Representative Farms Economic Outlook for the January 2007 FAPRI/AFPC Baseline

AFPC Working Paper 07-1

February 2007

Agricultural and Food Policy Center The Texas A&M University System

AFPC

Teaching Research Extension

A policy working paper is designed to provide economic research on a timely basis. It is an interim product of a larger AFPC research project which will eventually be published as a policy research report. These results are published at this time because they are believed to contain relevant information to the resolution of current policy issues. AFPC welcomes comments and discussions of these results and their implications. Address such comments to the author(s) at:

Executive Summary

The Agricultural and Food Policy Center (AFPC) at Texas A&M University develops and maintains data to simulate 99 representative crop, dairy, and livestock operations in major production areas in 28 states. The chief purpose of this analysis is to project those farms' economic viability by region and commodity for 2007 through 2012. The data necessary to simulate the economic activity of these operations is developed through ongoing cooperation with panels of agricultural producers in each of these states. The Food and Agricultural Policy Research Institute (FAPRI) provided projected prices, policy variables, and input inflation rates in their January 2007 Baseline.

Under the January 2007 Baseline, 20 of the 64 crop farms are considered in good liquidity condition (less than a 25 percent chance of negative ending cash in 2012). Five crop farms have between a 25 percent and a 50 percent likelihood of negative ending cash. The remaining 39 crop farms have greater than a 50 percent chance of negative ending cash. Additionally, 30 of the 64 crop farms are considered in good equity position (less than a 25 percent chance of decreasing real net worth during the study period). Nine crop farms have between a 25 percent and 50 percent likelihood of losing real net worth, and 25 crop farms have greater than a 50 percent probability of decreasing real net worth. The following discussion provides an overall evaluation by commodity considering both liquidity and equity measures.

- **FEEDGRAIN FARMS:** Eleven of the 19 feedgrain farms are in good overall financial condition. Two can be considered to be in marginal condition, and six are in poor condition.
- **WHEAT FARMS:** Six of the 11 wheat farms are classified in good financial condition, five are marginal, and none are in poor condition.
- **COTTON FARMS:** Two of the 20 cotton farms are classified in good condition, five are in marginal condition, and 13 are in poor condition. Also, 12 of these farms have more than a 50 percent chance of losing real net worth by 2012.
- **RICE FARMS:** None of the 14 rice farms are in good condition, one is classified in marginal condition, and 13 farms are projected to be in poor financial condition through 2012.
- **DAIRY FARMS:** Nine of the 23 dairy farms are in good overall financial condition. Four are considered to be in marginal condition, and ten are in poor condition.
- **BEEF CATTLE RANCHES:** Four of the 12 cattle ranches are classified in good financial condition, eight are classified in marginal condition, and none are projected to be in poor condition.

Comparison of Projected Overall Economic Viability of Representative Farms, Dairies, and Ranches Between January 2006¹ and January 2007² FAPRI/AFPC Baselines

Figure 1. Feedgrain Farms

- The improvement in price projections, partially driven by increased ethanol production, helped increase the percentage of farms classified as *good*.
- The 2007 baseline indicates a significant improvement in financial viability of representative feedgrain farms with more than fifty percent of the farms in the *good* category.

Figure 2. Wheat Farms

- Increased price projections contributed to the elimination of farms categorized as *poor*.
- The 2007 baseline representative wheat farms show marked improvement in the financial viability over the previous baselines.

¹ Projected overall economic viability for January 2006 Baseline is based on a 2006-2010 study period.

² Projected overall economic viability for January 2007 Baseline is based on a 2007-2012 study period.

Figure 3. Cotton Farms

- The 2007 baseline results in modest improvement in the financial viability of the representative cotton farms.
- Cotton prices rise above the loan rate, reaching \$0.55 in 2008/09 and increasing to \$0.58 by 2012/13.

Figure 4. Rice Farms

- The majority of representative rice farms continue to be classified as *poor*.
- Slight increases in projected prices are not enough to offset increasing costs of production.

Figure 5. Dairies

- Projected increases in feed prices combined with relatively flat milk prices result in a decline in the financial viability of the representative dairies.
- Milk prices are projected to gradually increase from \$14.21/cwt in 2007/08 to \$14.49 in 2012/13.

Figure 6. Ranches

- The number of ranches classified as *poor* is now zero; however, the number of ranches classified as *good* has also declined.
- While high corn prices have driven cattle prices lower, the opening of some export markets and slower expansion of the U.S. cowherd (due to drought) have dampened the price decline.

REPRESENTATIVE FARMS ECONOMIC OUTLOOK FOR THE JANUARY 2007 FAPRI/AFPC BASELINE

The farm level economic impacts of the Farm Security and Rural Investment Act of 2002 (2002 Farm Bill) on representative crop, dairy, and livestock operations are projected in this report. The analysis was conducted over the 2007-2012 planning horizon using FLIPSIM, AFPC's whole farm simulation model. Data to simulate agricultural operations in the nation's major production regions came from two sources:

- Producer panel cooperation to develop economic information to describe and simulate representative crop, livestock, and dairy farms.
- Projected prices, policy variables, and input inflation rates from the Food and Agricultural Policy Research Institute (FAPRI) January 2007 Baseline.

The FLIPSIM policy simulation model incorporates the historical risk faced by agricultural producers for prices and production. This report presents the results of the January 2007 Baseline in a risk context using selected simulated probabilities and ranges for annual net cash farm income values. The probability of a farm experiencing a negative ending cash balance and the probability of a farm losing real net worth are included as indicators of the cash flow and equity risks facing producers through the year 2012.

This report is organized into ten sections. The first section summarizes the process used to develop the representative farms and the key assumptions utilized for the farm level analysis. The second section summarizes the FAPRI January 2007 Baseline and the policy and price assumptions used for the representative farm analyses. The third through sixth sections present the results of the simulation analyses for feed grain, wheat, cotton, and rice farms. The seventh and eighth sections summarize simulation results for dairy and cattle. Two appendices constitute the final sections of the report. Appendix A provides tables to summarize the physical and financial characteristics for each of the representative farms. Appendix B provides the names of producers, land grant faculty, and industry leaders who cooperated in the panel interview process to develop the representative farms.

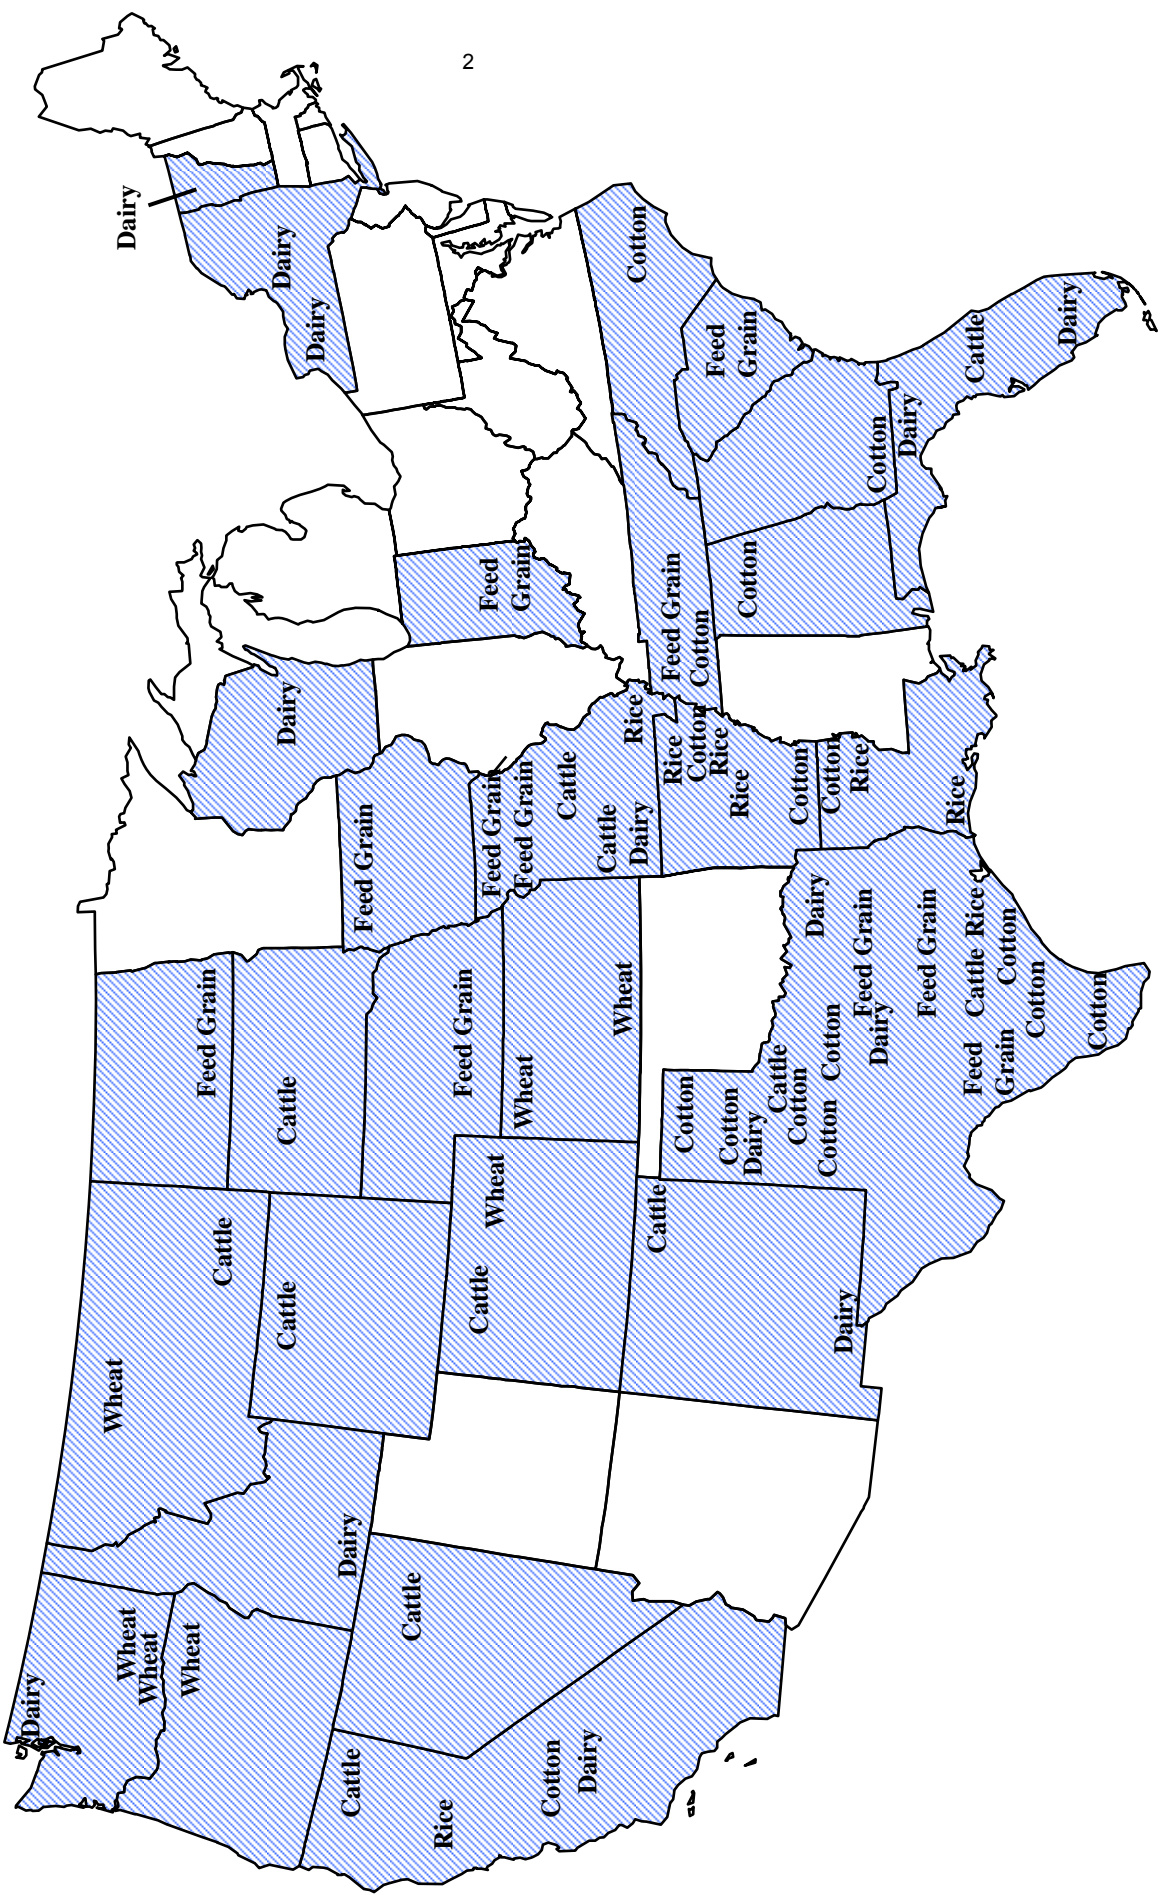

Panel Process

AFPC has developed and maintains data to simulate 99 representative crop farms, dairies, and livestock operations chosen from major production areas across the United States (Figure 7). Characteristics for each of the operations in terms of location, size, crop mix, assets, and average receipts are summarized in Appendix A. The locations of these farms are primarily the results of discussions with staffers for the U.S. House and Senate Agriculture Committees. Information necessary to simulate the economic activity on these representative farms is developed from panels of producers using a consensus-building interview process. Normally two farms are developed in each region using separate panels of producers: one is representative of moderate size full-time farm operations, and the second panel usually represents farms two to three times larger.

The data collected from the panel farms are analyzed in the whole farm simulation model (FLIPSIM) developed by AFPC. The producer panels are provided pro-forma financial statements for their representative farm and are asked to verify the accuracy of simulated results for the past year and the reasonableness of a six-year projection. Each panel must approve the model's ability to reasonably reflect the economic activity on their representative farm prior to using the farm for policy analyses.

All farms used in the analysis have been updated through panel discussions since October 2002, with the majority being updated in the last two years. All of the crop farms are assumed to begin 2005 with 20 percent intermediate-term and long-term debt. Initial debt levels in 2005 for dairy farms were set at 30 percent and initial debt levels for beef cattle ranches were 1 percent for land and 5 percent for cattle and machinery. The debt levels the farms have at the outset of 2005 are based on a stratified tabulation of the ERS-USDA Farm

Figure 7. Representative Farms and Ranches

Cost and Returns Survey for 2004 (using the survey data for moderate to large size farms in states where AFPC has representative farms), and panel member input.

Key Assumptions

- All farms classified as moderate scale are the size (acres or number of livestock) considered to be representative of a majority of full-time commercial farming operations in the study area. In many regions, a second farm two to three times larger than the moderate scale farm is developed as an indicator of size economies.
- The farm level simulation model incorporates price and yield risk faced by farmers. Historical yield variability for crops and production for livestock (sale weights, birth rates, and milk per cow) over the past ten years are assumed to prevail for the planning horizon. Random crop, livestock and milk prices are simulated using the January 2007 Baseline by FAPRI as the forecast of average prices. Prices reflect national price volatility caused by international production and demand as well as U.S. production risk.
- Historical crop yields (2006) were held constant based on actual values obtained from the producers. Crop yields for 2007-2012 were simulated stochastically based on the average yields provided by the producers and the historical yield variability for the farm. Prices were held constant at producer-provided values for 2006. FAPRI's January 2007 Baseline prices were localized for the farms and used as the average prices for 2007-2012 to simulate stochastic crop and livestock prices.
- Dairy and beef cattle herd sizes are held constant for all farms over the 2007-2012 planning horizon.
- The farms were structured so government payment limits were not effective at reducing direct, counter-cyclical, or loan deficiency payments.
- The farm is subject to owner/operator federal (income and self-employment) and applicable state income taxes as a sole proprietor, based on the current income tax provisions.
- No off-farm-related income, including family employment, was included in the analyses. Therefore, the farm reflects only the ability of the farm to provide for family living and capital replacement.
- Farm program parameters, average annual prices, crop and livestock yield trends, interest rates, and input cost inflation (deflation) are based on the January 2007 FAPRI Baseline which assumes continuation of the 2002 Farm Bill through 2012.
- Direct payments for participating cotton, wheat, feed grain, oilseed, and rice producers are made based on 85 percent of their historical base acreage times direct payment yield times a direct payment rate. The direct payment rate is included in the January 2007 FAPRI Baseline.
- Marketing loan provisions for cotton, rice, wheat, feed grains, soybeans, sunflowers, and dry peas were authorized in the 2002 Farm Bill and are assumed to be in place for the farm level analysis.
- Counter-cyclical payments are triggered by marketing year prices included in the January 2007 FAPRI Baseline.
- The milk support price remains at \$9.90/cwt. through 2012.
- Actual average loan deficiency payment (LDP) rates in the counties where the representative farms are located are used for 2006.
- All crop farms except rice are assumed to carry Multi-Peril Crop Insurance (MPCI) at the 65/100 level.

New and Updated Crop Farms, Dairies, and Ranches Since the December 2006 Baseline Update

Since publication of the December 2006 AFPC Representative Farms Baseline Update, no new representative operations have been added to the national farm set. The southeast Missouri rice farm, MOER4500, has been discontinued. The following five farms/ranches have been updated:

MTW4500	Reduced planted acreage from 2,475 to 2,330, and now uses no-till production practices.
GAC2300	Increased acreage from 1,700 to 2,300, while maintaining a similar crop mix.
TXED450	Decreased herd size from 550 head to 450 head, and increased average production to 18,000 pounds.
TXED1000	Herd size remained the same, while total acres utilized decreased to 750.
COB250	Herd size remained the same and the annual percentage cull rate decreased.

FAPRI January 2007 Baseline

Projected crop prices for FAPRI's January 2007 Baseline are summarized in Table 1. With the exceptions of wheat and rice, crop price projections are higher than they were in the December 2006 Baseline. Individual crop prices are projected to move as follows:

- Corn prices start at \$3.24/bu in 2007, reach a high of \$3.25/bu in 2009, and decline to \$3.15/bu by 2012.
- Wheat prices stay above \$4.00/bu throughout the planning horizon, ranging between \$4.07/bu and \$4.19/bu.
- Cotton prices steadily increase from \$0.5181/lb in 2007 to \$0.5819/lb by 2012.
- Rice prices start at \$8.09/cwt in 2007, and increase to a high of \$8.72/cwt by 2012.
- Sorghum prices are expected to remain relatively stable, ranging between \$2.97/bu and \$3.02/bu between 2007 and 2012.
- Soybeans are expected to range between \$6.68/bu and \$7.02/bu during the planning horizon.
- The U.S. all hay prices are expected to peak at \$109.77/ton in 2007, and stay above \$108.00/ton through 2012.

Assumed loan rates and direct payment rates are reported in Table 1, and reflect the rates authorized in the 2002 Farm Bill. All payment rates are assumed to remain constant at 2006 levels for 2007 through 2012.

Projected livestock prices and state and national milk prices for FAPRI's January 2007 Baseline are presented in Table 2. In general, beef cattle prices are projected to reach their lows in 2010, coinciding with cyclical expansion of the nation's beef cowherd. Projected price declines for feeder cattle are more severe through 2010, than they were in the December 2006 Baseline, but now stay above \$90.00/cwt throughout the planning horizon. Specifically, classes of cattle and milk prices are projected to move as follows:

- Feeder cattle prices are projected to decrease from \$109.17/cwt in 2007 to \$95.57/cwt in 2012, hitting their low of \$90.51/cwt in 2010.
- Cull cow prices start at \$47.88/cwt in 2007, decreasing to \$47.16/cwt by 2012.
- The U.S. all milk prices are projected to range from a low of \$14.21/cwt in 2007 to a high of \$14.50/cwt in 2011.

Projected annual rates of change for variable cash expenses are summarized in Table 3. The rate of change in input prices comes from FAPRI's January 2007 Baseline. Based on projections from Global Insight, annual interest rates paid for intermediate-term and long-term loans, and interest rates earned on savings are also reported in Table 3. Assumed annual rates of change in land values over the 2007-2012 period are provided by the FAPRI Baseline and are projected to range between a 2.96% and 8.34% per year.

Definitions of Variables in the Summary Tables

- **Overall Financial Position, 2007-2012** -- As a means of summarizing the representative farms' economic efficiency, liquidity, and solvency position, AFPC classifies each farm as being in either a good, marginal or poor position. AFPC assumes a farm is in a good financial position when it has less than a 25 percent chance of a negative ending cash balance and a less than 25 percent chance of losing real net worth. If the probabilities of these events are between 25 and 50 percent the farm is classified as marginal. A probability greater than 50 percent places the farm in a poor financial position.
- **Change in Real Net Worth, 2007-2012** -- Annualized percentage change in the operator's net worth from January 1, 2007 through December 31, 2012, after adjusting for inflation. This value reflects the real annualized increase or decrease in net worth or equity for the farm over the planning horizon including changes in real estate values.
- **Net Income Adjustment (NIA) to Maintain Real Net Worth, 2007-2012** -- NIA is the annual change in net cash farm income necessary to insure the farm maintains its real net worth during 2007-2012. A positive NIA indicates the additional annual net income needed to maintain real net worth. A negative NIA indicates the annual loss in net income the farm can endure and still maintain real net worth.
- **Net Income Adjustment (NIA) for Zero Ending Cash Balance in 2012** -- NIA is the loss in annual net cash farm income a farm can withstand and have a zero ending cash balance in 2012. A positive NIA indicates the annual increase in receipts necessary for a zero ending cash balance, while a negative NIA indicates the annual decrease in receipts that results in a zero ending cash balance.
- **Government Payments/Receipts, 2007-2012** -- Sum of all farm program payments (counter-cyclical, direct, and marketing loan gains/loan deficiency payments) divided by total receipts received from the market plus counter-cyclical, direct, and marketing loan gains/loan deficiency payments, crop insurance indemnities, and other farm related receipts.
- **Total Cash Receipts** -- Sum of annual cash receipts from all sources, including market sales, counter-cyclical and direct payments, marketing loan gains/loan deficiency payments, crop insurance indemnities, and other farm related receipts.
- **Government Payments** -- Sum of annual counter-cyclical payments, direct payments, and marketing loan gains/loan deficiency payments for crops and the milk income loss contract (MILC) program payment for dairy farms. Also included are lump sum disaster payments for livestock.
- **Net Cash Farm Income** -- Equals total cash receipts minus all cash expenses. Net cash farm income is used to pay family living expenses, principal payments, income taxes, self employment taxes, and machinery replacement costs. The values in the tables are the averages for each year in the planning horizon.
- **Probability of Negative Ending Cash Balance** -- Is the number of times out of 100 that the farm's ending cash reserves before borrowing are less than zero. This probability is reported for each year to indicate how the cash flow risk for the farm changes over the planning horizon.
- **Ending Cash Reserves** -- Equals total cash on hand at the end of the year. Ending cash equals beginning cash reserves plus net cash farm income and interest earned on cash reserves less principal payments, federal taxes (income and self employment), state income taxes, family living withdrawals, and actual machinery replacement costs (not depreciation).
- **Nominal Net Worth** -- Equity at the end of each year equals total assets including land minus total debt from all sources. Nominal net worth is not adjusted for inflation and averages are reported for each year in the planning horizon.
- **Probability of Decreasing Real Net Worth Over 2005-2012** -- Is the number of times out of 100 that real net worth at the end of 2012 is less than real net worth at the start of 2005.

APPENDIX A:
CHARACTERISTICS OF
REPRESENTATIVE FARMS

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING FEED GRAINS AND OILSEEDS

- IAG1350** IAG1350 is a 1,350-acre northwestern Iowa (Webster County) grain farm. The farm is moderate-sized for the region and plants 810 acres of corn and 540 acres of soybeans annually. Seventy-four percent of this farm's 2006 receipts come from corn production.
- IAG3400** This 3,400-acre large-sized grain farm is located in northwestern Iowa (Webster County). It plants 2,040 acres of corn and 1,360 acres of soybeans each year, realizing 75 percent of receipts from corn production.
- NEG1960** South central Nebraska (Dawson County) is home to this 1,960-acre grain farm. This farm plants seventy-five percent of cultivated acres to corn and fifteen percent to soybeans. Alfalfa is grown on the remaining land. The farm produces both yellow and white food-grade corn on 56 percent of the corn acres. Eighty-five percent of gross receipts are derived from corn sales.
- NEG4300** This is a 4,300-acre grain farm located in south central Nebraska (Dawson County). This operation plants 2,666 acres of corn and 1,118 acres of soybeans each year. Remaining acres are planted to alfalfa. A portion (40 percent) of the corn acreage is food-grade corn. In 2006, 79 percent of total receipts were generated from corn production.
- NDG2180** NDG2180 is a 2,180-acre, moderate-sized, south central North Dakota (Barnes County) grain farm that plants 480 acres of wheat, 300 acres of corn, and 1300 acres of soybeans. The remaining acres are enrolled in the Conservation Reserve Program. The farm generated 54 percent of 2006 receipts from soybean sales.
- NDG7500** This is a 7,500-acre, large-sized grain farm in south central North Dakota (Barnes County) that grows 3,750 acres of soybeans, 2000 acres of corn, 1,200 acres of wheat, and 300 acres of dry peas annually. The remaining acreage is enrolled in the Conservation Reserve Program. Soybean and corn sales accounted for 79% of 2006 receipts.
- MOCG2050** MOCG2050 is a 2,050-acre grain farm located in central Missouri (Carroll County) and plants 1,025 acres of corn and 1,025 acres of soybeans annually. This farm is located in the Missouri River bottom, an area with a large concentration of livestock production. This proximity allows grain producers in this area to supply feed to livestock producers at a premium to other areas of Missouri. This farm generated 66 percent of its total revenue from corn and 34 percent from soybeans during 2006.
- MOCG3630** A 3,630-acre central Missouri (Carroll County) grain farm with 1,880 acres of corn, 1,650 acres of soybeans, and 100 acres of wheat. This farm is located in the Missouri River bottom, an area with a large concentration of livestock production. This proximity allows area grain producers to supply feed to livestock producers at a premium to other areas of Missouri. Corn sales accounted for 68 percent of farm receipts and soybeans accounted for 30 percent in 2006.
- MONG1850** MONG1850 is a 1,850-acre diversified northwest Missouri grain farm centered in Nodaway County. MONG1850 plants 900 acres of corn, 900 acres of soybeans, and 200 acres of hay annually. The farm also has a 200-head cow-calf herd. Proximity to the Missouri River increases marketing options for area grain farmers due to easily accessible river grain terminals. In 2006, 51 percent of the farm's total receipts were from corn, 29 percent from soybeans, and 18 percent from cattle sales.

*Receipts for 2006 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2006 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2006 PANEL FARMS PRODUCING FEED GRAINS AND OILSEEDS (continued)

- ING1000** Shelby County, Indiana, is home to this 1,000-acre moderate-sized feedgrain farm. This farm annually plants corn and soybeans in a 50/50 rotation. Due to this farm's proximity to Indianapolis, land development pressures will likely constrain further expansion of this farm's operations. Sixty-two percent of 2006 receipts came from corn sales.
- ING2200** ING2200 is a large-sized grain farm located in east central Indiana (Shelby County). This farm plants 1,100 acres to corn and 1,100 acres to soybeans each year. In 2006, 64 percent of gross receipts were generated by corn sales.
- TXPG3760** TXPG3760 is a predominately irrigated farm located in the Texas Panhandle (Castro County). Annually, 1,344 acres are planted to corn and 1,472 acres are planted to cotton. In 2006, 44 percent of cash receipts were generated from corn sales.
- TXHG2000** This 2,000-acre grain farm is located on the Blackland Prairie of Texas (Hill County). On this farm, 1,000 acres of corn, 500 acres of sorghum, 250 acres of cotton, and 250 acres of wheat are planted annually. Feedgrain sales accounted for 71 percent of 2006 receipts with cotton accounting for 17 percent of sales. Forty beef cows live on 300 acres of improved pasture and contribute approximately five percent of total receipts.
- TXWG1400** This 1,400-acre farm is located on the Blackland Prairie of Texas (Williamson County). TXWG1400 plants 900 acres of corn, 200 acres of sorghum, 250 acres of cotton, and 50 acres of winter wheat annually. Additionally, this farm has a 50-head beef cow herd that is pastured on rented ground that cannot be farmed. Feedgrain sales accounted for 63 percent of 2006 receipts with cotton accounting for 28 percent of sales.
- TXUG1200** TXUG1200 is a grain farm located in Uvalde County, Texas. This farm plants 450 acres of corn, 200 acres of grain sorghum, 400 acres of cotton, and 150 acres of wheat each year. All crops except wheat are grown under irrigation. In 2006, feedgrain sales accounted for 44 percent of farm receipts.
- TNG900** This is a 900-acre, moderate-sized grain farm in West Tennessee (Henry County). Annually, this farm plants 500 acres of corn, 400 acres of soybeans, and 100 acres of wheat (planted before soybeans) in a region of Tennessee recognized for the high level of implementation of conservation practices by farmers. Sixty-five percent of 2006 farm receipts were from sales of corn.
- TNG2750** West Tennessee (Henry County) is home to this 2,750-acre, large-sized grain farm. Farmers in this part of Tennessee are known for their early and continued adoption of conservation practices, including widespread implementation of no-till farming. TNG2750 plants 1,100 acres of corn, 550 acres of wheat, and 1,650 acres of soybeans (550 of which are double-cropped after wheat). The farm generated 46 percent of its 2006 gross receipts from sales of corn and 38 percent from soybeans.
- SCG1500** SCG1500 is a moderate-sized, 1,500-acre grain farm in South Carolina (Clarendon County) consisting of 698 acres of dryland corn, 148 acres of irrigated corn, 654 acres of soybeans (454 acres double-cropped after wheat), and 454 acres of wheat. Fifty-one percent of the farm's receipts were realized from corn sales during 2006. This farm enjoys significant returns on double-cropped acreage, but timing does not allow for more than 454 acres.
- SCG3500** A 3,500-acre, large-sized South Carolina (Clarendon County) grain farm with 1,840 acres of corn, 900 acres of wheat, 1,260 acres of soybeans (900 double-cropped after wheat), and 400 acres of cotton. The farm generated 49 percent of 2006 receipts from corn sales and 18 percent from soybean sales, with an additional 19 percent coming from cotton sales. Timing precludes further expansion of relatively lucrative double-cropped acres.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING WHEAT

- WAW1725** This is a 1,725-acre moderate-sized grain farm in the Palouse of southeastern Washington (Whitman County). It plants 1,121 acres of wheat, 173 acres of barley, and 431 acres of dry peas. Disease concerns dictate rotating a minimum acreage of barley and peas to maintain wheat yields. This farm generated 84 percent of 2006 receipts from wheat.
- WAW5000** A 5,000-acre, large-sized grain farm in the Palouse of southeastern Washington (Whitman County). Annually, this farm allocates 2,915 acres to wheat, 233 acres to barley, and 1,293 acres to dry peas. Diseases that inhibit wheat yield dictate the rotation of a minimum acreage of barley and peas. Wheat sales accounted for 78 percent of 2006 receipts.
- WAAW3500** South central Washington (Adams County) is home to this 3,500-acre, large-sized grain farm. Annually, this farm plants 1,500 acres of wheat in a wheat-fallow rotation. Additionally, 500 acres are enrolled in a CRP contract. In 2006, wheat sales accounted for 94 percent of the farm's gross receipts.
- ORW4000** A 4,000-acre large-sized grain farm located in northeastern Oregon (Morrow County). This farm plants 1,600 acres annually in a wheat-fallow rotation, with 400 additional acres enrolled in a CRP contract. Ninety-five percent of this farm's 2006 total receipts came from wheat sales.
- MTW4500** North-central Montana (Chouteau County) is home to this 4,500 acre farm on which 2,330 acres of wheat (1,711 acres of winter wheat, 619 acres of spring wheat) are planted each year. MTW4500 uses no-till production practices. In 2006, 98 percent of cash income came from wheat.
- COW3000** A 3,000-acre northeast Colorado (Washington County), moderate-sized grain farm that plants 970 acres of winter wheat, 605 acres of millet, and 600 acres of corn each year. COW3000 has adopted minimum tillage practices on most of its acres. This farm generated 41 percent of its receipts from wheat, 21 percent from millet, and 32 percent from corn.
- COW5640** A 5,640-acre, large-sized northeast Colorado (Washington County) grain farm. It plants 1,900 acres of wheat, 1,100 acres of millet, 650 acres of corn, and 260 acres of sunflowers. During 2006, 54 percent of gross receipts came from wheat sales and 17 percent came from millet sales.
- KSCW1600** South central Kansas (Sumner County) is home to this 1,600-acre, moderate-sized grain farm. KSCW1600 plants 1,072 acres of winter wheat, 208 acres of sorghum, and 160 acres of soybeans each year. For 2006, 67 percent of gross receipts came from wheat.
- KSCW4000** A 4,000-acre, large-sized grain farm in south central Kansas (Sumner County) that plants 2,000 acres of winter wheat, 1,000 acres of sorghum, 500 acres of corn, and 500 acres of soybeans. Forty-nine percent of this farm's 2006 total receipts were generated from sales of winter wheat.
- KSNW2800** This is a 2,800-acre, moderate-sized northwest Kansas (Thomas County) grain farm. This farm plants 1400 acres of winter wheat (wheat-fallow rotation), 467 acres of corn, and 233 acres of sorghum. KSNW2800 also owns 80 head of beef cows. This farm generated 48 percent of 2006 receipts from wheat and 36 percent of its receipts from feedgrains.
- KSNW5000** KSNW5000 is a 5,000-acre, large-sized northwest Kansas (Thomas County) grain farm that annually plants 2,325 acres of winter wheat, 1,013 acres of corn, 382 acres of sorghum, and 130 acres of soybeans. This farm also runs 100 head of beef cows. The farm generated 39 percent of receipts from wheat, 53 percent from feedgrains, and eight percent from cattle during 2006.

*Receipts for 2006 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2006 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING COTTON

- TXNP3000** This is a 3,000-acre cotton farm located on the northern High Plains of Texas (Moore County). This farm plants 1,500 acres of cotton (1,200 irrigated and 300 dryland), 360 acres of irrigated corn, 240 acres of irrigated sorghum for seed production, and 600 acres of irrigated wheat annually. Fifty-five percent of total receipts are generated from cotton sales.
- TXNP7000** TXNP7000 is a large-sized cotton farm located in the northern Texas Panhandle (Moore County). This farm annually plants 2,850 acres of irrigated cotton, 1,100 acres of irrigated corn, 796 acres of sorghum (516 acres of dryland and 280 acres of irrigated production for seed), and 1,237 acres of winter wheat (720 acres irrigated and 517 acres dryland). Fifty-six percent of 2006 cash receipts were derived from cotton sales.
- TXSP2239** A 2,239-acre Texas South Plains (Dawson County) cotton farm that is moderate-sized for the area. TXSP2239 plants 1,800 acres of cotton (1,434 dryland, 366 irrigated), 60 acres of peanuts, and has 183 acres in CRP. For 2006, 89 percent of receipts came from cotton.
- TXSP3745** The Texas South Plains (Dawson County) is home to this 3,745-acre, large-sized cotton farm that grows 3,036 acres of cotton (2,406 dryland, 630 irrigated), 120 acres of peanuts, and has 288 acres in CRP. Cotton sales comprised 85 percent of 2006 receipts.
- TXPC2500** The Texas Panhandle is home to this 2,500-acre farm (Deaf Smith County). Annually, cotton is planted on 1,367 acres (1,000 irrigated and 367 dryland), 758 acres planted to wheat (700 irrigated and 58 dryland), and 250 irrigated acres are planted to corn. Fifty-nine percent of 2006 cash receipts were generated by cotton sales.
- TXEC5000** This 5,000-acre farm is located on the Eastern Caprock of the Texas South Plains (Crosby County). Annually, 3,800 acres are planted to cotton (2,800 irrigated and 1,000 dryland), 400 acres of wheat (100 irrigated and 300 dryland), and 300 acres of dryland sorghum. In 2006, cotton sales accounted for 96 percent of gross receipts.
- TXRP2500** TXRP2500 is a 2,500-acre cotton farm located in the Rolling Plains of Texas (Jones County). This farm plants 1,117 acres of cotton and 825 acres of winter wheat each year. The area is limited by rainfall, and the farm uses a conservative level of inputs. Seventy-seven percent of 2006 farm receipts came from cotton sales. Seventeen head of beef cows generated three percent of farm receipts.
- TXMC1800** This 1,800-acre cotton farm is located on the Coastal Plain of southeast Texas (Wharton County). TXMC1800 farms 900 acres of cotton and 450 acres each of sorghum and corn. In 2006, cotton sales comprised 66 percent of total cash receipts on this operation.
- TXCB2250** A 2,250-acre cotton farm located on the Texas Coastal Bend (San Patricio County) that farms 1,350 acres of cotton, 675 acres of sorghum, and 225 acres of corn annually. Seventy-five percent of 2006 cash receipts were generated by cotton.
- TXCB5500** Nueces County, Texas is home to this 5,500-acre farm. Annually, 2,750 acres are planted to cotton and 2,750 acres to sorghum. Cotton sales accounted for 68 percent of 2006 receipts.
- TXVC4500** This 4,500-acre farm is located in the lower Rio Grande Valley of Texas (Willacy County) and plants 2,388 acres to cotton (500 irrigated and 1,888 acres dryland), 1,887 acres to sorghum, and 225 acres of sugarcane. In 2006, 58 percent of TXVC4500's cash receipts were generated by cotton sales.

*Receipts for 2006 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2006 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING COTTON (continued)

- CAC4000** A 4,000-acre cotton farm located in Kings County, California, CAC4000 plants 2,000 acres to cotton, 1,000 acres to vegetables, 700 acres to hay and silage, and harvests 300 acres of almonds. Forty-six percent of 2006 receipts came from cotton sales.
- LAC2640** This is a 2,640-acre cotton farm located in north Louisiana (Morehouse Parish). LAC2640 plants 924 acres of cotton, 1,056 acres of corn, and 660 acres of soybeans each year. During 2006, 53 percent of farm receipts were generated from cotton sales.
- ARC6000** ARC6000 is a 6,000-acre cotton farm in southeast Arkansas (Desha County) that plants 2,000 acres of cotton, 2,000 acres of rice, 1,500 acres of soybeans, and 500 acres of sorghum. For 2006, 46 percent of gross receipts came from cotton sales, 39 percent from rice sales, and 10 percent from soybean sales.
- ARNC5000** Far northeast Arkansas (Mississippi County) is home to this 5,000-acre cotton farm. ARNC5000 plants all its acres to cotton annually, generating 100 percent of its receipts from cotton.
- TNC1900** A 1,900-acre, moderate-sized West Tennessee (Fayette County) cotton farm. TNC1900 consists of 990 acres of cotton, 440 acres each of soybeans and corn, and 30 acres enrolled in CRP. Cotton accounted for 72 percent of 2006 gross receipts, with corn and soybeans contributing 18 percent and ten percent, respectively.
- TNC4050** TNC4050 is a 4,050-acre, large-sized West Tennessee (Haywood County) cotton farm. This farm plants 2,670 acres of cotton, 820 acres of soybeans, 560 acres of corn, and 328 acres of wheat each year. During 2006, cotton sales generated 78 percent of gross receipts.
- ALC3000** A 3,000-acre cotton farm located in northern Alabama (Lawrence County) that plants 2,100 acres to cotton, 750 acres to corn, and 150 acres to soybeans annually. This farm was early to adopt no-till cropping practices. Cotton sales accounted for 80 percent of total farm receipts during 2006.
- GAC2300** Southwest Georgia (Decatur County) is home to a 2,300-acre cotton farm that plants 1,495 acres to cotton, 575 acres to peanuts, and 230 acres to soybeans. This farm was added during 2001 to represent resurgent cotton production in the Deep South. In 2006, farm receipts were comprised largely of cotton sales (64 percent) and peanut sales (30 percent).
- NCC1100** This is a 1,100-acre cotton farm located on the upper coastal plain of North Carolina (Wayne County). NCC1100 plants 700 acres of cotton, 110 acres of wheat, and 400 acres of soybeans (110 acres of which are double-cropped) annually. Cotton accounted for 74 percent of this farm's 2006 receipts with 13 percent coming from soybean sales.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING RICE

- CAR550** CAR550 is a 550-acre moderate-sized rice farm in the Sacramento Valley of California (Sutter and Yuba Counties) that plants 500 acres of rice annually. This farm generated 90 percent of 2006 gross receipts from rice sales.
- CAR2365** This is a 2,365-acre rice farm located in the Sacramento Valley of California (Sutter and Yuba Counties) that is large-sized for the region. CAR2365 plants 2,240 acres of rice annually. Ninety-eight percent of 2006's total receipts were generated from rice sales.
- CABR1100** The Sacramento Valley (Butte County) is home to CABR1100, a 1,100-acre rice farm. CABR1100 harvests 1,000 acres of rice annually, generating 100 percent of 2006 farm receipts from rice sales.
- CACR715** CACR715 is a 715-acre rice farm located in the Sacramento Valley of California (Colusa County). This farm harvests 650 acres of rice each year. During 2006, 99 percent of farm receipts were realized from rice sales.
- TXR1350** This 1,350-acre rice farm located west of Houston, Texas (Colorado County) is moderate-sized for the region. TXR1350 harvests 450 acres of first-crop rice and 405 acres of ratoon rice. The farm generated 98 percent of its receipts from rice during 2006.
- TXR2400** TXR2400 is a 2,400-acre, large-sized rice farm located west of Houston, Texas (Colorado County). This farm harvests 1,200 acres of first-crop rice and 1,080 acres of ratoon rice annually. TXR2400 realized 99 percent of 2006 gross receipts from rice sales.
- TXBR1800** The Texas Gulf Coast (Matagorda County) is home to this 1,800-acre rice farm. TXBR1800 harvests 1,200 acres of rice annually (600 acres of first-crop rice and 600 acres of ratoon rice) and realized 100 percent of 2006 farm receipts from rice sales.
- TXER3200** This 3,200-acre rice farm is large for the Texas Gulf Coast (Wharton County). TXER3200 harvests 1,280 acres of first-crop rice and 960 acres of ratoon rice each year. The farm also grows 160 acres each of soybeans and grain sorghum annually. Ninety-five percent of 2006 receipts came from rice sales.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING RICE (continued)

- LASR1200** A 1,200-acre southwest Louisiana (Acadia, Jeff Davis, and Vermilion parishes) rice farm, LASR1200 is moderate-sized for the area. This farm harvests 660 acres of rice and 250 acres of soybeans. During 2006, 85 percent of gross receipts were generated from rice sales.
- LANR2500** This is a 2,500-acre, large-sized northeast Louisiana (Madison Parish) rice farm. This farm harvests 1,000 acres of rice, 800 acres of soybeans, 325 acres of cotton, and 250 acres of corn. For 2006, 57 percent of farm receipts came from rice, 14 percent from soybeans, and 17 percent from cotton.
- MOWR4000** A 4,000-acre rice farm located in southeast Missouri (Butler County), MOWR4000 is large-sized for the region. Annually, this farm plants 2,000 acres of rice and 2,000 acres of soybeans. Seventy-one percent of receipts for this farm came from rice sales in 2006.
- ARSR3640** ARSR3640 is a 3,640-acre, large-sized Arkansas (Arkansas County) rice farm that harvests 1,620 acres of rice, 1,620 acres of soybeans, and 324 acres of wheat each year. Sixty-five percent of this farm's 2006 receipts came from rice sales.
- ARWR1200** East central Arkansas (Cross County) is home to this 1,200-acre rice farm. Moderate-sized for the region, ARWR1200 annually plants 600 acres to rice, 600 acres to soybeans, and 60 acres of double-cropped wheat. During 2006, rice sales generated 71 percent of gross receipts.
- ARHR3000** ARHR3000 is a 3,000-acre large-sized northeast Arkansas (Lawrence County) rice farm that annually harvests 1,750 acres of rice and 1,250 acres of soybeans. Rice sales accounted for 81 percent of 2006 farm receipts.

*Receipts for 2006 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2006 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK

- CAD1710** A 1,710-cow, large-sized central California (Tulare County) dairy. The farm plants 1,100 acres of hay/silage for which it employs custom harvesting. Milk sales generated 91 percent of 2006 total receipts.
- NMD2125** A 2,125 cow, large-sized southern New Mexico (Dona Ana and Chaves Counties) dairy. This farm purchases all commodities necessary for blending its own total mixed ration and plants no crops. Milk sales accounted for 91 percent of 2006 total receipts.
- WAD250** A 250-cow, moderate-sized northern Washington (Whatcom County) dairy. This farm plants 200 acres of silage and generated 88 percent of its 2006 gross receipts from milk sales.
- WAD850** An 850-cow, large-sized northern Washington (Whatcom County) dairy. This farm plants 605 acres for silage annually. During 2006, 93 percent of this farm's gross receipts came from milk.
- IDD1000** A 1,000-cow, moderate-sized Idaho (Twin Falls County) dairy. This farm plants no crops. Milk sales accounted for 88 percent of IDD1000's gross receipts for 2006.
- IDD3000** A 3,000-cow, large-sized Idaho (Twin Falls County) dairy. This farm plants 2,000 acres for silage annually. Milk sales represent 91 percent of this farm's gross receipts.
- TXND3000** A 3,000-cow, large-sized dairy located in the South Plains of Texas (Bailey County). This farm plants 180 acres of sorghum for silage annually. Milk sales account for 90 percent of 2006 gross receipts.
- TXCD550** A 550-cow, moderate-sized central Texas (Erath County) dairy. TXCD550 plants 500 acres of hay each year. Milk sales represented 90 percent of this farm's 2006 gross receipts.
- TXCD1300** A 1,300-cow, large-sized central Texas (Erath County) dairy. TXCD1300 plants 400 acres of silage annually. During 2006, milk sales accounted for 91 percent of receipts.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK (continued)

- TXED450** A 450-cow, moderate-sized northeast Texas (Hopkins County) dairy. This farm has 850 acres of improved pasture and 50 acres of hay. During 2006, milk sales represented 87 percent of annual receipts.
- TXED1000** A 1,000-cow, large-sized northeast Texas (Hopkins County) dairy. This farm plants 1,025 acres of hay/silage. This farm generated 93 percent of 2006 receipts from milk sales.
- WID145** A 145-cow, moderate-sized eastern Wisconsin (Winnebago County) dairy. The farm plants 237 acres of silage, 60 acres for hay, 184 acres of corn, and 99 acres of soybeans. Milk constituted 87 percent of this farm's 2006 receipts.
- WID775** A 775-cow, large-sized eastern Wisconsin (Winnebago County) dairy. The farm plants 696 acres of hay and 454 acres of silage each year. Milk sales comprised 92 percent of the farm's 2006 receipts.
- NYWD800** An 800-cow, moderate-sized western New York (Wyoming County) dairy. This farm plants 690 acres of silage and 750 acres of haylage annually. Milk sales accounted for 92 percent of the gross receipts for this farm in 2006.
- NYWD1200** A 1,200-cow, large-sized western New York (Wyoming County) dairy. This farm plants 2,160 acres for silage annually. Milk sales accounted for 92 percent of the gross receipts for this farm in 2006.
- NYCD110** A 110-cow, moderate-sized central New York (Cayuga County) dairy. The farm plants 80 acres for hay, 64 acres for corn, and 131 acres for silage annually. Milk accounted for 86 percent of the gross receipts for 2006 on this dairy.
- NYCD500** A 500-cow, large-sized central New York (Cayuga County) dairy. This farm plants 714 acres of hay and haylage and 386 acres of silage. Milk sales make up 92 percent of the 2006 total receipts for this dairy.

2006 CHARACTERISTICS OF PANEL FARMS PRODUCING MILK (continued)

- VTD140** A 140-cow, moderate-sized Vermont (Washington County) dairy. VTD140 plants 30 acres of hay, and 190 acres of silage annually. Milk accounted for 85 percent of the 2006 receipts for this farm.
- VTD400** A 400-cow, large-sized Vermont (Washington County) dairy. This farm plants 100 acres of hay and 900 acres of silage annually. Milk sales represent 88 percent of VTD400's gross receipts in 2006.
- MOD85** An 85-cow, moderate-sized southwest Missouri (Christian County) dairy. The farm plants 190 acres of hay and 32 acres of silage. Milk accounted for 82 percent of gross farm receipts for 2006.
- MOD400** A 400-cow, large-sized southwest Missouri (Dade County) dairy. The farm plants 315 acres of hay, 135 acres of silage, and 150 acres of improved pasture annually. Milk accounted for 92 percent of gross farm receipts for 2006.
- FLND550** A 550-cow, moderate-sized north Florida (Lafayette County) dairy. The dairy grows 130 acres of hay each year. All other feed requirements are purchased in a pre-mixed ration. Milk sales accounted for 92 percent of the farm receipts.
- FLSD1500** A 1,500-cow, large-sized south central Florida (Okeechobee County) dairy. FLSD1500 plants 100 acres of hay and 400 acres of silage annually. Milk sales represent 94 percent of 2006 total receipts.

*Receipts for 2006 are included to indicate the relative importance of each enterprise to the farm. Percents indicate the percentage of the total receipts accounted for by the livestock categories and the crops.

**Acreages for 2006 are included to indicate the relative importance of each enterprise to the farm. Total planted acreage may exceed total cropland available due to double cropping. Percents indicate the percentage of total planted acreage accounted for by the crop.

2006 CHARACTERISTICS OF PANEL RANCHES PRODUCING BEEF CATTLE

- CAB500** Located in the northern Sacramento Valley (Tehama County, California), this 500-cow operation covers 13,125 acres of deeded and privately owned leased range. Additionally, 2,000 AUMs are leased from the BLM. All 2006 receipts were generated by the cow-calf operation.
- NVB700** NVB700 is a 700-cow ranch located in northeastern Nevada (Elko County). The operation consists of 1,300 acres of owned hay meadow and 8,725 acres of owned range, supplemented by 4,450 AUMs leased from the U.S. Forest Service. Each year, the ranch harvests 975 acres of hay. Annually, cattle sales represent all of the ranch's receipts.
- MTB500** A 500-cow ranch located on the eastern plains of Montana (Custer County), MTB500 runs cows on a combination of owned land and land leased from federal, state, and private sources. Federal land satisfies one quarter of total grazing needs. The ranch owns 14,000 acres of pasture. 640 acres of hay are produced annually on the owned land. Also, all deeded acres are leased for hunting. Cattle sales represented 98 percent of this ranch's 2006 receipts.
- WYB335** This 335-cow ranch is located in north central Wyoming (Washakie County). The herd size was reduced from 500 head, in response to persisting (8 year) drought conditions. The ranch leases 2000 AUMs from the U.S. Forest Service and owns 1,000 acres of range. In response to drought, the ranch has begun leasing 700 acres of private pasture. Annually, the ranch harvests 305 acres of alfalfa and grass hay on owned ground. The ranch backgrounds two-thirds of its calves for ninety days. In 2006, cattle sales accounted for 81 percent of gross receipts, while hay sales accounted for 17 percent.
- COB250** This 250-cow ranch is located in northwestern Colorado (Routt County). Federal land provides seven percent of the ranch's grazing needs. The ranch owns 2,300 acres of rangeland, and the cattle graze federal land during the summer. COB250 harvests 450 acres of hay each year at a projected yield of 2.5 tons per acre. The ranch sold 350 tons of meadow hay in 2006. Cattle sales accounted for 68 percent of the ranch's 2006 total receipts.
- NMB240** NMB240 is a 240-cow ranch located in northeastern New Mexico (Union County). In 2002, this ranch liquidated 20 percent of its mature cowherd in response to oppressive drought, culling 60 of its 300. With improving range conditions, ranchers have opted to fill the gap with summer stockers. Accordingly, 200 summer stocker steers were added to this ranch. During 2006, 97 percent of gross receipts were derived from cattle sales with the balance of receipts generated from fee hunting.

2006 CHARACTERISTICS OF PANEL RANCHES PRODUCING BEEF CATTLE (continued)

- SDB450** SDB450 is a 450-cow West River (Meade County, South Dakota) beef cattle ranch. This operation produces hay and oats on 1,150 acres of owned cropland, and runs its cows on 6,700 acres of owned native range. Grazing needs are supplemented with 2,100 AUMs leased from federal and state sources. In 2006, calf and culled cow/bull sales accounted for 90 percent of gross receipts.
- MOB240** A 240-cow beef cattle operation is the focal point of this diversified livestock and crop farm located in southwest Missouri (Dade County). MOB240 plants 100 acres of corn, 24 acres of sorghum, 58 acres of wheat, 116 acres of soybeans, and 560 acres of hay. During 2006, cattle sales comprised 64 percent of gross receipts.
- MOCB400** MOCB400 is a 400-cow beef cattle farm located in central Missouri (Dent County). This farm consists of 1,060 acres of owned ground and 500 acres of leased ground. Annually, 410 acres of hay are harvested on owned land. 2006 cattle sales represented 97 percent of MOCB350's cash receipts.
- TXRB500** The western Rolling Plains of Texas (King County) is home to this 500-head cow-calf operation. This ranch operates on 20,000 acres (half owned, half leased) of native range. After weaning, calves are placed on wheat pasture and then either sold as feeder cattle or retained as replacement females. Seventy-nine percent of 2006 receipts came from cattle sales, while 21 percent came from fee hunting.
- TXSB175** A 175-head cow-calf operation is the central focus of this full-time agricultural operation in south central Texas (Gonzales County). Faced with continued drought, the ranch liquidated 30% of its mature cowherd in 2006, hence expects a decreased calf crop in 2007. The arid conditions also prompted the ranch to wean calves light in early 2006. Contract broiler production is an important source of agricultural revenue for this ranch; even so, cattle sales accounted for 83 percent of 2006 gross receipts.
- FLB1155** This is a 1,155-cow ranch located in central Florida (Osceola County). FLB1155 runs cows on 5,400 acres of owned improved pasture, from which 3,560 acres of hay are harvested annually. Sales of sod are a burgeoning source of agricultural income for area ranches. During 2006, cattle sales represented 90 percent of total receipts.
- OTHERS** Six other representative farms have beef cattle operations along with their crop production (MONG1850, TXHG2000, TXWG1400, KSNW2800, KSNW5000, and TXRP2500). These farming operations have from 17 to 200 cows. Cattle contributed from three to 18 percent of gross receipts for these farms in 2006.
