## California Department of Food and Agriculture

## Agricultural Commissioners' Crop Reports

 San Bernardino County
## 1962-1967

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics, http://giannini.ucop.edu/.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, http://are.berkeley.edu/library/ . Please contact the Library to consult the originals.

AGRICULTURAL CROP REPORT
1962
To: Charles Paul, Director
California Department of Agriculture
and
The Honorable Board of Supervisors
County of San Bernardino
Nancy E. Smith, Chairman

| S. Wesley Break | Daniel D. Mikesell |
| :--- | :--- |
| Ross Dana | Paul T. Young |

In accordance with the provisions of Section 65.5 of the Agricultural Code of the State of California, I hereby submit the Annual Crop and Livestock Report for the year 1962, covering the conditions, acreage, production and value of the asricultural products for the county of Sen Eernardino.

On the basis of gross returns to the grower, the total value of the agricultural inclustries of the county herein listed amount to $\$ 122,533,180$ for 1962 as compared with $\$ 118,487,450$ for 1961 . This value is a $3.4 \%$ increase over the previous year and is the highest on record for the county. The value of crops increased $\$ 1,480,000$ in spite of a reduction in acreage of 1,300 acres. Livestock valuation increased over $\$ 2,500,000$ attributed mainly to increase in the poultry and dairy industries.

These gross receipts represent dollars that, for the most part, go into circulation locally and support the county's econony. iEconomists still claim that the impact of agriculture on the State's economy is over three times the valuation. Reckoned on the same basis, the total impact of agriculture upon the economy in San Bernardino County approximates 363.5 million dollars.

The members of our department, including office personnel and district inspectors, have made an earnest endeavor to make this report as accurate as possible. We are indebted to the nembers of our departinent who secured basic information and to all organizations and individuals who couperated and assisted us in making this report possible. To them we extend our sincere appreciation.

Respectifully submitted,

H. A. Crane

Agricultural Commissioner

Valuations given in this report for citrus are f.o.b. as fruit leaves the packing house. The average returns for all other crops are determined at the producer's first delivery point. It should be stated that the dollar figures herein given are gross receipts and not net returns to the producer.

Citrus: The total citrus acreage for San Bernardino County for 1962 was 25,317 acres. Navel oranges account for one-half of this total with 12,345 acres while Valencia oranges account for one-quarter with 6,478 acres. Lemon acreage was 4,582 and grapefruit 1,612 acres. Miscellaneous oranges with 298 acres, plus 2 acres of limes make up the balance.

There 1 are 800 acres of oranges, 315 acres of lemons and 105 acres of grapefruit removed or abandoned during the year for a total loss of 1,220 acres of citrus. This loss resulted from the continued extension of residential, industrial and highway construction into our farming areas. In spite of the continual losses sustained in our citrus acreage, San Bernardino County is still one of the leading citrus counties in the state, being second in navel oranges and grapefruit, third in lemons and fourth in Valencia oranges.

Total citrus production was 8,518,200 cartons, including fruit sold for processing. This figure shows an increase of $5 \%$ over the previous year due primarily to better production of lemons and Valencia oranges. Total valuation of all citrus was $\$ 21,1 I_{4}, 500$ or an increase of $3 \%$ over the previous year.

Sub-tropical and Deciduous fruits: Avocado production increased slightly with normal returns. There was no commercial harvest of olives. Apple production was the best in many years in our mountain apple districts. Peach production returned to normal after a cool winter and near normal rainfall. Plum production recovered slightly from the record low of the previous year. Wine grape production continued good on irrigated vineyards averaging 4.5 tons per acre for all grapes. Tonnage as high as 10 ton per acre was received however on some vineyards. Returns to the grower for grapes continued high for the second year in a row. Bearing acreage of walnuts continues to decline with production averaging one-half ton to the acre.

Vegetables: Plantings of all vegetables decreased 985 acres from the previous year with a corresponding decrease in valuation. Reductions were noted in asparagus, sweet corn, lettuce, melons, potaives, rhubarb, sweet potatoes and tomatoes. Increases in fall vegetables helped offset sonewhat the loss in other crops. Total valuation of all vegetables was only $5 \%$ less than the previous year. year due to increased plantings of small grains and grain hay crops following late rains of last winter. Other field crops remained fairly constant. Total value of all field crops was approximately $20 \%$ above the 1961 value.

IIursery Stock: Out of a total of 310 acres of nursery stock and products harvested, 180 acres were devoted to rose plant production. Fruit trees, shade trees, cut flowers and other field grown ornamental stock make up the balance. The estimated gross value of all nursery stock was over $12,200,000$.

Livestock: The es+imated value of all livestock production and products was $\$ 83,371,100$ the highest on record. This record value can be attributed to increases in the dairy and poultry industries in the county. There are now 263 dairies in the county, an increase of 14 over the previous jrear. These new dairies are located in the Chino-Ontario district where more are now under construction. Dairy cows increased 3,700 in number with a corresponding increase in milk production.

Producing hens were estimated at over $6,500,000$ birds, another record high. Several ranches have increased their capacity to handle over 100,000 hens. Production per hen remains at approximately 237 eggs per jear. Total egg production was 130,184,000 dozen with a valuation of over ${ }_{4}{ }^{2} 39,000,000$. Prices received by producers averaged 30 cents per dozen. San Bernardino County continues to be one of the leading egg producing counties in the nation.

Production and valuation of other livestock was similar to the previous year. Values for feed lot cattle were figured on a weight gain basis while the remainder sold from the range, cull dairy stock and calves as well as other livestock were figured on the basis of full weight.

## AGRICULTURAL CROP REPORT

Charles Paul, Director
California Department of Agriculture
Honorable Board of Supervisors
County of San Eernardino
Nancy E. Smith, Chairman
5. Wesley Break:

Ross Dana
Daniel D. Mikesell
Paul J. Young
In accordance with the provisions of Lection 65.5 of the Agricultural Code of the State of California, I hereby submit the Annual Crop and Livestock Report for the year 1963, covering the conditions, acreage, production and value of the agricultural products for the county of San Bernardine.

On the basis of gross returns to the grower, the total value of the agricultural industries of the county herein listed amount to $6125,983,800$ for 1963 as compared with $\$ 122,533,180$ for 1962.

This value is a $2.8 \%$ increase over the previous year and is the highest value on record for the county. The value of all crops decreased $1.6 \%$ as did acreage by 1,335 acres. Livestock and poultry, however, increased a little over $\$ 4,000,000$ and is mainly responsible for this record high value.

It should be stated that the valuation figures herein given are gross receipts and not net returns to the producer. These gross receipts represent dollars that, for the most part, go into circulation locally and support the county's economy.

The members of our department, including office personnel and district inspectors, have made an earnest endeavor to make this report as accurate as possible. We extend our sincere appreciation to all organizations and individuals who cooperated and assisted us in making this report possible.

Respectfully submitted,

R. M. Schneider Agricultural Commissioner

## CROP SURMARY

Valuations given in this report for citrus are f.o.b: as fruit leaves the packing house. The average returns for all other crops are determined at the producer's first delivery point. Values for feed lot cattle were figured on a weight gain basis while the remainder sold from the range, cull dairy stock and calves as well as other livestock were figured on the basis of full weight.

Citrus: The total citrus acreage for San Bernardino County for 1963 was 24,637 acres. Losses in acreage removal or abandonment during the year totaled 955 acres. This loss resulted from the continued extension of residential, industrial and highway construction into our farming areas. In spits of the continual losses sustained in our citrus acreage, San Bernardino Country is still one of the leading citrus counties in the State, being second in navel oranges and grapefruit, third in lemons and fifth in Valencia oranges.

Total citrus production for the county was $8,616,500$ cartons, $j$ sclnding fruit sold for processing. This figure shows a slight increase of $1 \%$ over the previous year but would have been larger had it not heen for freezing weather last January. Total valuation of all citrus was w $22, \$ 78,400$ an increase of $5 \%$ over the previous year.

Deciduous fruits: Apple, peach and plum production was near normal. Loss of acreage is revealed in total production figures. Total grape production was considered normal after being threatened by a 3 inch rainfall during early harvest. Out-of-state shipments were considerably reduced due to damage from rain to shipping varieties. Returns to growers per ton decreased from the high prices of the last two years. Walnut production was at a record low.

Vegetable and Field Crops: Plantings of all vegetables decreased 1,695 acres from the previous year with a corresponding decrease in valuation. Field crops, on the other hand, increased 1,925 acres due to additional plantings of alfalfa, grain hay and field corn. Total valuation reflects the high prices received for hay plus the additional acreage.

Nursery Stock: Out of a total of 300 acres of nursery stock and products harvested, 167 acres were devoted to rose plant production. Fruit trees, shade trees, cut flowers and other field grown ornamental stock make up the balance. The estimated gross value of all nursery stock was ever ir2,500,000.

Livestock: The estimated value of all livestock and poultry production was $487,445,900$ the highest on record. This record value is attributed to an increase in the dairy industry. There are now 269 dairies in the county with 17 new dairies constructed in the Chino area during the year. Dairy cows increased 2,800 in number with a corresponding increase in milk production.

Producing hens were estimated to be 6,600,000 a slight increase over the previous year. The trend is for an increase in number of birds on present ranches with some going over the 100,000 mark. Production per hen remains at 237 eggs per year. Total egg production was close to $131,000,000$ dozen with a valuation of over $439,000,000$. San Bernardino County thus continues to be the leading egg producing county not only in the State but the nation as well. Production and valuation of other livestock was similar to the previous year.

Summary and data compiled by:
Warren A. Burr
Department Statistician

AGRICULTURAL CROP REPORT
1964
Charles Paul, Director
California Department of Agriculture
Honorable Board of Supervisors
County of San Eernardino
Ross Dana, Chairman
S. Wesley Break

Daniel D. Mikesell
Nancy E. Smith
Paul J. Young
In accordance with the provisions of Section 65.5 of the Agricultural Code of the State of California, I hereby submit the Annual Crop and Livestock Report for the year 1964, covering the conditions, acreage, production and value of the agricultural products for the county of San Bernardino.

On the basis of gross returns to the grower, the total value of farm products grown in the county herein listed amount to $\$ 129,013,200$ for 1964 as compared with $\$ 125,983,800$ for 1963.

This value is a 2.4 percent increase over the previous year and is the highest value on record for the county. The gross value of crops was $\$ 39,407,200$ as compared with $\$ 38,537,900$ for 1963, with 3,750 less acres in production. The value of livestock was $\$ 89,606,000$ an increase of $\$ 2,160,100$ over the previous year. There are fifteen different crops or commodities in the report showing a valuation of more than one million dollars.

It should be stated that the valuation figures herein given are gross receipts and not net returns to the producer. These gross receipts do, however, represent new wealth that goes into circulation locally and support the county's economy. Economists claim that the impact of agriculture on the State's economy is over three times the valuation. On the basis of this statement, the total impact upon the economy in San Bernardino County actually exceeds 387 million dollars.

To the members of our department and other persons who provided pertinent information to make this report possible we extend our sincere appreciation.

Respectfully submitted,

R. M. Schneider

Agricultural Commissioner

Valuations given in this report for citrus are f.o.b. as fruit leaves the packing house. The average returns for all other crops are determined at the packing house or the producer's first delivery point. Values for feed lot cattle were figured on a weight gain basis while the remainder sold from the range, cull dairy stock and calves as well as other livestock were figured on the basis of full weight.

Citrus: The total citrus acreage for San Bernardino County for 1964 was 23,692 acres. Net reduction in acreage from the previous year was 777 acres of oranges and 291 acres of lemons while grapefruit shows an increase of $46 a s$ and miscellaneous oranges 77 acres. These net figures are the result of a tree $n$ tres census of fruit acreage plus removals or abandonments. Of this total citrus acreage 2,367 acres were planted since 1960, mostly as replants, and will come into bearing a few years from now. In spite of the continual losses sustained in our citrus acreage due to the expansion of residential, industrial and highway construction San Bernardino County remains one of the leading citrus counties in the State being third in navel oranges, fifth in Valencia oranges, second in grapefruit and third in lemon acreage. Total citrus production was 11,058,700 cartons including fruit sold for processing. This production figure is 28 percent higher than 1963 aid is the highest since 1960. Proof of the small sizes that prevailed during the harvest season can be noted in the high percentage of fruit that was sent to processors. Total valuation of all citrus was $\$ 22,736,000$ an increase of 1.5 percent over the previous year.

Deciduous fruits: Apple production was near normal, while peach and plum production was kelow normal. Less of acreage is revealed in the low production figures. Wine grape production was 60 percent of a normal crop while prices received by producers was up considerably. Walnut acreage and production continue to decline.

Vegetable and Field Crops: Plantings of all vegetables decreased 848 acres from the previous year. Total valuation increased 7 percent attributed mainly to increased returns to potato growers. Field crops, on the other hand, increased 2,500 acres due to new plantings of grain hay plus the additional use of pasture land for livestock.

Nursery Stock: Out of a total of 318 acres of nursery stock and products harvested, 177 acres were devoted to rose bush production. Fruit trees, shade trees, field grown ornamental stock and cut flowers make up the balance. The estimated gross value of all nursery stock was over $\$ 3,000,000$.

Livestock: The estimated value of all livestock and poultry production was $\$ 89,606,000$ the highest on record. This record value is attributed to an increase in the dairy industry. There were 273 dairies in the county at the end of the year with 21 new dairies constructed in the Chino area during the past 2 years. All indications point towards a continuance of this trend for the next few years.

Producing hens were estimated to be $6,508,000$, a slight decrease from the previous year. Although several small egg ranches have gone out of business the trend towards increased number of birds on present ranches continues. Production per hen is now estimated to be 241 eggs per year. Total egg production was 130,730,000 dozen with a value of 38.5 million dollars. San Bernardino County thus continues to be the leading egg producing county not only in the State but the nation as well.

Charles Paul, Director
California Department of Agriculture
Honorable Board of Supervisors
County of San Bernardino
Ross Dana, Chairman
S. Wesley Break

Daniel D. Mikesell
Nancy E. Smith
Paul J. Young
In accordance with the provisions of Section 65.5 of the Agricultural Code of the State of California, I hereby submit the Annual Crop and Livestock Report for the year 1965 covering the conditions, acreage, production and value of the agriculturai products for the County of San Bernardino.

The values in this report represent the gross value of agricultural production in San Bernardino County whether the commodity was sold or used on the farm where grow. On this basis the total value of farm products grown in the county amounted to $\$ 131,445,400$ for 1965 as compared with $\$ 129,013,200$ for 1964 .

This value is a 1.8 percent increase over the previous year and is the highest value on record for the county. The gross value of crops was $\$ 39,237,400$ as compared with $\$ 39,407,200$ for 1964, with 4,570 more acres in production. The value of livestock production was $\$ 92,208,000$ an increase of $\$ 2,602,000$ over the previous year. There were fourteen agricultural commodities in the county with a valuation of more than one million dollars.

Highlighting the marketing year for the county's farm products were both high and low prices, large and small crops and the problems associated with farm labor supply. As growth income rises farm production expenses also rise. Thus net farm income is not commensurate with these high values and hasn't been for several years. These values do, however, have an impact on the county's economy. It is estimated that agriculture in the county, with its related processing and marketing activities, contributes 400 to 500 million dollars every year to the county's economy.

To the members of our department and others who provided pertinent information to make this report possible we extend our sincere appreciation.

Respectfully submitted,

R. M. Schneider Agricultural Commissioner

Valuations given in this report for packed citrus are f.o.b. as fruit leaves the packing house. The season average price and value of fresh market Iruits are on the basis of equivalent returns at first delivery point. Processed citrus and other fruit price and value are on the basis of equivalent returns at processing plant door. Vegetable average price and value are on a packed and loaded basis f.o.b. shipping point. Values for feed lot cattle are figured on a weight gain basis while the remainder sold from the range, cull dairy stock and calves as well as other livestock are figured on the basis of full weight.

Citrus: The total citrus acreage for 1965 was 23,528 acres. There was a net reduction of only 130 acres of oranges and 58 acres of lemons from the previous year's records while grapefruit remained the same. Navel orange tree removals totaled 158 acres and Valencia oranges 40 acres. However, there were 68 acres of Valencias planted during the year to more than compensate for the loss sustained in this variety. This net loss figure is the lowest in the last 18 years when subdivisions, freeway construction and industrial expansion in the county caused the removal of thousands of acres planted to citrus. San Bernardino County remains one of the leading citrus counties in the State being second in grapefruit, third in navel oranges and lemons and fift'. in Valencia orange acreage. Total citrus production for the county was 9,300,000 eartons including fruit sold for processing. This figure is a 16 percent reduction from the previous year and is attributed to one of the shortest lemon crops in recent years. Lemon production dropped 42 percent while other citrus crops ranged from 1 to 7 percent in reduced volume. Total valuation of all citrus was $\$ 22,176,000$, a reduction of only 2.4 percent in value from the previous citrus season.

Deciduous fruits: Apple production was below normal while peach and plum produc. tion increased over the previous year. Wine grape production returned to normal although prices were the lowest in 10 years. Strawberry acreage, yields and values increased. Walnut production improved considerably.

Vegetable and Field Crops: Inrreased plantings of sweet corn helped raise total vegetable acreage by 200 acres. Etotato prices and value remained good. Field crop acreage increased 4,000 acres attributed mainly to increased alfalfa plantings in the desert areas. The increased hay production was offset by a lower price resulting in only a slight increase in total field crop valuation. Field grown nursery stock, including 168 acres of roses, totaled 313 acres with a value of over $\$ 3,000,000$.

Livestock: The estimated value of all livestock and poultry production was $\$ 92,208,000$, the highest on record. This record value is attributed to an increase in the dairy industry. Milk production for the year is valued at $\$ 38,817,000$ supplanting eggs as the No. 1 agricultural product in the county on a value basis. There were 281 dairies in the county at the end of the year, an increase of 8 over the past year. Several more are presently under construction with all indications pointing towards a continuance of this trend for the next few years. Prices of beef animals returned to a profitable level during the year.

Producing hens were estimated to be 6,530,000 a slight increase over the previous year. The trend towards increased number of birds per ranch continues. Total egg production was $131,000,000$ dozen with a value of $\$ 36,549,000$ a decrease of 2 million dollars. This large decrease in value is attributed to the producers receiving the lowest egg prices in 24 years. San Bernardino County still continues, however, to be the leading egg producing county not only in the state but the nation as well.

AGRICULTURAL CROP REPORT
1966

Earl Coke, Director
California Department of Agriculture
Honorable Board of Supervisors
County of San Bernardino
Daniel D. Mikesell, Chairman
S. Wesley Break

Ross Dana
Nancy E. Smith
Ruben Ayala
In accordance with the provisions of Section 65.5 of the Agricultural Code of the State of California, I hereby submit the Annual Crop and Livestock Report for the year 1966 covering the conditions, acreage, production and value of the agricultural products for the County of San Bernardino.

The values in this report represent the gross value of agricultural production in San Bernardino County whether the commodity was sold or used on the farm where grown. On this basis the total value of farm products produced in the county amounted to $\$ 137,279,400$ for 1966 as compared with $\$ 131,445,000$ for 1965.

This value is a 4.4 percent increase over the previous year and is the highest value on record for the county. The gross value of crops was $\$ 33,000,000$ as compared with $\$ 39,237,000$ for 1965 , with 6,085 less acres in production. The value of livestock production was $\$ 104,274,000$ an increase of $\$ 12,000,000$ over the previous year. There were fourteen agricultural commodities in the county with a valuation of more than one million dollars.

Problems encountered with the production and marketing of crops during the year were low returns for some commodities, adverse weather conditions during growing and harvest periods and an unstable labor supply. Associated with these problems is that farm production expenses continued to climb resulting in a low net income to the growers from these record gross values. These values do, however, have an impact on the county's economy. It is estimated that agriculture in the county, with its related processing and marketing activities this past year, contributed approximately 500 million dollars to the county's economy.

To the members of our department and others who cooperated with us in providing pertinent information to make this report possible we extend our sincere appreciation.

Valuations given in this report for packed citrus are f.o.b. as fruit leaves the packing house. The season average price and value of fresh market fruits are on the basis of equivalent returns at first delivery point. Processed citrus and other fruit price and value are on the basis of equivalent returns at processing plant door. Vegetable average price and value are on a packed and loade basis f.o.b. shipping point. Values for feed lot cattle are figured on a weight gain basis while the remainder sold from the range, cull dairy stock and calves as well as other livestock are figured on the basis of full weight.

Citrus: The total citrus acreage for San Bernardino County for 1966 was 23,316 acres. There was a net reduction of only 225 acres of oranges and 12 acres of lemons from the previous year's records while grapefruit acreage increased 25 acres. San Bernardino County thus remains one of the leading citrus counties in the State being second in grapefruit acreage, third in navel oranges and lemons and sixth in Valencia oranges. Total citrus production for the county was $9,301,000$ cartons, including fruit sold for processing. This figure is practically the same as the previous year's production. Total valuation was, however, the lowesi since 1958. Reasons advanced for this condition were low prices received for navel oranges due particularly to the predominance of small sizes plus the heavy cullage of all citrus damaged by the severe winds of last January. Diversion of citrus fruits to processing plants thus increased considerably resulting in low returns to the growers. Total valuation of all citrus was $\$ 18,648,000$, a reduction of 16 percent from the previous citrus season.

Deciduous fruits: Apple, apricot and plum production increased considerably over the previous year. Wine grape yields were reduced as were returns to the grower. An estimated 3,000 acres of grapes were not harvested due to low prices, 1abor difficulties and rainfall during harvest causing loss on the vines. Strawberry acreage, yields and values increased.

Vegetable and Field Crops: Increased plantings of tomatoes and dry onions helped offset reductions in vegetable acreage of Irish potatoes, sweet corn and sweet potatoes. Low Irish potato yields and price returns reduced values over $\$ 1,000,000$. In spite of reduced alfalfa acreage increased value per ton raised returns to previous levels. Field grown nursery stock valuation was reduced over $\$ 1,000,000$ due primarily to a 100 acre reduction in rose bush production.

Livestock: The estimated value of all livestock and poultry production was $\$ 104,273,800$, the highest on record. This record value is mainly attributed to an increase in the dairy industry and a 6 c increase in the price of eggs over the previous year. Milk production for the year is valued at $\$ 42,916,000$. There were 303 dairies in the county at the end of the year, an increase of 22 over the past year. San Bernardino County now ranks second in milk production in the State, topped only by Los Angeles County. Present indications point towards a continuation of increased dairies for the next few years.

Producing hens were estimated to be $6,342,000$, a slight decrease from the previous year. Total egg production was $127,000,000$ dozen with a value of $\$ 43,277,000$, an increase of $\$ 6,000,000$ over the previous year. This high figure returns eggs as the number one agricultural product in the county on a value basis, supplanting milk by a slight margin. San Bernardino County thus continues to be the leading egg producing county not only in the State but the nation as well.

FRUIT, NUT AND VINE ACREAGE, 1966

Nantes F. Smith
Ruben Ayala
In compliance with the provisions of Section 2279 of the Agricultural Code of the State of California, I hereby submit the Annual Crop and Livestock Report for the year 1967 covering the conditions, acreage, production and value of the Agricultural products for the County of San Bernardine.

The values in this report represent the gross value of commercial agricultural production in San Bernardino County. On this basis the total value of farm products produced in the county amounted to $\$ 135,919,000$ for 1967 as compared with $\$ 137,279,400$ for 1966.

This value is a one percent decrease from the previous year but is the second highest value on record for the county. The gross value of crops was $\$ 36,477,000$ as compared with $\$ 33,000,000$ for 1966 , with 7,500 more acres in production. The value of livestock production was $\$ 99,442,000$ a decrease of $\$ 4,832,000$ from the previous year. There were twelve agricultural commodities in the county with a valuation of more than one million dollars.

Problems encountered with the production and marketing of farm commodities during the year were low prices for some products, especially eggs, adverse spring weather conditions during the bloom and planting season plus an unstable labor supply. Associate with these problems is the fact that farm production expenses have continued to climb resulting in net farm income to be well below last year. The gross values do, however, have an impact on the county's economy. It is estimated that agriculture in the county, with its related processing and marketing activities this past year, contribute approximately 500 million dollars to the economy of the county.

To the members of our department and others who cooperated with us in providing pertinent information to make this reprot possible we extend our sincere appreciation.

Respectfully submitted,
Ni.NALAneider
R. M. Schneider

Agricultural Commissioner

## CROP AND LIVESTOCK ANALYSIS

Valuations given in this report for packed citrus are f.o.b. as fruit leaves the packing house. The season average price and value of fresh market fruits are on the basis of equivalent returns at first delivery points or at roadside. Processed citrus and other fruit price and value are on the basis of equivalent returns at processing plant door. Vegetable average price and value are on a packed and loaded basis f.o.b. shipping point. Values for feed lot cattle are figured on a weight gain basis while the remainder sold from the range, cull dairy stock and calves as well as other livestock are figured on the basis of full weight. Milk production and valuation figures were supplied by the Crop Reporting Service and are for commercial milk only. Egg prices are based on the over-all average received by the producers with allowances being made for those sold direct to consumers.

Citrus: The total citrus acreage for San Bernardino County for 1967 was 22,682 acres. There was a net reduction of 435 acres of oranges and 216 acres of lemons from the previous year's records. In spite of these continuing losses the county remains one of the leading citrus counties in the State being second in grapefruit acreage, third in lemons and navel oranges and sixth in Valencia oranges. Total citrus production for the county was $10,449,200$ cartons, including fruit sold for processing. This figure is 12 percent above the previous year's production. The navel orange crop was considered one of the best in the past decade. Crop volume was good with fruit of excellent quality. The Valencia orange crop was plagued by below normal sizes a.d heavy granulation although fruit volume was good. One of the heaviest crops of lemons in years was accompanied by fine quality fruit. Small sizes predominated for a normal grapefruit crop. Total valuation of all citrus was $\$ 21,576,000$, an increase of 15 percent over the previous citrus season.

Deciduous fruits: Apple, grape, peach, plum and walnut production decreased from the previous year. This decline was attributed largely to adverse spring weather when prolonged rainy and cool periods interrupted normal bloom and crop set.

Vegetable and Field Crops: Increased plantings of dry onions helped offset reductions in vegetable acreage of cantaloupe, Irish potatoes, sweet corn, sweet potatoes and canning tomatoes. Conversely, field crop acreage increased over 8,000 acres due to additional plantings of all grain crops, dry beans, grain hay and sudan grass.

Livestock: The estimated value of all livestock and poultry production was $\$ 99,442,000$ during the year 1967 . This is a reduction of $\$ 4,832,000 \mathrm{from}$ the previous year and can be attributed almost entirely to a sharp decline in egg prices the last half of the year. Egg production per hen also declined slightly due to an increase in the forced molting program of a number of producers. Producing hens increased slightly to $6,368,000$ with egg production estimated at $125,000,000$ dozen. Turkey prodiction went over the one million figure while valuation decreased $\$ 380,000$ due to a ascline in prices.

Milk production for the year is valued at $\$ 49,522,000$ an increase of $\$ 6,606,000$ over the previous year. This high figure returns milk as the number one agricultural product in the county on a value basis. There were 301 dairies in the county at the end of the year with present indications favoring a continuation of increased dairies for the next few years. San Bernardino County now ranks first in milk production in
the State.
