California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

Shasta County

1971-1981

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics, <http://giannini.ucop.edu/>.

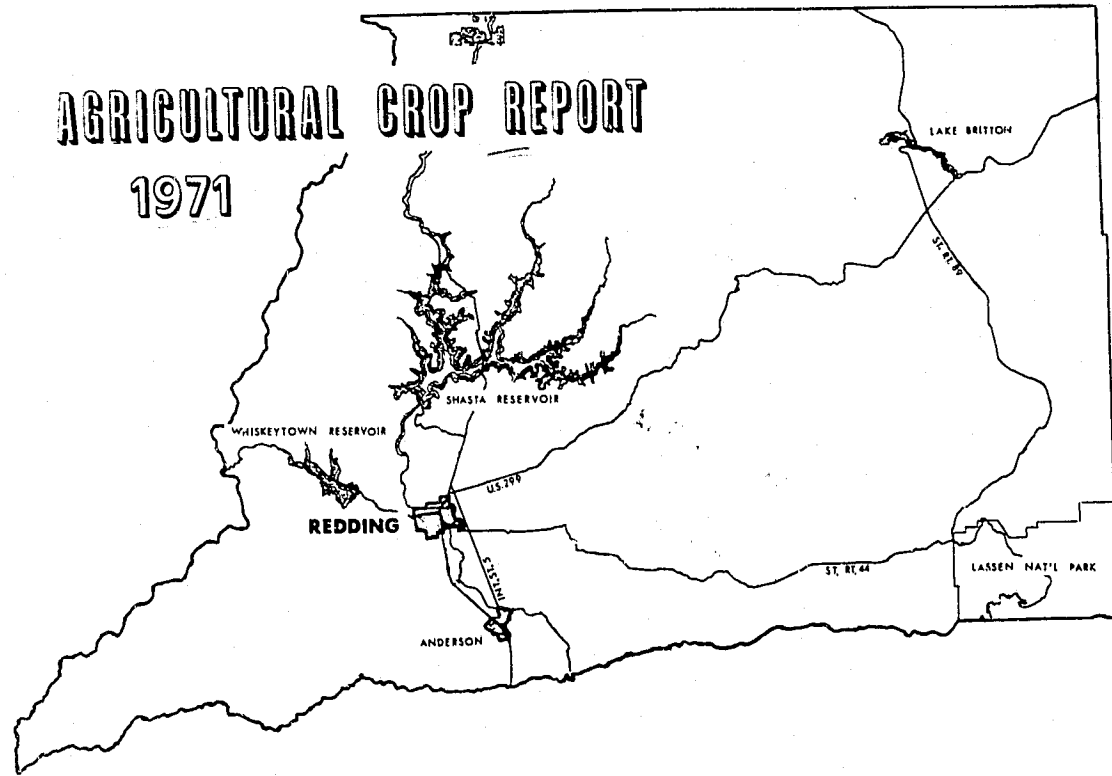

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

MR. JERRY W. FIELDER, DIRECTOR OF AGRICULTURE
THE HONORABLE BOARD OF SUPERVISORS, SHASTA COUNTY

Gentlemen:

This is a report of the condition, acreage, production and value of the agricultural products in Shasta County for the year 1971, submitted as required by Section 2279 of the California Agricultural Code. This report represents the gross value of production and does not attempt to show net farm income or cost of production.

Prices received for Apiary products were up for 1971. There was a honey shortage in other parts of the country and this increased price of honey was beneficial to other aspects of the industry. The trend will continue to be up for 1972. Poor range conditions drove the price of alfalfa hay up and with an increased acreage for 1971, the crop looks promising. Christmas tree prices and production were higher for 1971.

Prices received for wool in 1971 were very low. This trend is evident throughout the country and was the result of a reduction in market demand. There was a serious reduction in prices received for olives and although production was up, some acreages were not harvested. Potatoes are another crop where prices were below normal and this trend will probably affect production in the future.

Serious loss in production was experienced with fruit crops due to spring frost. The apple crop was the most severely affected with almost entire crop loss. Pears and prunes also suffered moderate loss.

Shasta County has a population of over 7,000 horses and the figures we reported for horses represent animals that were actually sold. Horse husbandry in Shasta County is an important industry and is becoming larger each year with more emphasis being placed on quality of stock.

Data for compiling this report have been obtained from producers, government agencies, representatives of agri-business, and individuals who have special knowledge in the field. The co-operative assistance we have received from them is sincerely appreciated. The compilation of the report was under the direction of Inspector Dave Haakonson.

C. Bruce Wade
Agricultural Commissioner

ZEBRA

TROUT HATCHERY TRAYS

Of considerable economic importance and an item often overlooked in Shasta County is the raising of game and fish for recreation, food and profit. To differentiate this enterprise from normal agriculture activity, we must look at the type of animals that are grown. To fall into the recreation category, the game must occur naturally at some location and be the object of some sport or be a species exotic enough to be in demand.

The commercial raising of game birds in the County is such an enterprise. The three most common varieties found in Shasta County farms are Ring-necked Pheasants, Chukar Partridge and Bobwhite Quail. There are also many other types of birds found such as various wild ducks, exotic pheasants, wild turkeys and Valley Quail. All birds that occur in a wild state require a license that is sold by the State Department of Fish and Game. Most of the game birds go to hunting clubs and are hunted for sport. Bird raisers will process their birds and sell them for table use and a small percentage of birds are used this way. These birds may also be purchased for pets or brood stock for a start in the business. The game bird hunting clubs in Shasta County not only provide an outlet for the bird industry, but because some birds do escape, they also add to the variety of species in our environment. The clubs sell hunting memberships but single day hunts can be arranged.

Most of the commercial fish farmed in Shasta County are sold to enterprises in other counties. Catchable size Rainbow Trout are most commonly sold and these are planted to be caught. An individual can purchase fingerling trout and raise them in private waters. This enterprise also requires a license from the Department of Fish and Game. As with game bird farming, a certain percentage of these Rainbow Trout are processed and quick frozen for human consumption.

Game farming is new to Shasta County, but promises to be an interesting business. The stock is sold mostly to zoos and to a limited number of private individuals. There are such animals as Dromedary, African Cameroon Pigmy Goat, Miniature Fallabella Horse, Llama, Zebra, Sicilian Donkey and Texas Longhorn Cattle. The demand for these animals is fair and the raising of these exotic animals requires expertise that ordinary animal husbandry does not.

Mr. C.B. Christensen, Director of Food & Agriculture
The Honorable Board of Supervisors, Shasta County

Gentlemen:

This is a report of the condition, acreage, production and value of the agricultural products in Shasta County for the year 1972, submitted as required by Section 2279 of the California Agricultural Code. This report represents the gross value of production and does not attempt to show county inventory, net farm income, or cost of production.

Adverse weather conditions have had their effect on the harvesting of certain crops in Shasta County. The number of Christmas trees harvested in 1972 was down because of the inaccessibility of the trees due to heavier than usual snows. Strawberry plant nursery stock harvest has been affected by the heavier than normal rains but not to as large an extent as Christmas tree harvest.

Serious loss in production was experienced with fruit and nut crops due to spring frost. The olive, apple, walnut, and persimmon crops all suffered severe losses.

Prices received for crops were higher in most cases in 1972. Substantial increases were reported for the apiary, livestock, Christmas tree, wool, and olive crops. The principle of supply and demand became quite evident with the increased price of honey, which has been in short supply on a world-wide basis. Products related to honey production, such as queen bees and package bees also came up. Supplemental feeding of livestock, accelerated because of adverse weather conditions, has again brought an increase in demand and prices received for alfalfa and other hay and barley.

Shasta County has a population of over 7,000 horses and the figures we reported for horses represent animals that were actually sold. Horse husbandry in Shasta County is an important industry and is becoming larger each year with more emphasis being placed on quality of stock, and is evidenced by increases in values.

Data for compiling this report have been obtained from producers, government agencies, representatives of agri-business, and individuals who have special knowledge in the field. The co-operative assistance we have received from them is sincerely appreciated. The compilation of the report was under the direction of Inspector Dave Haakonson.

Within the lumbering industry there has been an increasing awareness of the shortage of timber available to be harvested and to meet the growing demands here in the west. One solution to this problem that is receiving serious consideration and action is the development of trees that will put on vigorous growth and mature at a more rapid rate than our present timber resources.

Several farsighted agencies in the timber and lumbering business have located a selective seed orchard for genetic improvement in the Anderson area here in Shasta County. The progeny from these trees will be planted in key locations until the supply becomes greater. Ordinarily it would take at least 20 years for a tree to start producing seed cones but with the technique of grafting scion wood from mature trees that demonstrate desirable characteristics onto root stock that has been established, they hope to have viable seed in 10 years. A few of the desirable traits that will be selected for are: rapid height and diameter growth; little taper; small branches with few limbs per whorl; cone production; and resistance to forking and snow or wind breakage.

The six species of trees under experiment are Douglas-Fir, Ponderosa Pine, White Fir, Monterey Pine, Coast Redwood, and Incense Cedar. One of the main purposes of planting this 34 acre orchard at the low elevation Anderson site is the need to keep the seed cones from becoming pollinated with pollen from less desirable trees that would be present if other conifer trees grew naturally in the area. Another factor is the ease of care for the trees since the headquarters of each participating agency is located in the Redding Anderson area.

It is important that steps such as these are taken to renew our rapidly diminishing natural resources which most people have assumed to be inexhaustible when such is not the case. As we learn to work in harmony with our environment, we further guarantee that these resources we have taken for granted will be available for future generations to enjoy.

Three vertical black bars of varying widths are positioned on the left side of the page. The bars are solid black and extend from near the top to near the bottom of the page. The middle bar is the narrowest, while the two outer bars are wider and appear to have a slightly grainy or textured appearance.

ANNUAL CROP REPORT

For
YEAR ENDING -- DECEMBER 31, 1973

C.B. CHRISTENSEN, DIRECTOR
CALIFORNIA DEPARTMENT OF FOOD & AGRICULTURE

SHASTA COUNTY
BOARD OF SUPERVISORS

- FLOYD H. MORGAN, CHAIRMANDISTRICT 5
HENRY F. KEEFERDISTRICT 1
BESSIE L. SANDERSDISTRICT 2
JOHN R. CATONDISTRICT 3
PATRICK G. LAPOINTEDISTRICT 4

Mr. C.B. Christensen, Director of Food & Agriculture
The Honorable Board of Supervisors, Shasta County

Gentlemen:

This is a report of the condition, acreage, production and value of the agricultural products in Shasta County for the year 1973, submitted as required by Section 2279 of the California Agricultural Code. This report represents the gross value of production and does not attempt to show county inventory, net farm income, or cost of production.

Prices received for most crops were higher in 1973. Substantial increases were reported for livestock, wool, Christmas trees, beans, stone fruit crops, hay and grain crops. Increases in production were reported in swine, horses, Christmas trees, beans, walnuts, and hay crops.

Adverse weather conditions had their effect on some crops, but generally were not a large factor. Olive production was down in 1973 because of a severe frost. Oat production was considerably less because dry spring conditions did not allow the crop to mature properly.

Shasta county has a population of over 7,000 horses and the figures we reported for horses represent animals that were actually sold. Horse husbandry in Shasta County is an important industry and is becoming larger each year with more emphasis being placed on quality of stock, and is evidenced by increases in values.

Data for compiling this report have been obtained from producers, government agencies, representatives of agri-business, and individuals who have special knowledge in the field. The co-operative assistance we have received from them is sincerely appreciated. The compilation of the report was under the direction of Inspector Dave Haakonson.

MR. WEBER SERVICES JAPANESE
BEETLE TRAP.

Basically, the trapping program consists of various types of insect traps that lure a specific insect and retain him through the use of aromatic baits. These traps are designed in certain ways to trap certain insects. There is one trap that is used for general pest detection, however.

Traps are placed in key areas or in areas where the specific pest may show up later. For example, Japanese beetle traps are placed around rose bushes and large turf areas, these being preferred hosts. Cherry fruit fly traps are of course placed in cherry orchards, generally around the perimeter of the county. Other key areas to place traps are in areas that have a high exposure to travelers, a common way pests are introduced into the county. Chances are, you will see a Japanese beetle trap in at least one park in Shasta County.

INSPECTOR JOE WEBER INSTALLS
CHERRY FRUIT FLY TRAP.

One of the functions of the Shasta County Department of Agriculture is to curtail the spread of harmful diseases, insects, and plants into the State and Shasta County. There are several methods used to accomplish this; an important element is the pest detection program. The insect trapping program is under the supervision of Agricultural Inspector, Joe Weber. This program is co-ordinated with each county in the State and the group effort benefits the State of California. To give the reader some idea; troyo traps, used for Khapra beetle detection cost about \$100,000 annually state-wide to maintain and service. By halting the spread of this devastating grain pest we save about one million dollars each year. To eliminate this pest the State spent \$2.5 million.

INSPECTION FOR JAPANESE BEETLE
DAMAGE ON A PRIME HOST--ROSES.

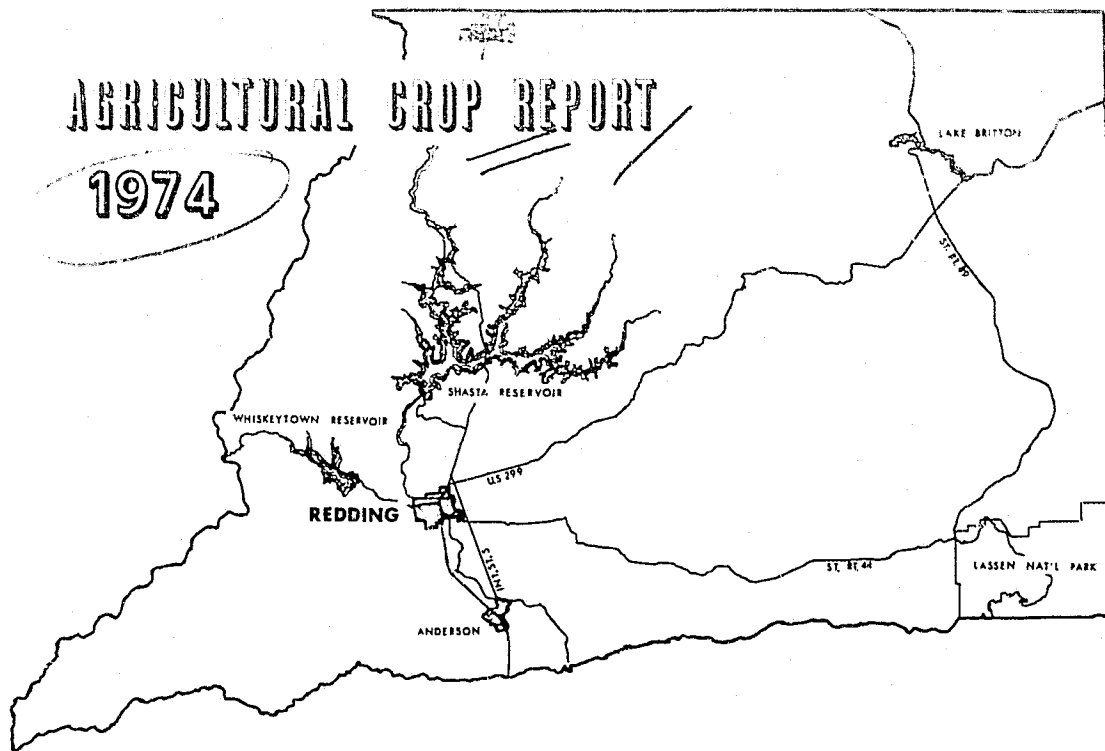

The traps are checked periodically and the scent bait replenished if necessary. This serves two purposes; one to enable the county to halt any spread of a pest as soon as possible, and another to keep the traps in full working order. To gain full benefit from the trapping program, it is necessary that people know the purpose of these traps and that they leave them alone. A molested trap cannot serve the purpose and may cause the introduction and spread of an unwanted pest in Shasta County.

Dr. Tim Wallace, Director of Food & Agriculture
The Honorable Board of Supervisors, Shasta County

Gentlemen:

This is a report of the condition, acreage, production and value of agriculture products in Shasta County for the year 1974, submitted as required by Section 2279 of the California Agriculture Code. This report represents the gross value of production and does not attempt to show county inventory, net farm income or cost of production.

Prices received for agriculture commodities were generally lower in 1974; drastically lower for livestock. Tree crops, beans and other row crops were slightly lower in value. Prices were up somewhat for nursery stock, hay crops and grain crops. The values in apiary production were dramatically higher.

Agricultural production in 1974 was approximately the same as the previous year. Slight increases, however, were evident in grain and hay crops. Acreages of all field crops were higher also.

A large price differential has become evident between what the producer receives for his livestock and retail price of beef in the supermarket. One has but to look at these figures to see that livestock producers are not reaping large profits. In fact, many are caught in a severe price squeeze. This trend is evident to a lesser extent in other areas of agricultural production.

Data for compiling this report have been obtained from producers, government agencies, representatives of agri-business, and individuals who have special knowledge in the field. The co-operative assistance we have received from them is sincerely appreciated. The compilation of the report was under the direction of Inspector Dave Haakonson.

Donald McBroom operating vapor meter test bench.

Jack Hauer testing an electric meter against the standard.

Incorporated into the Shasta County Department of Agriculture is the Division of Measurement Standards. The primary duty of weights and measures is to insure that the consuming public receive an accurate weight or measure of commodities purchased at all levels of trade. This function is achieved by the testing of all weighing and measuring devices to insure their accuracy. Two areas of the division are the testing of electric and vapor meters through the use of specialized test equipment.

There are approximately 3,000 electric meters and 3,500 vapor meters under our jurisdiction in Shasta County. This encompasses meters owned by people and companies not under the jurisdiction of the Public Utility Commission. Typical owners are gas companies and trailer parks. Frequency of testing for both types of meters is at least every ten years or at the time of a new installation. Accuracy of all meters tested must fall within a two percent margin of error. The average error on meters in service in Shasta County is maintained at approximately four tenths of one percent of error. This is an extremely high level of accuracy and well within the tolerance set by the State of California Division of Measurement Standards.

Each inspector operating the test equipment has received extensive training in the use and testing procedures of the equipment. The inspectors are certified by the State of California through a series of tests. While some may consider the qualifications for this task higher than necessary, the training and testing guarantees professional quality work at all times.

Jack Hauer preparing to test an electric meter.

ANNUAL CROP REPORT

FOR
YEAR ENDING - -DECEMBER 31, 1975

DR. TIM WALLACE, DIRECTOR
CALIFORNIA DEPARTMENT OF FOOD & AGRICULTURE

SHASTA COUNTY
BOARD OF SUPERVISORS

JOHN R. CATON, CHAIRMAN.....DISTRICT 3
HENRY F. KEEFER.....DISTRICT 1
BESSIE L. SANDERS.....DISTRICT 2
PATRICK G. LAPOINTE.....DISTRICT 4
DAN GOVER.....DISTRICT 5

DR. TIM WALLACE, DIRECTOR OF FOOD & AGRICULTURE
THE HONORABLE BOARD OF SUPERVISORS, SHASTA COUNTY

GENTLEMEN:

THIS IS A REPORT OF THE CONDITION, ACREAGE, PRODUCTION AND VALUE OF AGRICULTURAL PRODUCTS IN SHASTA COUNTY FOR THE YEAR 1975; SUBMITTED AS REQUIRED BY SECTION 2279 OF THE CALIFORNIA AGRICULTURE CODE. THIS REPORT REPRESENTS THE GROSS VALUE OF PRODUCTION AND DOES NOT ATTEMPT TO SHOW COUNTY INVENTORY, NET FARM INCOME, OR COST OF PRODUCTION.

PRICES RECEIVED FOR AGRICULTURAL COMMODITIES WERE GENERALLY HIGHER IN 1975. PORK PRICES WERE PROBABLY THE BIGGEST GAINER AND VALUES RECEIVED FOR PORK REMAINED HEALTHY THROUGHOUT THE YEAR. AN EXCEPTION TO THIS TREND WAS OUR GRAIN CROPS WHICH WERE OFF SLIGHTLY IN VALUE.

AGRICULTURAL PRODUCTION IN 1975 REMAINED APPROXIMATELY THE SAME AS THE PREVIOUS YEAR. THERE WAS AN INCREASE IN LIVESTOCK MOVEMENT AS RANCHERS ADJUSTED HERDS TO BE COMPATIBLE WITH MARKET AND FEED CONDITIONS.

AS WE POINTED OUT LAST YEAR, MANY RANCHERS AND GROWERS ARE CAUGHT IN A PRICE SQUEEZE OF HIGHER FEED AND OPERATING COSTS AND LOWER PROFIT MARGINS. PRICE INCREASES RECEIVED FOR FARM COMMODITIES HAVE NOT KEPT UP WITH INFLATION AND TAX INCREASES. IF THIS TREND CONTINUES WE WILL PROBABLY SEE MORE DRASTIC CHANGES IN OUR AGRICULTURE PICTURE IN SHASTA COUNTY.

INFORMATION FOR COMPILING THIS REPORT HAS BEEN OBTAINED FROM PRODUCERS, GOVERNMENT AGENCIES, REPRESENTATIVES OF AGRICULTURAL BUSINESS, AND INDIVIDUALS WHO HAVE SPECIAL KNOWLEDGE IN THEIR FIELD. THE COOPERATIVE ASSISTANCE WE HAVE RECEIVED FROM THEM IS INCREDIBLY APPRECIATED. THE COMPILATION OF THIS REPORT WAS UNDER THE DIRECTION OF INVESTIGATOR DAVE HAAKONSON.

GENTLEMEN:

THIS IS A REPORT OF THE CONDITION, ACREAGE, PRODUCTION AND VALUE OF AGRICULTURAL PRODUCTS IN SHASTA COUNTY FOR THE YEAR 1976; SUBMITTED AS REQUIRED BY SECTION 2279 OF THE CALIFORNIA AGRICULTURE CODE. THIS REPORT REPRESENTS THE GROSS VALUE OF PRODUCTION AND DOES NOT ATTEMPT TO SHOW COUNTY INVENTORY, NET FARM INCOME, OR COST OF PRODUCTION.

PRICES RECEIVED FOR AGRICULTURAL COMMODITIES WERE GENERALLY HIGHER IN 1976. WALNUTS AND ALFALFA WERE PROBABLY THE BIGGEST GAINERS. WALNUT PRICES WERE UP, AND ALFALFA VALUES GAINED STEADILY THROUGHOUT THE YEAR. EXCEPTIONS TO THIS TREND WERE BEANS AND HONEY, WITH SLIGHTLY REDUCED VALUES.

AGRICULTURAL PRODUCTION GENERALLY IN 1976 REMAINED AT APPROXIMATELY THE SAME LEVEL AS 1975. THE PRODUCTION STATISTICS OF CALENDAR YEAR 1976 REFLECT MINIMAL DROUGHT INFLUENCE DUE, IN PART, TO FAVORABLE EARLY GROWING SEASON CONDITIONS. RANCHERS CONTINUED TO INCREASE LIVESTOCK MOVEMENT TO MEET CURRENT MARKET AND FEED CONDITIONS.

MOST RANCHERS AND GROWERS ARE STILL FEELING THE CONTINUED PRICE SQUEEZE OF HIGHER OPERATING AND FEED COSTS WITH LOW PROFIT MARGINS. AGRICULTURAL COMMODITY PRICES CONTINUED TO RISE, BUT AGAIN FELL SHORT OF INFLATED PRICES AND INCREASING TAXES.

INFORMATION FOR COMPILING THIS REPORT HAS BEEN OBTAINED FROM PRODUCERS, GOVERNMENT AGENCIES, REPRESENTATIVES OF AGRICULTURAL BUSINESS, AND INDIVIDUALS WHO HAVE SPECIAL KNOWLEDGE IN THEIR FIELD. THE COOPERATIVE ASSISTANCE WE HAVE RECEIVED FROM THEM IS SINCERELY APPRECIATED. THE COMPILATION OF THIS REPORT WAS UNDER THE DIRECTION OF INVESTIGATOR RICHARD PRICE.

RICHARD E. ROMINGER, DIRECTOR OF FOOD & AGRICULTURE
THE HONORABLE BOARD OF SUPERVISORS, SHASTA COUNTY

GENTLEMEN:

THIS IS A REPORT OF THE CONDITION, ACREAGE, PRODUCTION AND VALUE OF AGRICULTURAL PRODUCTS IN SHASTA COUNTY FOR THE YEAR 1977; SUBMITTED AS REQUIRED BY SECTION 2279 OF THE CALIFORNIA AGRICULTURE CODE. THIS REPORT REPRESENTS THE GROSS VALUE OF PRODUCTION AND DOES NOT ATTEMPT TO SHOW COUNTY INVENTORY, NET FARM INCOME, OR COST OF PRODUCTION.

AGRICULTURAL COMMODITY PRICES IN 1977 SHOWED A GENERAL RISE. AMONG THE BIG GAINERS WERE BEANS, NURSERY STOCK AND WALNUTS. PRICES DECLINED SLIGHTLY IN SMALL GRAINS, ALFALFA AND THE MAJORITY OF APIARY PRODUCTS.

AGRICULTURAL PRODUCTION IN 1977 SHOWED SOME MIXED RESULTS IN RESPONSE TO THE DROUGHT CONDITIONS. THERE WERE INCREASES IN PRODUCTION OF NURSERY STOCK AND MILK. IN CONTRAST, CATTLE LIVWEIGHT, SMALL GRAINS AND APIARY PRODUCTS SHOWED A GENERAL DECLINE. FUTURE CATTLE SALES WILL BE AFFECTED BY THE REDUCTION OF FOUNDATION HERDS BY THIS YEAR'S INCREASED SALES OF BREEDING STOCK.

THE COSTS OF INCREASED OVERHEAD EXPENSES AND TAXES, COUPLED WITH LOWER PRODUCTION IN SOME COMMODITIES, CREATED LOSSES FOR SOME GROWERS. INCREASED PRICES AND HIGHER PRODUCTION IN OTHER COMMODITIES OVERSHADOWED THIS LOSS AND NETTED AN OVERALL INCREASE IN AGRICULTURAL INCOME.

INFORMATION FOR COMPILING THIS REPORT HAS BEEN OBTAINED FROM PRODUCERS, GOVERNMENT AGENCIES, REPRESENTATIVES OF AGRICULTURAL BUSINESS AND INDIVIDUALS WHO HAVE SPECIAL KNOWLEDGE IN THEIR FIELD. THE COOPERATIVE ASSISTANCE WE HAVE RECEIVED FROM THIS IS SINCERELY APPRECIATED. THE COMPILATION OF THIS REPORT WAS UNDER THE DIRECTION OF INVESTIGATOR RICHARD PRICE.

ANNUAL CROP REPORT

FOR

YEAR ENDING - DECEMBER 31, 1978

SHASTA COUNTY

DEPARTMENT OF AGRICULTURE - WEIGHTS & MEASURES

TO: RICHARD E. ROMINGER, DIRECTOR, CALIFORNIA DEPARTMENT OF FOOD & AGRICULTURE
AND

THE HONORABLE BOARD OF SUPERVISORS, COUNTY OF SHASTA:

STEPHEN C. SWENDIMAN, DISTRICT 1
BESSIE L. SANDERS, CHAIRMAN, DISTRICT 2
JOHN R. CATON, DISTRICT 3
SUSAN L. EVANS, DISTRICT 4
R. D. (DAN) GOVER, DISTRICT 5

LADIES AND GENTLEMEN:

THIS IS A REPORT OF THE CONDITION, ACREAGE, PRODUCTION, AND VALUE OF AGRICULTURAL PRODUCTS IN SHASTA COUNTY FOR THE YEAR 1978, SUBMITTED AS REQUIRED BY SECTION 2279 OF THE CALIFORNIA FOOD AND AGRICULTURE CODE. THIS REPORT REPRESENTS THE GROSS VALUE OF PRODUCTION AND DOES NOT ATTEMPT TO SHOW COUNTY INVENTORY, NET FARM INCOME, OR COST OF PRODUCTION.

AGRICULTURAL COMMODITY PRICES IN 1978 WERE GENERALLY HIGHER. THOSE COMMODITIES THAT SHOWED A BIG GAIN WERE WALNUTS, PASTURE LAND, AND CATTLE. PRICES DECLINED SLIGHTLY IN HAY, BEANS, AND HORSES. (THE HORSE SALE FIGURE REFLECTS RECREATIONAL USES ONLY—IT DOES NOT INCLUDE THE SALE OF BREEDING STOCK WHICH IS BECOMING MORE IMPORTANT.) AGRICULTURAL PRODUCTION IN 1978 SHOWED MIXED RESULTS DUE TO VARYING CLIMATIC AND MARKET CONDITIONS. THOSE COMMODITIES THAT SHOWED INCREASING PRODUCTION WERE APIARY PRODUCTS, WOOL, AND WALNUTS. GENERAL DECLINES WERE SEEN IN STRAWBERRY NURSERY STOCK, APPLES, AND CHRISTMAS TREE PRODUCTION.

THE COSTS OF INCREASED OVERHEAD EXPENSES AND LOWER PRODUCTION IN SOME COMMODITIES CREATED LOSSES FOR SOME GROWERS. HIGHER PRODUCTION AND HIGHER PRICES FOR OTHER COMMODITIES ALLOWED THE OVERALL PRODUCTION AND VALUE PICTURE OF AGRICULTURE TO KEEP PACE WITH INFLATION INCREASES.

INFORMATION FOR COMPILING THIS REPORT HAS BEEN OBTAINED FROM PRODUCERS, GOVERNMENT AGENCIES, REPRESENTATIVES OF AGRICULTURAL BUSINESS, AND INDIVIDUALS WHO HAVE SPECIAL KNOWLEDGE IN THEIR FIELD. THE COOPERATIVE ASSISTANCE WE HAVE RECEIVED FROM THEM IS SINCERELY APPRECIATED. THE COMPILATION OF THIS REPORT WAS UNDER THE DIRECTION OF INVESTIGATOR RICHARD PRICE.

ANNUAL CROP REPORT

F O R

YEAR ENDING - DECEMBER 31, 1979

SHASTA COUNTY

DEPARTMENT OF AGRICULTURE - WEIGHTS AND MEASURES

TO: RICHARD E. ROMINGER, DIRECTOR, CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE
AND

THE HONORABLE BOARD OF SUPERVISORS, COUNTY OF SHASTA:

STEPHEN C. SWENDIMAN, CHAIRMAN, DISTRICT 1

BESSIE L. SANDERS, DISTRICT 2

JOHN R. CATON, DISTRICT 3

SUSAN L. EVANS, DISTRICT 4

R. D. (DAN) GOVER, DISTRICT 5

LADIES AND GENTLEMEN:

THIS IS A REPORT OF THE CONDITION, ACREAGE, PRODUCTION, AND VALUE OF AGRICULTURAL PRODUCTS IN SHASTA COUNTY FOR THE YEAR 1979, SUBMITTED AS REQUIRED BY SECTION 2279 OF THE CALIFORNIA FOOD AND AGRICULTURE CODE. THIS REPORT REPRESENTS THE GROSS VALUE OF PRODUCTION AND DOES NOT ATTEMPT TO SHOW COUNTY INVENTORY, NET FARM INCOME, OR COST OF PRODUCTION.

AGRICULTURAL COMMODITY PRICES GENERALLY POSTED BIG GAINS IN 1979. THE BIGGEST GAINS WERE IN ALFALFA, LIVESTOCK, NURSERY STOCK, AND WHEAT. PRICE DECLINES WERE SEEN IN THE OAT AND WALNUT MARKETS. RECREATION HORSES SHOWED A PRICE INCREASE THAT DID NOT INCLUDE THE IMPORTANT BREEDING STOCK MARKET. AGRICULTURAL PRODUCTION IN 1979 SHOWED SOME MIXED RESULTS BECAUSE OF VARYING CLIMATIC CONDITIONS. STRAWBERRY NURSERY STOCK SHOWED AN INCREASE IN YIELD PER ACRE DUE TO FAVORABLE GROWING CONDITIONS BUT UNFAVORABLE WEATHER AT HARVEST TIME CAUSED A SEVERE REDUCTION IN HARVESTED ACRES. THOSE COMMODITIES THAT SHOWED A SIGNIFICANT INCREASE IN TOTAL PRODUCTION WERE APPLES, GRAIN, LIVESTOCK, OLIVES AND PACKAGE BEES.

INFLATION CONTRIBUTED GREATLY TO INCREASED PRODUCTION AND OVERHEAD EXPENSES THAT WERE PASSED TO CONSUMERS IN THE FORM OF INCREASED COMMODITY PRICES. THESE INCREASED COMMODITY PRICES AND GENERALLY FAVORABLE GROWING CONDITIONS ALLOWED SHASTA COUNTY PRODUCTION IN 1979 TO KEEP UP WITH INFLATION RATES.

INFORMATION FOR COMPILING THIS REPORT HAS BEEN OBTAINED FROM PRODUCERS, GOVERNMENT AGENCIES, REPRESENTATIVES OF AGRICULTURAL BUSINESS, AND INDIVIDUALS WHO HAVE SPECIAL KNOWLEDGE IN THEIR FIELD. THE COOPERATIVE ASSISTANCE WE HAVE RECEIVED FROM THEM IS SINCERELY APPRECIATED. THE COMPILATION OF THIS REPORT WAS UNDER THE DIRECTION OF INVESTIGATOR RICHARD PRICE.

1980 Agricultural Crop Report

ANNUAL CROP REPORT

F O R
YEAR ENDING - DECEMBER 31, 1980

SHASTA COUNTY
DEPARTMENT OF AGRICULTURE - WEIGHTS AND MEASURES

TO: RICHARD E. ROMINGER, DIRECTOR, CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE
AND
THE HONORABLE BOARD OF SUPERVISORS, COUNTY OF SHASTA:
JOHN R. CATON, CHAIRMAN, DISTRICT 3
STEPHEN C. SWENDIMAN, DISTRICT 1
JOHN W. STRANGE, DISTRICT 2
DON C. MADDOX, DISTRICT 4
R. D. (DAN) GOVER, DISTRICT 5

GENTLEMEN:

THIS IS A REPORT OF THE CONDITION, ACREAGE, PRODUCTION, AND VALUE OF AGRICULTURAL PRODUCTS IN SHASTA COUNTY FOR THE YEAR 1980, SUBMITTED AS REQUIRED BY SECTION 2279 OF THE CALIFORNIA FOOD AND AGRICULTURAL CODE. THIS REPORT REPRESENTS THE GROSS VALUE OF PRODUCTION AND DOES NOT ATTEMPT TO SHOW COUNTY INVENTORY, NET FARM INCOME OR COST OF PRODUCTION.

AGRICULTURAL COMMODITY PRICES MARKED SOME BIG GAINS IN 1980. THE BIGGEST GAINERS WERE CHRISTMAS TREES, GRAINS AND ALFALFA. PRICE DECLINES WERE SEEN IN THE SHEEP, HOG AND WOOL MARKETS. VARYING WEATHER CONDITIONS PRODUCED AN INCREASE IN GRAIN PRODUCTION, FRUIT CROPS AND APIARY PRODUCTS COMPARED TO A DECREASE IN WALNUT PRODUCTION. STRAWBERRY NURSERY STOCK SHOWED GOOD PRODUCTION BUT MARKET CONDITIONS LIMITED THE TOTAL NUMBER OF HARVESTED ACRES. THOSE COMMODITIES THAT SHOWED SIGNIFICANT INCREASES IN PRODUCTION WERE SHEEP, HORSES, HONEY, NUMBER OF BEEHIVES FOR POLLINATION, AND CHRISTMAS TREES.

INFLATION WAS THE MAJOR FACTOR CAUSING OVERHEAD AND PRODUCTION COSTS THAT WERE SEEN IN THE FORM OF INCREASED PRICES AT THE SUPERMARKET. IN 1980, SHASTA COUNTY PRODUCERS BENEFITED FROM FAVORABLE GROWING CONDITIONS AND HIGHER COMMODITY PRICES THAT ALLOWED THEM TO KEEP PACE WITH INFLATION.

INFORMATION FOR COMPILING THIS REPORT HAS BEEN OBTAINED FROM PRODUCERS, GOVERNMENT AGENCIES, REPRESENTATIVES OF AGRICULTURAL BUSINESS AND INDIVIDUALS WHO HAVE SPECIAL KNOWLEDGE IN THEIR FIELD. THE COOPERATIVE ASSISTANCE WE HAVE RECEIVED FROM THEM IS SINCERELY APPRECIATED. THE COMPILATION OF THIS REPORT WAS UNDER THE DIRECTION OF DEPUTY AGRICULTURAL COMMISSIONER RICHARD PRICE.

100 YEARS DEPARTMENT OF AGRICULTURE

A. T. JESSEN PLOWING FAMILY GARDEN
IN ANDERSON CIRCA 1915

The Viticultural Act led to the need for county Horticultural Commissioners whose duties were to prevent the introduction of pests into California, and to prevent the spread of insect pests and plant diseases through regular nursery and produce container inspection programs. By 1929, the duties of the Horticultural Commissioners became so diverse that they became the Agricultural Commissioners we are familiar with today. Their duties now include fruit, vegetable and egg standardization, weed control, rodent control, seed inspections, and apiary inspections, as well as the pest detection programs.

A still vital part of the pest detection program is insect trapping. The traps serve as a detection survey to determine if the pest has been introduced. California's first documented trapping program began in Modoc County for the Cherry Fruit Fly in 1934. Basically, the trapping program consists of various types of insect traps that lure a specific insect by aromatic baits. Today, the insect trapping program for Shasta County includes the Japanese Beetle, Khayra Beetle, Gypsy Moth, and the Mediterranean Fruit Fly.

AGRICULTURAL COMMISSIONER
BRUCE WADE INSTALLS JACKSON
TRAP FOR MEDFLY

The California Department of Food and Agriculture marks its centennial year protecting the state's crops from both domestic and imported pests. California's first statewide program as a Department of Agriculture began with "An Act For The Promotion of Viticultural Industries Of The State" on April 5, 1880. This program was the direct result of the Grape Phylloxera Quarantine made two years earlier, a quarantine against a minute insect which greatly reduced vineyard yields. Then, as now, one of the principal pest detection weapons employed was called a quarantine.

THRESHING HAY IN ANDERSON CIRCA 1915

Traps are placed in key areas where the pest may show up later. For example, the Mediterranean Fruit Fly traps are placed in urban areas, preferably near backyard vegetable gardens and fruit trees where infestations are most likely to occur first. Other key locations to place traps are in parks, rest stops, and travel trailer parks that have a high exposure to travelers, a common way pests are introduced into a new area. The Gypsy Moth is a devastating defoliator of forest and shade trees and is often found as an egg mass on outdoor furniture, toys, travel trailers and cars that have come from the northeastern United States.

The traps are checked periodically and the scent bait replenished if necessary. To gain full benefit of the trapping program, the traps must be left alone. A molested trap cannot serve its purpose, and the result may be the introduction and spread of an unwanted pest into Shasta County.

Historical photos contributed by A. T. Jessen and the Shasta Historical Society.
Other photos taken by Investigator Don McBroome.

Layout by Katharine Garrison and Carol Green.

Three vertical black bars of varying widths are positioned on the left side of the page. The bars are solid black and extend from near the top to near the bottom of the page. The middle bar is the widest, flanked by two narrower bars.

ANNUAL CROP REPORT
FOR
YEAR ENDING - DECEMBER 31, 1981

SHASTA COUNTY
DEPARTMENT OF AGRICULTURE - WEIGHTS AND MEASURES

TO: Richard E. Rominger, Director, California Department of Food and Agriculture
and

The Honorable Board of Supervisors, County of Shasta:

R. D. (L , Gover, Chairman, District 5

Stephen C. Swendiman, District 1

John W. Strange, District 2

John R. Caton, District 3

Don C. Maddox, District 4

Gentlemen:

This is a report of the condition, acreage, production, and value of agricultural products in Shasta County for the year 1981, submitted as required by Section 2279 of the California Food and Agricultural Code. This report represents the gross value of production and does not attempt to show county inventory, net farm income or cost of production.

Agricultural commodity prices in 1981 showed few significant gains. There were declines in the prices for livestock and alfalfa hay. Favorable weather conditions made increases in apiary production, fruit and field crops possible. The increase in strawberry plant production also reflects the introduction of new varieties.

The value of production this year only rose two percent. The increase is far below the rate of inflation. Current economic conditions and continuing inflation are increasing the costs of production and creating hardships in marketing.

The 1981 crop report shows the value of timber production for the first time. This figure is reported because forests are a harvestable resource.

Information for compiling this report has been obtained from producers, government agencies, representatives of agricultural business and individuals who have special knowledge in their field. The cooperative assistance we have received from them is sincerely appreciated. The compilation of this report was under the direction of Deputy Agricultural Commissioner Richard Price.

C. BRUCE WADE
Agricultural Commissioner
