#### **Modeling the Crop Insurance Industry Portfolio Gains and Losses**

**Economics and Management of Risk in Agriculture and Natural Resources Annual Meeting** 

Oscar Vegara, Gerhard Zuba, and Jack Seaquist

**Gulf Shores, Alabama** March 13-15, 2008 www.air-worldwide.com

BETTER DECISIONS

## **Agenda**

- About AIR
- Weather-based yield model
- □ Agricultural portfolio loss model
- □ Applications for crop insurance/reinsurance

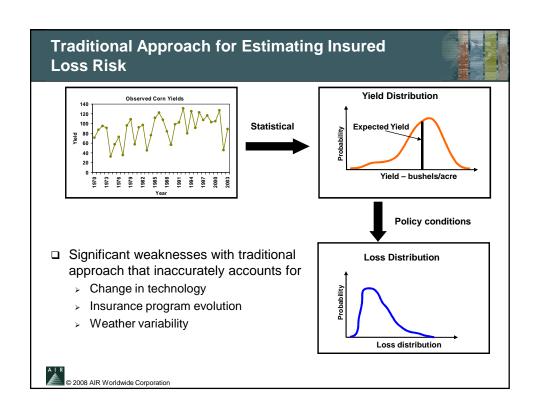

© 2008 AIR Worldwide Corporation

#### **About AIR**

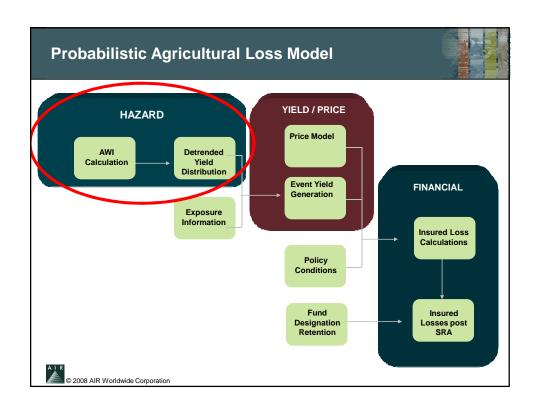

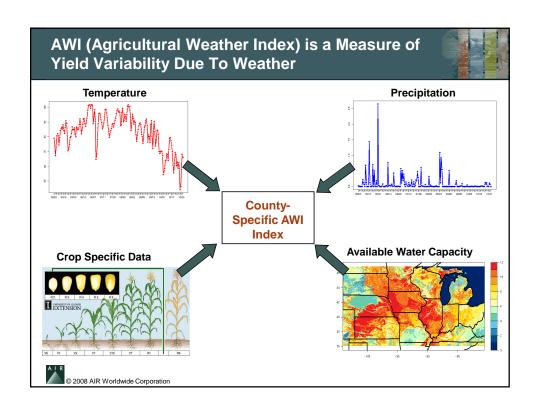

- □ AIR was founded in 1987 as the first catastrophe modeling company
- □ Pioneered the development and application of probabilistic catastrophe loss estimation methodology that is now the standard technology for global risk assessment and management
- □ AIR models and software systems cover natural hazards in more than 50 countries, as well as terrorism in the U.S.
- □ Advanced scientific techniques help clients assess and manage catastrophe, weather and climate risk
  - > Over 400 insurer, reinsurer, intermediary, and corporate risk manager clients
  - Research-oriented clients include Earthquake Engineering Research Institute, Pacific Earthquake Engineering Research Center, Los Alamos National Labs
  - > Government clients include USDA, USGS, US Dept. of Homeland Security
- □ Offices in Boston, San Francisco, London, Hyderabad, Munich and Beijing
- □ AIR is a wholly owned subsidiary of Insurance Services Office (ISO)

## **Summary**

- ☐ Traditional approaches for estimating insured crop loss need to account for changes in technology, insurance program evolution and, most significantly, weather variability
- ☐ A weather-based agricultural loss model based on a fully probabilistic yield catalog can take into account the spatial and temporal correlations of crop yields
- □ Leading reinsurers are using this model for pricing programs and for quantifying their portfolio risk
- □ Crop insurance companies are using this model for improved fund allocation
