, 1940, with another 100 districts in process of organization. Within the 217 organized districts were 1,000,000 farms.

Approximately 8,600,000 acres of land unsuited to continued cropping have been purchased and developed for uses for which this land is better suited, principally forestry and grazing.

Forest Conservation and Reforestation

Approximately 66,000 of the 221,900 farms in Iowa contain woodland, and farm woodlands in the aggregate amount to 2,300,000 acres, or about 7 percent of the State's farm area.

Forest conservation and reforestation on both public and private lands in Iowa have been advancing rapidly from 1932 to 1940. Under the Clarke-McNary law, which provides for Federal-State cooperation in the production and distribution of trees, 743,000 trees were distributed for planting on farm lands during 1939. Extensive plantings of forest trees also are made on farm lands under agreement with the Soil Conservation Service.

In the United States as a whole, the national forest system now includes about 175 million acres in 40 States. More than 12 million acres have been purchased or approved for purchase for national forests since March 1933, about $2\frac{1}{2}$ times as much land as was purchased for national forests in the preceding 22 years. Approximately 125 million trees produced largely in Forest Service nurseries were planted during 1939 on 131,000 acres of national forest land.

In the Prairie States Forestry Shelterbelt Project of the Forest Service 125 million trees have been used in 11,000 miles of plantings and provide protection for about 3 million acres of land, in the Great Plains, where protection is especially needed.

About 314,000 trees were planted on farm lands in 1938 in the farm forestry program of the Soil Conservation Service, and 55 million trees were distributed for farm planting under Forest Service-State cooperation through the Clarke-McNary law.

Under the A.A.A. program in 1938 about 55,445 acres of farm land were planted to forest trees.

PART THREE: GREATER SECURITY AND BETTER LIVING ON THE LAND

Aside from the program designed to provide greater equality of income for agriculture as a whole, and nation-wide conservation practices, special attention has been given to more needy farm families requiring additional aid to become self-supporting. Special programs have been directed to low-income farmers suffering from such additional handicaps as drought, poor farming practices, worn-out or inadequate land, unsound tenure conditions, or overwhelming debt.

From 1935 to 1940 in Iowa, the Farm Security Administration aided 16,775 farm families with rural rehabilitation loans aggregating \$9,000,000 to enable them to get a new start and again become self-supporting.

By following complete farm and home management plans in 1939, 9,238 rehabilitation borrowers in Iowa had an average net income of \$735.05 per family as compared with \$478.27 in the year before they came to F.S.A. for help, an increase of 54 percent, and increased their average net worth over and above all debts from \$928.56 to \$1,436.47, a gain of 55 percent in the same period. Thus these families had added \$4,692,073 to the wealth of their communities and increased their own annual incomes by a total of \$2,372,156. The typical rehabilitation family in Iowa has borrowed \$845.55 and already has repaid \$204.58. Iowa rehabilitation borrowers in 1939 produced \$1,863,489 worth of goods for home/consumption, compared with \$1,255,259 worth before entering the Farm Security Administration program. In 1939 these families canned an average of 292 quarts of fruits and vegetables per family, for home consumption; produced an average of 456 gallons of milk per family; and an average of 20 1/4 tons of forage per family. Rehabilitation borrowers in Iowa are now operating an average of 150 acres, an increase of 42.45 acres since they came to the program. This increased acreage, while not adding materially to the production of commercial crops, has maintained a better diet for these families.

At the close of 1939, 5,354 Iowa families, had received grants for emergency relief aggregating \$718,226.

Under the Bankhead-Jones Act loans for farm purchases were made to 198 tenant families in Iowa as of December 31, 1939, aggregating \$1,887,335.

In the United States as a whole, from 1935 to 1940, the Farm Security Administration aided approximately 800,000 farm families with rehabilitation loans. By following complete farm and home management plans, 360,000 of these borrowers covered by a survey in 1939 had increased their net worth over and above all debts by 26 percent, and their production of food for home consumption by 64%. The average borrower reported increasing his net worth by more than \$230.42 since coming in to the program.

The Farm Security Administration has made rehabilitation loans totalling more than \$370,000,000 since 1935. Although these loans are usually made for a period of five years, and much of the money is not yet due, these farmers who could not get adequate credit from any other source already have repaid more than \$130,000,000 into the U.S. Treasury. Ultimately it is expected that at least 80 percent of these loans will be collected.

Under the Bankhead-Jones Act, loans for farm purchases were made to 6,678 tenant families by December 31, 1939.

Rural Electrification

By June 30, 1939, the Rural Electrification Administration had made allotments in Iowa aggregating \$14,184,128 for the construction of 12,546 miles of line to serve 34,421 farm families.

By June 30, 1939, 49,000, or 22.7 percent of the farms in the State, had central station service, compared with 32,047, or 14.4 percent having central

station service before the R.E.A. began operations in 1935. This is a net increase of 16,953 farms or 52.9 percent. Surveys showed that 75% of Iowa farms served by R.E.A. lines have washing machines; 90 percent have electric irons; 30% have electric vacuum cleaners; general utility electric motors, electric chick brooders and poultry lighting have gained favor since the beginning of the program.

There were 50 REA-financed rural electric systems in the State by September 1, 1939. As of June 30, 1940, \$826,000 of the total allotments made to the cooperatives was set aside for the construction of 3 generating plants.

In the United States as a whole, to the close of 1939, the Rural Electrification Administration of the Department of Agriculture has made total allotments of \$273,000,000 for the construction of 260,000 miles of line to serve 600,000 farm families. Already 400,000 farms have been connected to REA-sponsored lines, the greater majority of which are cooperatively managed. The number of electrified farms in the United States has more than doubled from 1935 to the present time. Approximately 25 percent of American farms were electrified by January 1, 1940, compared with 10.9 percent on January 1, 1935.

The first part of the document is a list of names and titles, including the names of the members of the committee and the names of the individuals who were interviewed. The names are listed in a columnar format, with the names of the committee members on the left and the names of the interviewees on the right. The names are written in a cursive hand, and the list is organized in a way that suggests a chronological or alphabetical order.

The second part of the document is a series of questions and answers, which are written in a cursive hand. The questions are written in a larger, bolder hand than the answers, and the answers are written in a smaller, more regular hand. The questions and answers are organized in a way that suggests a chronological or alphabetical order.

The third part of the document is a series of notes and observations, which are written in a cursive hand. The notes and observations are organized in a way that suggests a chronological or alphabetical order.

The fourth part of the document is a series of signatures and dates, which are written in a cursive hand. The signatures and dates are organized in a way that suggests a chronological or alphabetical order.

The fifth part of the document is a series of initials and dates, which are written in a cursive hand. The initials and dates are organized in a way that suggests a chronological or alphabetical order.

The sixth part of the document is a series of names and titles, which are written in a cursive hand. The names and titles are organized in a way that suggests a chronological or alphabetical order.

PART FOUR: STRENGTHENING DEMOCRACY THROUGH THE FARM PROGRAMS

Democracy has been both the end and the means of National Farm Programs from 1933 to the present. Through local committees, farmers have the responsibility for local administration.

About 6 million of the Nation's 6,800,000 farmers are participating in the Agricultural Conservation Program today. Participation in Iowa and in the United States since the AAA began in 1933 was as follows:

	<u>Iowa</u>	Number of contracts accepted by AAA		<u>United States</u>
1933	3,719		1933	1,625,912
1934	177,738		1934	3,105,110
1935	152,008		1935	3,399,779
1936 <u>1/</u>	2,170		1936 <u>1/</u>	291,652

1/ Winter wheat and rye contracts made before January 6, 1936.

	<u>Iowa</u>	Number of payees under the Agricultural Con- servation Program		<u>United States</u>
1936	165,316		1936	3,880,447
1937	121,218		1937	3,743,904
1938	143,604		1938	5,248,796
1939	224,000		1939	5,764,200

The results of referendum votes among Iowa farmers show the demand for full application of the A.A.A. programs. Important referenda in which Iowa farmers participated were as follows:

Nature of Referendum	Date	Votes of Participating Farmers		Percent For
		For	Against	
Corn-hogs	Oct. 1934	67,186	30,055	69
Corn-hogs	Oct. 1935	160,768	26,728	86
Wheat	May, 1935	33,017	399	88

In Iowa in 1940, there were 500 members and alternates of county A.A.A. committees and 7,850 members and alternates of community A.A.A. committees which administer the Agricultural Conservation Program locally. There were also 99 county committees of the Farm Security Administration in the State and 31 county tenant

purchase committees. Cooperating with the Farm Credit Administration were 174 local National Farm Loan Associations and 17 Production Credit Associations.

Soil Conservation Districts are organized and developed under State laws by farmers, who have an opportunity to express their preferences both as to planning and operations within the District. By means of these Districts farmers can coordinate their efforts to control erosion thoroughly along watershed lines with technical assistance often being furnished by local, State and Federal agencies.

Land Use Planning by Farmers

Land Use Planning Committees study all agricultural problems, and how Federal, State, and local agricultural services can best be applied. Representative farm people and agricultural officials are members of both county and community planning committees. In this way farmers have a voice in planning what all public agricultural agencies will do in their communities.

In Iowa, 97 county Land Use Planning Committees, with 1,375 farmer members have been formed and others were expected to be organized in 1940.

In the United States as a whole, approximately 135,000 farmers served on A.A.A. committees; there were 2,907 Debt Adjustment Committees; 1,289 Tenant Purchase Committees; and approximately 1,500 committees for rehabilitation loans; about 3,700 active National Farm Loan Associations, and 528 Production Credit Associations; approximately 370 Soil Conservation Districts were either organized or in the process of organization.

There were approximately 19,000 farmers by the end of 1939 participating as members of county Land Use Planning Committees, and 65,000 as members of community Land Use Planning Committees.
