INTRODUCTION

The Departments of Agricultural Economics and Agricultural Education, the West Central School and Station and the Agricultural Extension Service of the Eniversity of Minnesota are cooperating with the Vocational Division, M. nnesota Department of Education in maintaining a farm management service. The service was initiated during 1952 and is available to farmers who are enrolled in adult or young farmer classes in the public schools.

The purpose of the project as far as the schools are concerned is (1) to give assistance to the instructors in the mechanics of keeping farm records and (2) to aid in the analysis of the farm business through the use of records as a basis for vocational guidance. The enrollment is on a voluntary basis insofar as the number of schools participating and the number of farmers enrolled in the service.

The analysis of the records and the preparation of the reports for West Central Minnesota are handled by Ralph Smith of the West Central School and Experiment Station at Morris. The project is under the general direction of T. R. Nodland and G. A. Pond of the University of Minnesota Department of Agricultural Education was represented by M. J. Peterson and the gricultural Extension Service by E. Hartmans. The State Department of Education was represented by G. R. Cochran, State Supervisor of Agricultural Education.

Each farmer pays an annual fee which covers a portion of the cost. Through a grant of funds from the Hill Family Foundation, Lauren Granger was employed by the Department of Agricultural Education as a co-ordinator for the project. The balance of the costs were defrayed by the University of Minnesota.

This report deals with farmers enrolled in 7 schools in West Central Minnesota. The following tabulation shows by schools the number of 1957 farm records submitted:

SCHOOL	No. 7	of Records	INSTRUCTOR
Alberta Alexandria Canby Cyrus Dawson Madison Morris Sacred Heart	9 4 2 1 3 2		Howard Johnson Bernard Sonstegard Dwaine Englund Donald Walker Donald Briggs Dwight Quam Ralph Smith Earl Northouse

The records kept included farm inventories, cash receipts and expense, feed consumed by the various classes of livestock, family living secured from the farm, household and personal expenses and receipts and the operator's liabilities and assets other than farm capital. All types of tenure arrangements are represented ranging from full owners to partnerships in which the operator furnishes little or no capital.

FARM INVENTORIES

The capital investment per farm varied from \$21,612 to \$120,942. The average investment for all farms included this report and for the one-fourth high and the one-fourth low in operator's labor earnings is shown in Table 1.

Landlords or partners supplied some capital in 17 out of the 25 cases included in this report. The landlord's investment has been included in Table 1 in order to show the total amount used per farm.

FARM EARNINGS

Operator's earnings is a measure of the relative financial success of a farmer as compared with other farmers and represents the returns above all farm expenses and a charge for the use of farm capital. For purposes of comparison, the earnings are presented on a full-owner basis.

There are two methods of computing operator's earnings. Table 2 shows the earnings statement on a cash basis and Table 3 shows the earnings on an enterprise or accrual basis. The principal difference in the two statements is in the method of handling the net increase or decrease in the value of farm capital. In the cash statement the net increase or decrease in farm capital is entered as one item. In the enterprise statement the net change in the inventory has been included in each enterprise in order to compute "total returns and net increases", or "total expenses and net decreases" by enterprises.

Table 1. Summary of Farm Inventories, 1957*

^{*}Cash receipts and expenses are adjusted for changes in inventory for each enterprise and for each item of expense in order to show total receipts and net increases, and total expenses and net decreases. The operator's earnings are the same as those on page 4.

FAMILY LIVING FROM THE FARM

The family living from the farm is the estimated value of the farm produce used in the house furnished the farmer and his family by the farm. It is a part of the income of the farm and a part of the expenses of operating the household even though cash transactions are not involved. The omission of the farm produce used in the home results in an incomplete record of both farm income and personal income.

The value of the family living as shown in Table 4 amounts to 1.2 percent of the total farm receipts on these farms. The values assigned are a conservative market price on the farm. If these products had been purchased, the amount paid out would have been considerably higher.

HOUSEHOLD AND PERSONAL EXPENSES AND RECEIPTS

Household and personal accounts are important if the family is to manage its financial affairs wisely. The household and personal expenses and receipts are presented in Table 5. These farmers spent an average of \$255 per month for family living in addition to the food, fuel and housing furnished by the farm.

NET WORTH

A net worth statement includes a listing of all the assets and liabilities as of a given date. The difference between the farmer's total assets and his liabilities is his net worth. A net worth statement for owners, part owners and renters is presented in Table 6. Both the farm and personal assets and liabilities are included.

The difference between the operator's net worth at the beginning and at the end of the year shows the gain in net worth. It represents the financial process that has been made during the year.

RETURNS TO CAPITAL AND FAMILY LABOR

The return to capital and family labor represents the amount available to the operator for living expenses, payment on indebtedness, and savings. The landlord's expenses and receipts are not included.

The average return to capital and family labor for 5 owners, 9 part owners, and 4 renters is shown in Table 7. The statement includes only the operator's share of the earnings of the partnership. The earnings as shown in Table 7 are on an actual basis as compared to the full-owner basis in Tables 2 and 3.

RANGE IN EARNINGS

From study of farm earnings shows a wide variation in earnings among farmers in a given year (figure 1). The average operator's earnings of those farmers ranking in the upper 33 percent of the range according to earnings was\$3592 and of those in the lower 33 percent was \$-529. This is a range of \$4121 between the average earnings of these two groups. Some of the causes for these differences in earnings, such as weather, may be beyond the control of the individual farmer. Other factors are within his control. The more important management factors affecting earnings are as follows: (These factors vary from year to year in their relative influence on earnings)*

- l. Crop Yields
- 2. Choice of Crops
- 3. Return from Livestock
- 4. Amount of L vestock

- 5. Size of business
- 6. Work Units per Worker
- 7. Control over Expenses

Operator:s Earnings

EXPLANATION OF "WORK UNITS"

The total "work units" for any one farm is a measure of the size of that farm business. A work unit as used in this report is the average accomplishment of a farm worker, in a ten hour day, working on crops and productive livestock at an average efficiency or ten hours of work off the farm for pay. The number of work units for each class of livestock and each acre of crop are presented in Table 8.

Table 8. Number of Work Units for Each Class of Livestock and Each Acre of Crop

Item	No. of work units	Item	No. of work units
Dairy and dual-purpose cows	10.0 per cow	Small grain	•5 per acre
Other dairy & du. pur. cattle	3,5 per an. unit*	Sugar heets	1.5 per acre
Beef breeding herd	3.5 per an. unit*	Sweet corn	•7 per acre
Feeder catals	.25 per 100 lbs.	Corn husked	.7 per acre
Sheepwia.m flock	1.5 per an. uci.t*	Corn, howed	.4 per acre
Sheep feeders	.3 per 100 lbs	Corm, shredded	1.5 per acre
Hogs	,2 per 100 lbs.	Corn. sillage	1.0 per acre
Turkeys	5 per 100 lbs.	Corp., fodder	1.0 per acre
Hens	20,0 per 100 lbs	Alfalia hay	.6 per acre
Cauning peas	.5 per acre	Soybean nay	.8 per acre
Soybe ms for grain	.5 per acre	Other hay crops	.4 per acre

^{*}Animal-unit represents one dairy cow or bull, two other dairy cattle, $1\frac{1}{4}$ beef caws or bull, 1 feeder steer or heafer, 3 1/3 other beef cattle, 7 sheep, 14 lambs, $2\frac{1}{5}$ hors, 5 pigs, 50 hens or 1,100 pounds of turkeys produced.

POWER AND MACHINERY EXPENSES

Power and machinery expense per crop acre is an indication of the economy with which capital is invested in these items. The crop acres per farm ranged from 116 to 598 with an average of 208 (Table 12). The expenses are high on the farms with a small acreage. In some cases, low expenses for labor might be effect by high power and equipment costs. The farmer is interested in aperating at the lowest cost for power, machinery and labor combined.

TOTAL FEED COSTS AND RETURNS FROM YOUR LIVESTOCK ENTERPRISES

The total "return over feed costs" for each class of livestock is shown in Table 14. This differs from the "return over feed" shown in the enterprise statement in that it is the total for each class of livestock instead of a return 'per head" "per unit" or "per 100 pounds". These data indicate the relative importance of different classes of livestock as a source of income and as a market for feed. The total return is the same as the returns and net increases shown on page 5. The value of milk consumed by calves is included in the total returns from dairy or dual pupose cows and in the total feed cost for other dairy or other dual purpose cattle. The value of milk sonsumed by calves is not included in either the total returns or the feed cost of "all dairy" or "all dual purpose" sattle. The return over feed is not a net return, but retier the amount available from the gross income, after paying the feed bill, to cover the outlay for aired labor, power, equipment, taxes, insurance, interest and veterinary bills and to provide a return for the use of family labor and capital.

Table 14.	Total Feed	Costs a	ind 1			Livestock Enter	
						rpose cattle	
	•			Cows	Other	All	herd

fotal returns	:			a			· · · · · · · · · · · · · · · · · · ·
fotal feed co	st						
otal return	over feed	•				, ·	

Feed is the largest single item of cost for all classes of livestock. However, the proportion of the total cost represented by feed varies considerably serveen classes of livestock. Feed makes up approximately 45 percent of the total costs of meditaining dairy cattle and poultry, 50 percent in the case of a farm book of shappy and 75 to 90 percent for hogs, feeder cattle and feeder lambs. consequently. is is necessary to secure a relatively higher return over feed from dairy cabtle and poultry than from the other livestock, enterprises in order to be able to cover all the costs other than feed.

HOGS

The return over feed cost per 100 pounds of hogs produced varied from \$8.93 for those farmers ranking in the upper one third in feeding efficiency to a return of \$4.41 for those in the lowest one third. Some of the important factors beat affected return over feed were:

- 1. Quantity of feed required to produce 100 pounds of hogs.
- Price received.
 Number of pigs born per litter.
- 4. Number of pigs weaned per litter.

DAIRY AND DUAL PURPOSE CAITLE

The quantity of feed consumed, value of feeds and returns from dairy cattle are presented in lables 16, 17, and 18. The statements include one herd which was classified as dual purpose cattle.

The return over feed cost per cow varied from \$40.76 to \$174.65 amond the 12 herds covered by this study. Some of the important factors that effected the return over feed were:

- 1. Rate of production (pounds butterfat per cow)
- 2. Price received for butterfat
- 3. Feeding efficiency
- 4. Quality of ration
- 5. Economy of ration (feed cost per pound butterfat)

Table 16. Factors of Cost and Returns from Dairy Cows, 1957

CHICKENS

None of the 11 farmers raiding chickens failed to receive a return large enough to cover the cost of feed. The average return over feed from the 24 flocks included in this report was \$.87 cents per hen (Table 20).

Some of the important factors that affected the return over feed were:

- 1. Quantity of feed required per hen -
- 2. Price received per dozen eggs sold
- 3. Eggs làid per hen
- 4. Percent of hens that are pullets 5. Percentage death loss of hens
