Agricultural Distortions Working Paper 49, December 2007

The authors were all at the University of Adelaide in Australia at the time of completing this compilation except Kurzweil, who is at the African Development Bank in Tunis. This is a product of a research project on Distortions to Agricultural Incentives, under the leadership of Kym Anderson of the World Bank's Development Research Group. The authors are grateful for helpful comments from workshop participants and for funding from World Bank Trust Funds provided by the governments of Ireland, Japan, the Netherlands (BNPP) and the United Kingdom (DfID).

This Working Paper series is designed to promptly disseminate the findings of work in progress for comment before they are finalized. The views expressed are the authors' alone and not necessarily those of the World Bank and its Executive Directors, nor the countries they represent, nor of the institutions providing funds for this research project.

ANNUAL ESTIMATES OF LATIN AMERICAN DISTORTIONS TO AGRICULTURAL INCENTIVES

**Ernesto Valenzuela, Marianne Kurzweil,
Esteban Jara, Johanna Croser and Kym Anderson**

This compilation summarizes the estimates, for the focus countries of Latin America and the Caribbean, of key distortion indicators defined in Anderson et al. (2008). These tables appear also in an Appendix in Anderson and Valdés (2008).

Three tables are provided for each country: (a) the Nominal Rate of Assistance to individual farm products covered in the study and their weighted average, using as weights production valued at undistorted prices; (b) the Relative Rate of Assistance to producers of agricultural (relative to non-agricultural) tradables, again using as weights production valued at undistorted prices, and the component parts of the RRA calculation; and (c) the weights themselves for individual covered farm products and for the residual non-covered group of products, shown as percentages and so they sum to 100 percent.

The Nominal Rate of Assistance (NRA) in the case of a product having just its output price distorted by government policies is the percentage by which the domestic producer price exceeds the price that would prevail under free markets, that is, the border price appropriately adjusted to account for differences in product quality, transport costs, processing costs, etc. A negative value indicates the domestic price is below that comparable border price. If producers of that product also are affected by distortions to product-specific input prices, their ad valorem equivalent is accounted for by subtracting the ad valorem input price distortion times its input-output coefficient from the farm industry's output NRA to get the total nominal rate of assistance to production of that farm product.

The Relative Rate of Assistance (RRA) is defined as $100 * [(100 + \text{NRA}_{\text{ag}}^t) / (100 + \text{NRA}_{\text{nonag}}^t) - 1]$, where NRA_{ag}^t and $\text{NRA}_{\text{nonag}}^t$ are the percentage NRAs for the tradables parts of the agricultural and non-agricultural sectors, respectively.

The sources of these tables are the Working Paper version of the chapters in Anderson and Valdés (2008) (and its associated spreadsheet), each of which is downloadable in the Working Paper section of the project's website, www.worldbank.org/agdistortions. Also

available at that website is the complete global distortions database (Anderson and Valenzuela 2008). The references are provided below.

^a NRAs including assistance to nontradables and non-product specific assistance.

^b NRAs including products specific input subsidies.

^c The Relative Rate of Assistance (RRA) is defined as $100 * [(100 + \text{NRA}_{\text{ag}}^t) / (100 + \text{NRA}_{\text{nonag}}^t) - 1]$, where NRA_{ag}^t and $\text{NRA}_{\text{nonag}}^t$ are the percentage NRAs for the tradables parts of the agricultural and non-agricultural sectors, respectively.

^a NRAs including assistance to nontradables and non-product specific assistance.

^b NRAs including products specific input subsidies.

^c The Relative Rate of Assistance (RRA) is defined as $100 * [(100 + NRA_{ag}^t) / (100 + NRA_{nonag}^t) - 1]$, where NRA_{ag}^t and NRA_{nonag}^t are the percentage NRAs for the tradables parts of the agricultural and non-agricultural sectors, respectively.

^a NRAs including assistance to nontradables and non-product specific assistance.

^b NRAs including products specific input subsidies.

^c The Relative Rate of Assistance (RRA) is defined as $100 * [(100 + \text{NRA}_{\text{ag}}^t) / (100 + \text{NRA}_{\text{nonag}}^t) - 1]$, where NRA_{ag}^t and $\text{NRA}_{\text{nonag}}^t$ are the percentage NRAs for the tradables parts of the agricultural and non-agricultural sectors, respectively.

^a NRAs including assistance to nontradables and non-product specific assistance.

^b NRAs including products specific input subsidies.

^c The Relative Rate of Assistance (RRA) is defined as $100 * [(100 + \text{NRA}_{\text{ag}}^t) / (100 + \text{NRA}_{\text{nonag}}^t) - 1]$, where NRA_{ag}^t and $\text{NRA}_{\text{nonag}}^t$ are the percentage NRAs for the tradables parts of the agricultural and non-agricultural sectors, respectively.

^a NRAs including assistance to nontradables and non-product specific assistance.

^b NRAs including products specific input subsidies.

^c The Relative Rate of Assistance (RRA) is defined as $100 * [(100 + \text{NRA}_{\text{ag}}^t) / (100 + \text{NRA}_{\text{nonag}}^t) - 1]$, where NRA_{ag}^t and $\text{NRA}_{\text{nonag}}^t$ are the percentage NRAs for the tradables parts of the agricultural and non-agricultural sectors, respectively.

^a The shares of studied countries in part (a) have been 'scaled down' in part (b) to account for the fact that the studied countries are not all countries of the region, the assumption being that the share for the non-studied group of countries at undistorted prices is the same as its share of regional agricultural value added at distorted prices (from the World Bank's *World Development Indicators*).

Source: Spreadsheets of authors of Chapters 2-9 of Anderson and Valdés (2008).

Table 13: Summary of NRA data for studied Latin American countries

Country	ISO Code	Max. number of years	Maximum number of products	Number of NRA observations	2000-04		
					Weighted average NRA ^a	Standard deviation NRA ^a	Gross value of production ^b
Argentina	AR	46	6	213	-14.9	12.6	16.2
Brazil	BR	40	10	331	4.1	7.6	36.6
Chile	CL	46	7	307	5.8	13.3	5.3
Colombia	CO	46	11	505	25.9	46.0	7.5
Dominican Rep.	DO	51	10	510	2.5	132.8	1.5
Ecuador	EC	38	11	418	10.1	29.6	3.1
Mexico	MX	26	15	390	11.6	41.1	26.6
Nicaragua	NI	14	12	165	-4.2	27.7	1.3
All LA studied countries^c		51	27	2839	4.8	23.9	98.1

^a Weighted average NRA and standard deviation NRA for covered products, in percent, using the gross value of production at undistorted prices as weights.

^b Gross value of production at undistorted prices, in current US\$ billions.

^c The regional averages are weighted using the 5-year average annual value of production by country.

Source: Chapters 2-9 of Anderson and Valdés (2008).

Table 14: Summary of NRA data by major product, Latin American region, 2000-04

Product	Number of countries	2000-04		Gross value of production ^a	Countries included (by ISO Code)
		Unweighed average NRA, %	Weighted Average NRA, %
