A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Role of Economics in Pathogen Control Regulations

Daniel Engeljohn, Ph.D. Office of Policy, Program, and Employee Development Food Safety and Inspection Service, USDA

> ERS Conference – November 16, 2007 Washington, DC

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

FSIS Activity

In FY06

- ~ 7,600 full-time inspectors
- ~ 5,921 processing establishments inspected daily
- ~ 1,100 slaughter establishments in which <u>every</u> animal inspected
- ~ 140 million head of livestock; <u>9.3 billion poultry</u> <u>carcasses</u>; 4.4 billion pounds of liquid egg product
- ~ 8 million inspection procedures annually

 ~ 3.9 billion pounds of meat and poultry and ~ 5.9 million pounds of liquid egg products presented for import inspection

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

FSIS Inspection Systems

- Traditional system (beginning 1906)
 - Regulatory enforcement
 - Animal disease
 - In-plant focus of sanitary operations
- HACCP system (beginning 1996)
 - Food safety hazard control
 - Prevent, eliminate, reduce biological, chemical, and physical hazards reasonably likely to occur

Risk-based system (evolving beyond HACCP - 2006)

- Focus on risk of product and the degree of control of risk
- Conducting inspection in a manner designed to measurably impact public health and effectively use inspection resources

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Inspection System Design

- Microbiological data, in the form of verification testing results for each establishment, supplement on-site observations and give a perspective on compliance with regulatory requirements over time
- Changes in the % positive rate serve as an early warning of systemic problems arising, tracked quarterly and annually
- Public health assumption is that a reduction in the % positive rate of product containing pathogens of public health concern <u>should</u> result in a reduction on disease incidence in humans

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Healthy People 2010 Objectives

Campylobacter infections*:

<u>1997 Baseline</u>	2010 Target
24.6	12.3

Escherichia coli O157:H7 infections*: <u>1997 Baseline</u> 2.1 <u>1.0</u>

Listeria monocytogenes infections*:

<u>1997 Baseline</u> 0.5 2010 Target** 0.25

Salmonella infections*:

<u>1997 Baseline</u> 13.7 2010 Target

6.8

*Laboratory confirmed cases/100,000 humans (FoodNet)

** Changed to year 2005 by E.O. (President Clinton)

Food Safety concerns – Salmonella

- CDC estimates 1.4 million cases of foodborne illness annually
- For 2006, CDC estimated the Salmonella incidence at 14.81 cases per 100,000 population (2010 goal of 6.8 cases per 100,000)
 - S. Typhimurium decreased significantly from baseline (MMWR 56(14): 337)

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

FSIS Public Health Driven Program

 Salmonella verification sampling program for raw product (>/= 90% Category 1 target by 2010 – i.e., at half the current standard

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

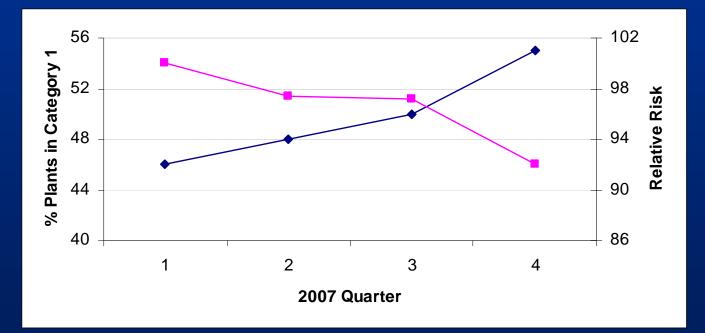

Salmonella Categories

<u>Set History</u>		
<u>Previous</u>	<u>Current</u>	Category
< 50% of standard	< 50% of standard	1
 No prior set >50% Above standard 	\leq 50% of standard	
Any result	> 50% of standard without failing	2
Any result	Exceeded standard	3

71 FR 9772; February 27, 2006

Predicted Public Health Benefits – Salmonella on Broiler Carcasses

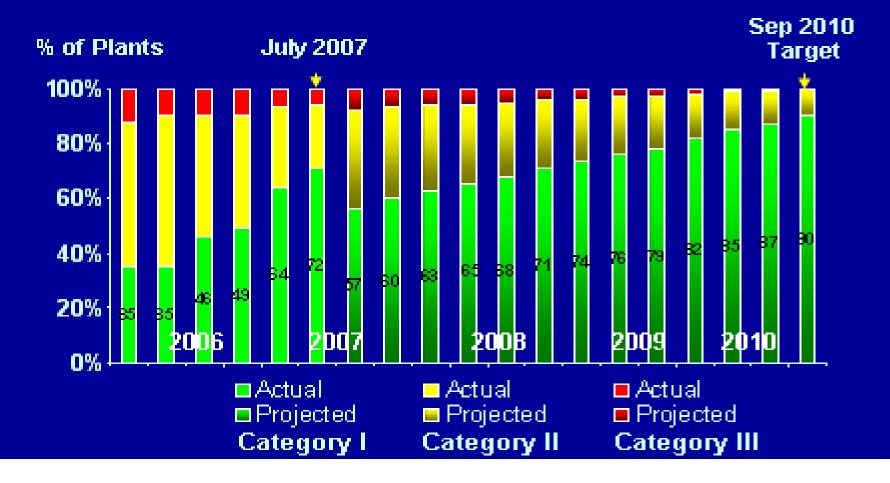

As the proportion of establishments in Category 1 increases (blue line), the relative risk of illness from *Salmonella* on broiler carcasses decreases (pink line)

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Program effectiveness: Categorization of broiler establishments

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Category 1 Update – November 2007

• Broilers

•73.5% (up from ~35% in 1st Qtr CY2006 when first tracked)

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

FSIS % Positive Rate

Source	Raw Product Salmonella	Raw Product Salmonella
	Baseline	3rd Quarter CY2007
Broilers	20.0%	10.6%
Cow/Bulls	2.7%	1.3%
Ground Beef	7.5%	4.1%
Ground Chicken	44.6%	28.3%
Ground Turkey	49.9%	16.3%
Market Hogs	8.7%	3.0%
Steers/Heifers	1.0%	0.2%
Turkeys	19.6%	9.4%

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Long Term Focus on *Salmonella* and <u>Campylobacter</u>

- 1. Looking at primal/sub-primal and other parts of raw products in Federal establishments regarding new performance standards based on current baseline studies
- 2. Looking at carcasses and parts at <u>retail</u>, particularly poultry, and association between the type and enumerative level of these pathogens at slaughter, further processing, and <u>retail</u>

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

How Economics Impact Risk Management

- Risk assessment for *Salmonella* and *Campylobacter* bacteria
 - Prevalence and serotype informs FSIS' selection of alternative risk management actions listed in an index for successive analysis of each alternative action
 - Establishments select interventions, based on a risk assessment
 - Interventions would effect supply chain; shift the supply curves of affected establishments because of net changes in costs and quantities of young chickens produced
 - Public health benefits of the reduction of the targeted microbes and the net dollar cost of the interventions for the targeted reduction of bacteria would be used for the computation of the benefit-cost and cost effectiveness analysis of each of the proposed risk management actions
 - The results would be a ranking of the cost-effectiveness ratios and the benefit-cost ratios of the risk management actions

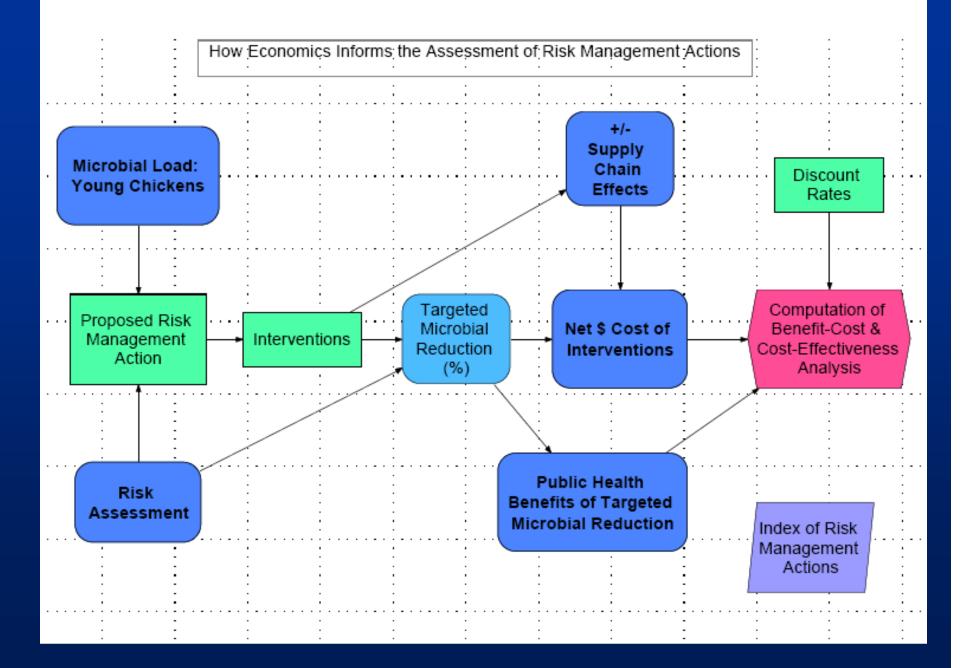

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

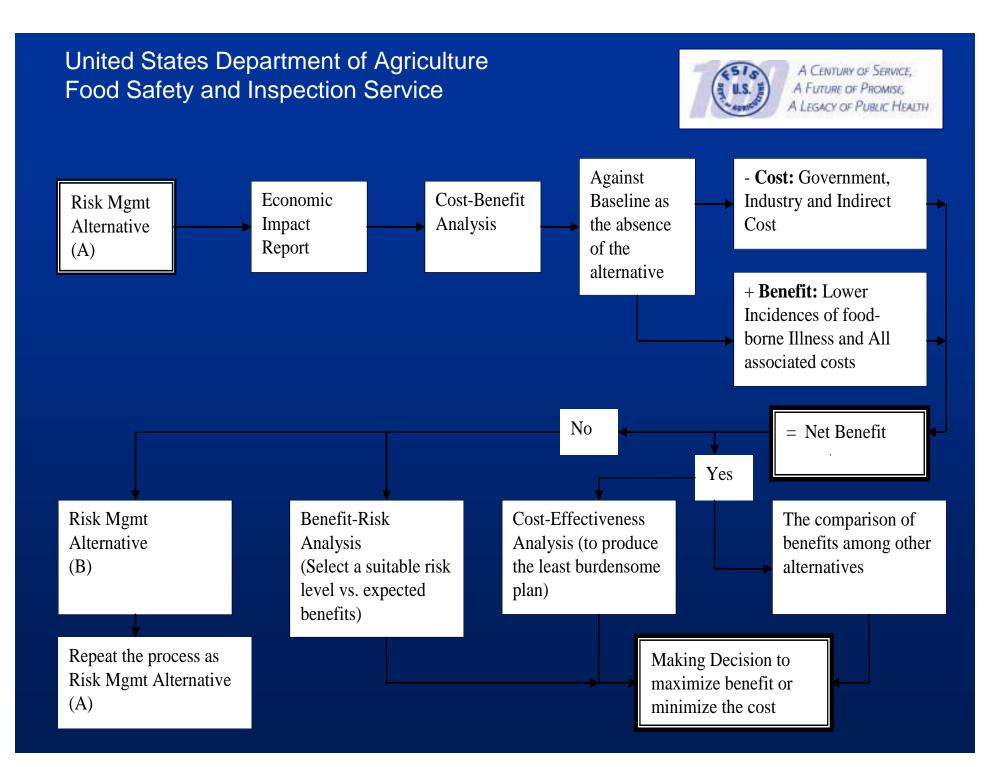

Impact Considerations

Producer

- Large, small, very small establishments
- Establishments that also slaughter other poultry
- Effect on new hires and training
- Facility and equipment modifications/purchase
- Adding inspection stations
- Evisceration linespeed
- Dressing performance standards
- HACCP plan/Sanitation SOP modifications
- Consumer food safety vs other (e.g., bruises)
- FSIS inspection training

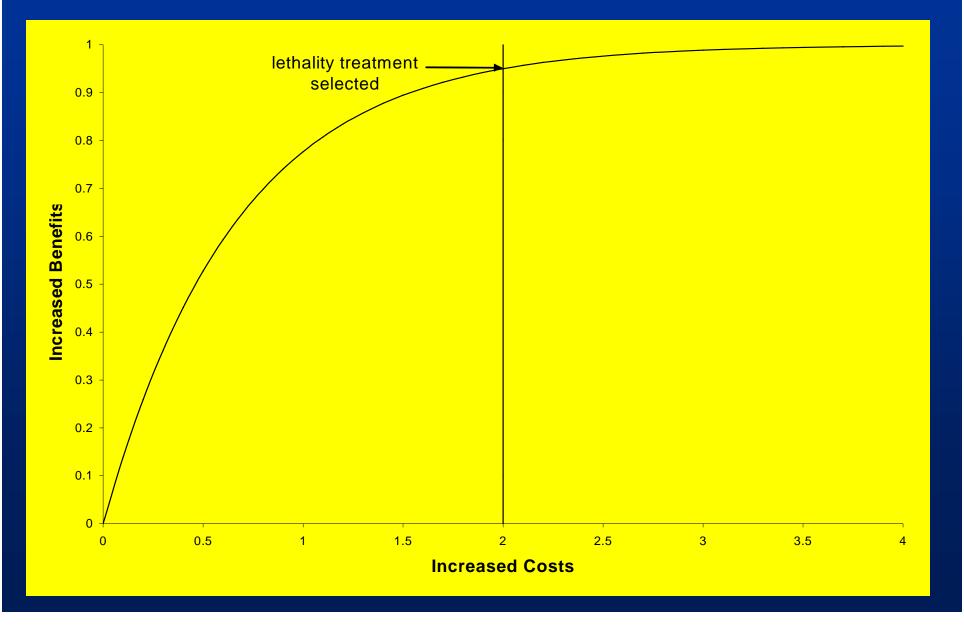

In - Influence Diagram for Regulatory Impact Analysis of Public Health-Based Slaughter Inspection Systems - How economics informs the assessment of Risk Management Ad

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Economic Analysis for RTE Listeria monocytogenes

- Benefit-cost Analysis
 compares:
 - cost of the rule to industry, and
 - Monetized health benefit
- Cost-effectiveness estimates:
 - Cost per QALY saved
 - Cost per death averted
 - Cost per life-year saved
 - Net cost per QALY
- Risk assessment model estimates averted death and illnesses
- FSIS analyses policy alternatives by changing parameters in risk assessment model <u>and</u> the cost items

A CENTURY OF SERVICE, A FUTURE OF PROMISE, A LEGACY OF PUBLIC HEALTH

Dynamic Simulation Model

Lm Risk Assessment

In plant component

Contamination event

Intervention

Contamination at retail

Risk of illness component

Retail to table exposure assessment Contamination at retail + Lm growth)

Dose-response relationship

of illnesses and death
