California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

Sutter County

1975-1981

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics, <http://giannini.ucop.edu/>.

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/>. **Please contact the Library to consult the originals.**

Dr. Luther T. Wallace, Director
California Department of Food and Agriculture
and
The Honorable Board of Supervisors
County of Sutter

I am pleased to present to you the 1975 Agricultural Crop Report as required by Section 2279 of the California Food and Agricultural Code.

The gross value of Crop and Livestock Products in Sutter County again set a new all time record high in 1975 with a total of \$187,534,900. This is 4% higher than the record year of 1974. It should be noted that the increase in the gross value of Sutter County Crop and Livestock Products was accomplished despite the fact that most farmers received less per unit for their crops. There are a few exceptions to that statement, however, if a person were to check the major crops grown in Sutter County, he or she would find that most prices were down in 1975. Rice, for instance, was down \$50.00 a ton from the 1974 figure of \$220.00 per ton and it took an additional 16,855 acres of rice in 1975 to top the 1974 cash gross for rice, and then by only a small amount.

Sutter County farmers were fortunate in that they were able to increase yields or shift to other economically competitive crops in 1975 so they showed an increased gross revenue.

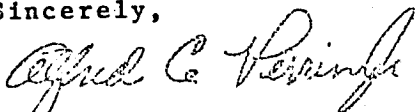

Inflation continued to take its toll during 1975 and net income did not match increased expenses. Many farmers actually netted considerably less than in previous years.

A large surplus in canned fruits and tomatoes forced prices down and caused some farmers to loose their crop due to the fact they could not find a market.

While reading this report please keep in mind that the values shown are gross values and do not reflect net profit.

I want to thank all those individuals who provided the information necessary to compile this report.

Sincerely,

Alfred C. Perrin, Jr.
Agricultural Commissioner

MR. JAMES G. YOUDE, ACTING DIRECTOR
CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE
AND
THE HONORABLE BOARD OF SUPERVISORS
OF SUTTER COUNTY

I am pleased to present to you the 1976 Agricultural Crop Report as required by Section 2279 of the California Food and Agricultural Code.

Values shown in this report are gross returns only. The 1976 crop year was an extremely rough one for growers in many areas.

First, we had a reduction in rice acreage and a lower per acre yield as the result of cool weather and a lower price resulting in a decrease of \$16,594,000 from 1975.

Canning Tomatoes, our second leading crop, suffered a loss to the cannery strike and an untimely rain which resulted in a decrease of \$9,064,000 in total sales from 1975. Increased plantings in small grains helped to offset some of these losses.

Increases were realized in tree crops, such as Cling Peaches, which surprisingly did not suffer too much from the cannery strike. Again, not all of the peaches grown were sold due to a continued lack of contracts with canners.

The drought, which began in the 1975-76 winter, showed up in increased forced sales of both sheep and cattle which resulted in an increased value of livestock sold. This will ultimately result in fewer livestock available in 1977 and losses will continue to plague growers.

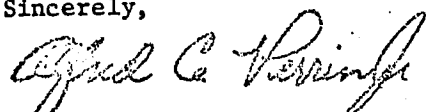

Seed crops which enjoyed good sales in 1975 were down by \$3,855,100 due to over supply on the world market.

In spite of these problems and losses the total production value in 1976 was \$178,537,000, down only \$8,997,900 from the 1975 figure which was \$187,534,900.

Agriculture continues to be the leading industry in the County.

A sincere thanks is due all who provided information for this report.

Sincerely,

Alfred C. Perrin, Jr.
Agricultural Commissioner

Mr. Richard E. Rominger, Director
California Department of Food and Agriculture
and
The Honorable Board of Supervisors
of Sutter County

The Sutter County Agricultural Crop Report for the 1977 calendar year is submitted to you in accordance with the provisions of Section 2279 of the California Agricultural Code.

The total GROSS value of all crops, livestock and livestock products was \$200,877,000 which is an all time high for Sutter County. It is also the first time in the history of Sutter County Crop Reports that the 200 million dollar figure has been reached.

While the affects of the drought is not readily seen in this report it showed up in each growers expense account.

Over 500 new wells were dug in the county at tremendous expense in order to insure an abundant supply of water to crops.

The drought very definitely caused problems with cereal grains and a close look at the Crop Report shows that acreage devoted to cereal crops dropped from 192,794 acres in 1976 to 146,691 acres in 1977, a drop of 46,103 acres. There was also a substantial drop in gross income from \$64,276,600 in 1976 to \$50,155,500 in 1977, a drop of over \$14,000,000.

Considerable acreage of rice was not planted because the farmers were not assured that they would have enough water to grow the crop. A substantial acreage of farmland that is normally double cropped was left idle after the first crop was harvested due to the lack of water.

The major reasons for the increased gross values in the 1977 Crop Report can be seen by looking at the Fruit and Nut Crops where there was an increase in gross value of \$10,647,700 over the 1976 gross income. This was done with approximately the same acreage. Yield increases and better prices are both attributed to the better income. The next area to look at is the Canning Tomatoes. There is an increase of 9,260 acres which show an increase in yield per acre and an increase in the price per ton received. This all adds up to a \$21,146,000 increase in gross value received by farmers over the 1976 year.

A combination of circumstances caused by the drought actually caused this situation in the Canning Tomato increase. One instance is that many Yolo County tomato farmers leased land for growing tomatoes in Sutter County because they could not get enough water in Yolo County to grow the tonnage they had contracts for. Tomatoes take less water to grow, therefore, they replaced rice with tomatoes and reduced water needs. Many acres of rice land with a potential of \$600. gross per acre were farmed to tomatoes where the average gross is over \$1,300 per acre.

The farmer is not necessarily making more money just because the values received for their crops has gone up or they have produced more and are grossing more.

The Agricultural Extension Service has been unable to keep all data current because of the rapidly rising costs of farming in relation to all costs such as land, equipment, fertilizers, pesticides, etc., but they do know that in many of our crops the profit margin is extremely slim. I have enclosed two pages from the USDA Agricultural Handbook No. 524 that points out very vividly the problems faced by farmers all over the Nation. A close look at the information reveals that production expenses are taking a greater percentage of the gross income and that inflation is taking a heavier toll on the farming community.

A few examples of production costs provided by the Agricultural Extension Office in Sutter County:

<u>Crop</u>	<u>Cost Per Ton To Produce</u>	<u>Average Price Per Ton Received By Sutter County Farmers</u>
Canning Tomato	51.41	56.10
Prunes	491.67	500.00
Rice	156.60	190.78

These are average figures and do not reflect poor production or individual problems that might arise in any farming operation.

The main concern of the Department of Agriculture is that there be a better public understanding of the complexities of farming and that the gross figures reported by this report are only part of the total picture.

The 200 million gross income is good for Sutter County because it is reflected many times over in the community.

We wish to express our sincere appreciation and thanks to all those who provided information for this report.

Sincerely,

Alfred C. Perrin Jr.

Alfred C. Perrin, Jr.
Agricultural Commissioner

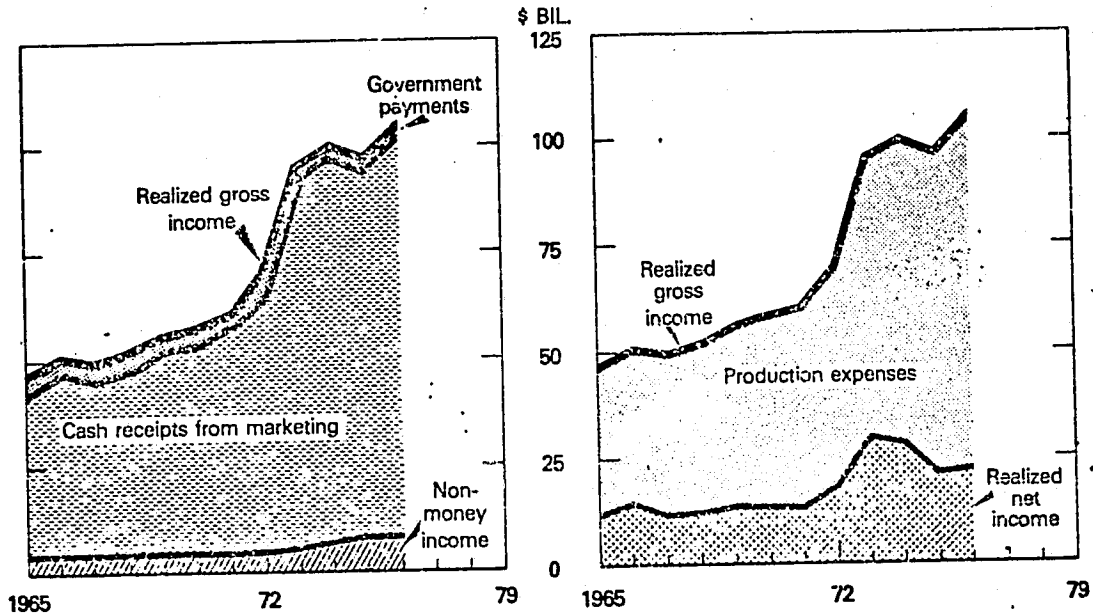

INCOME

Following years of fairly steady growth, cash receipts jumped during the early 1970's, as the result of reduced crop supplies worldwide. With a rebuilding of grain supplies in the mid-1970's, crop prices are again seeking a floor, triggering economic and political pressures to return Government payments as a significant component of gross farm income. Too, during the

recent decade, an imputed rental value for farm dwellings has dominated the "realized non-money and other income" category.

Although the income components yield a generally upward but erratic realized gross income, a steadier and more persistent growth in the producer's expenses etches a much more volatile realized net farm income.

INCOME

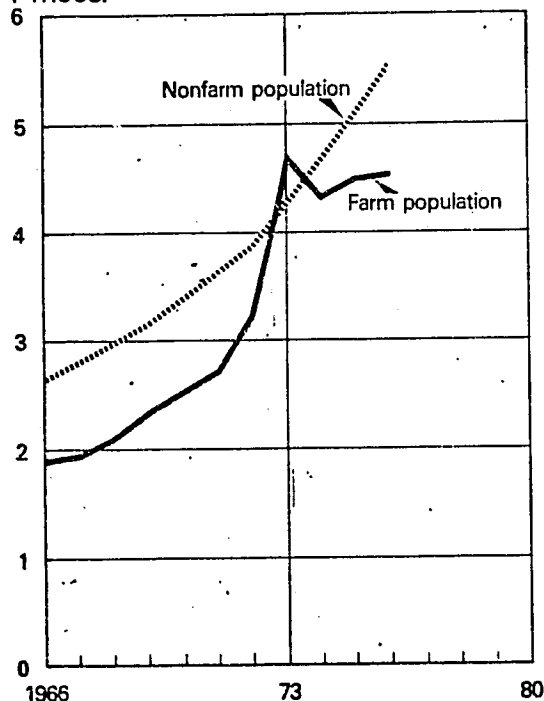

Per capita income of the farm population fluctuates more than that of the nonfarm. However, during most years a substantial proportion of the farm population receives significant amounts of income from nonfarm sources. In recent years, it is estimated that farm operators with sales of less than \$20,000 (around 70 percent of all farms), average more than half their

disposable income from off-farm sources.

Realized net farm income plus or minus the value of the physical change in inventories yields total net farm income. Because of general inflation in the prices paid by farmers for family living items, the purchasing power of this total net income has plummeted from its peak in 1973 to its lowest level of the decade.

R. Richard E. Rominger, Director
California Department of Food and Agriculture
and
The Honorable Board of Supervisors
of Sutter County

We respectfully submit to you the Sutter County Agricultural Crop Report for the 1978 calendar year in accordance with the provisions of Section 2279 of the California Agricultural Code.

The total Gross value for all farm products, crops, live-stock and livestock products again reached an all time record high for Sutter County. The \$210,785,100 figure is nearly a 5 percent increase over the 1977 gross of \$200,897,800. This means that the increase in the value of agricultural production in Sutter County did not keep pace with the rate of inflation in the U.S. We point this out even though we know there are a number of other factors that influence the prices received for agricultural commodities, because it is important for the general public to understand that inflation affects farmers just as much if not more than everyone else. The American Farmer is caught in the middle of the vicious inflation squeeze. He has watched the prices of the goods and services he requires soar, but has been unable to obtain equal compensation for his goods. A recent publication of Business Statistics shows that on the average, prices received by farmers for all agricultural products are only 66 percent of parity using 1910-14 as the base period. This is not to say that farmers should be getting 100 percent of parity, but to point out what a great job the American Farmer (Sutter County Farmer) has been doing these past sixty some years to enable him to continue producing food in great abundance.

The question we have to ask now is this. Has the American Farmer (Sutter County Farmer) reached the point where he can no longer overcome the obstacles he is facing? Only time will tell.

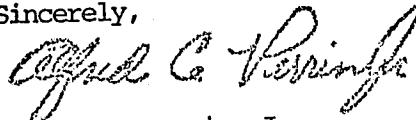

A few highlights of the 1978 crop report show that tomatoes continued to hold their number one spot in value in Sutter County, with rice a close second. These two crops represent almost 37 percent of the total value of all the agricultural commodities raised in Sutter County. The ten leading crops represents just

over 80 percent of the total value of the agricultural production in Sutter County.

Fruit and Nut Crops along with Livestock and Poultry showed substantial gains in value due mainly to better prices received, while Field Crops and Vegetable Crops were down somewhat in value due to lower prices and yields.

We want to thank all those that provided the information necessary to compile this report.

Sincerely,

A handwritten signature in cursive script that reads "Alfred C. Perrin, Jr.".

Alfred C. Perrin, Jr.
Agricultural Commissioner

LOURIE G. GASCHKE
Assistant Agricultural Commissioner
Assistant Air Pollution Control Officer

Mr. Richard E. Rominger, Director
California Department of Food and Agriculture

and

The Honorable Board of Supervisors
Sutter County

I respectfully submit to you the Sutter County Agricultural
Crop Report for the 1979 calendar year in accordance with
Section 2279 of the Food and Agricultural Code.

The total gross value of agricultural production in Sutter
County reached a new high of \$258,535,900 which is an increase
of \$38,033,200 over the 1978 production value of \$220,502,700.

Again I hasten to remind you that gross values do not take into
consideration inflation and spiraling costs in all phases of
growing and marketing of these crops.

Without the cooperation of all segments of agribusiness, it
would be impossible to prepare an accurate, meaningful report.
My sincere appreciation to all for their efforts.

To Lou Gaschke, my assistant, special thanks for preparation
of the report.

Sincerely,

Alfred C. Perrin, Jr.
Agricultural Commissioner

LOURIE G. GASCHKE
Assistant Agricultural Commissioner
Assistant Air Pollution Control Officer

Richard E. Rominger, Director
California Department of Food and Agriculture
and
The Honorable Board of Supervisors
Sutter County

I hereby submit to you the 1980 Agricultural Crop Report in compliance with the requirements of Section 2279 of the California Agricultural Code.

The gross value of all crops, livestock and livestock products was \$299,064,300 in 1980, an increase of almost 16 percent over the 1979 gross value of \$258,666,900. Field Crops, mainly beans, rice and wheat, were the headliners and the main reason that field crop values in 1980 rose \$45,185,900 over the 1979 gross.

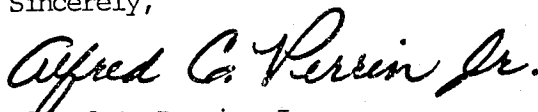

Rice clamped a stronghold on the number one position in the county, grossing over 26 percent of the total crop and livestock value with its \$78,238,000 gross value.

I would like to point out that this crop report should be studied carefully as it shows that some areas of crop production are having a difficult time. Costs of production continue to rise, yet prices received by farmers does not. A good example during the 1980 season was canning tomatoes which fell from \$56.70 a ton in 1979 to \$47.70 a ton in 1980. There are others and a careful look at the crop report will disclose them.

Agriculture continues to be the number one industry in Sutter County despite the problems it has encountered throughout the years. Using a common multiplier of four times the gross as an indicator of the total effect, we come up with a figure of \$1,196,257,200. What a tremendous boost this is to the economy of Sutter County.

I want to thank all those who contributed the information that made this report possible. We appreciate your efforts.

Sincerely,

Alfred C. Perrin, Jr.
Agricultural Commissioner

RICHARD E. ROMINGER, DIRECTOR
CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE
AND
THE HONORABLE BOARD OF SUPERVISORS OF
SUTTER COUNTY

It is with great pleasure that I respectfully submit to you the Sutter County Agricultural Crop Report for the 1981 calendar year in accordance with Section 2279 of the California Food and Agricultural Code.

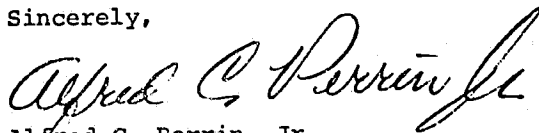

The gross value of all agricultural production in Sutter County topped the 300 million mark with a total of \$316,465,000. This is a 5.5% increase over last year's adjusted gross total of \$299,014,700. You should note that the 5.5% increase does not keep up with the double digit inflation we had in 1981.

Rice continued to be the leading crop in the county with a value of \$87,680,000 or almost 28% of the total county crop and livestock value. The ten leading crops in value in Sutter County accounted for almost 80% of the total county crop and livestock value. They include rice, prunes, peaches, tomatoes, wheat, walnuts, dry beans, cattle and calves, hay and pears. Sutter County continues to be the leading agricultural county in the Sacramento Valley and is among the top 15 counties in the State.

Agriculture plays a much greater role in the economy of Sutter County than most of the people living here realize. Just about every business in the county is affected by how well agriculture fares with regard to production and sales of their products.

A special thank you to all those persons and businesses who took the time to furnish us with the information that made this report possible.

Sincerely,

Alfred C. Perrin, Jr.
Agricultural Commissioner
