California Department of Food and Agriculture

Agricultural Commissioners' Crop Reports

# Ventura County

1924-1941

California County Agricultural Commissioners' Reports from the California Department of Food and Agriculture. This collection consists of annual crop and livestock data from each of the 58 California Counties. The collection covers 1915-1981; digitization of the rest of the collection is forthcoming.

This digitization project was funded by the Giannini Foundation of Agricultural Economics,  
<http://giannini.ucop.edu/> .

The work was completed by the staff of the Giannini Foundation Library, University of California, Berkeley, <http://are.berkeley.edu/library/> . **Please contact the Library to consult the originals.**

#### VENTURA COUNTY DAIRY REPORT. YEAR 1929

The following information on the Dairy Industry of Ventura County was furnished this office by Dr. J. A. King, County Health Officer, and M. A. Heinzman, Milk Inspector

Total Number of Dairies in Ventura County.....	35
Total Number of Creameries in Ventura County.....	2
Daily Production of Milk (Gallons) .....	4,600
Total Number of Dairy Cows in Ventura County.....	2,038
Total Sales of Dairy Products .....	\$1,135,000.00
Percentage of Milk .....	70% Raw and 30% Pasteurized

Crop Report of 1929 shows an increase over that of 1928 of \$2,177,439.70. Although the citrus crop did not bring in the amount that it did in 1928, the beans showed quite a decided increase. Hay also shows considerable increase. Sugar beets are somewhat less than in 1928. Grains show approximately 100% increase over 1928. Under the heading of citrus, miscellaneous subhead, shows quite a difference between the packed box average and the field box average, the field box bringing considerable more money than the packed box. This is accounted for by reason of the fact that the field box item was composed mostly of tangerines which brought a very good price during the past season. There is quite a considerable increase on returns of miscellaneous fruits. Vegetables brought approximately the same amount of money as they did in 1928.

**VENTURA COUNTY DAIRY REPORT—YEAR 1932**

The following information on the Dairy Industry of Ventura County was furnished this office by Dr. A. A. Maulhardt, County Health Officer and M. A. Heinzman, Milk Inspector.

Number of Dairies in Ventura County.....	34
Number of Distributors (Non-Producers).....	4
Number of Producer-Distributors.....	25
Number of Wholesale Producers.....	9
Total volume of milk sold daily in County.....	Gallons 2,850
Percentage of milk sold raw Grade A.....	66%
Percentage of pasteurized milk sold Grade A.....	33%
Percentage of Certified and Guaranteed Raw.....	1%
Number Gallons of cream sold daily.....	50
Estimated total sales in County.....	\$ 525,000.00
Estimated return to dairymen who are shipping their milk to Los Angeles.....	\$ 146,975.00
Estimated total return to dairymen.....	\$ 671,975.00

The following is a brief summary of the dairy industry in Ventura County for the year ending, December 31st, 1933. This report covers only Market milk. I regret to state that the State Division of Agriculture does not furnish this department with reports on tuberculin testing of dairy cattle and we have no record of the number of milk cows in the county.

Number of Dairies in Ventura County	38
Number of Distributors (Non-producers)	5
Number of Producers-Distributors	28
Number of Wholesale Producers	10

ORIGINAL DEFECTIVE

Number of Wholesale Producers.....	3,087 gals.
Total Volume of Milk Sold Daily in Ventura County (Grade A) .....	500 gals.
Total amount of Milk separated for Cream daily .....	65%
Percentage of milk sold as Grade A Raw .....	34%
Percentage of Pasteurized Grade A Milk .....	1%
Percentage of Certified and Guaranteed .....	50 gals.
Number of gallons of cream sold daily.....	\$560,000.00
Estimated total sales in County.....	
Estimated return to dairymen of County who are selling their products in Los Angeles County.....	128,000.00
Estimated total return to dairymen .....	\$688,000.00

While the gross income to our dairymen has remained on about the same level as in 1932, considerable progress has been made in remodeling barns, construction of new ones, installation of refrigerating machinery and other improvements.

The volume of milk shipped out of this county has increased considerably and the amount received from the sale of this milk should have been higher but on account of a milk war in Los Angeles prices to producers were lowered. The dairy situation in this County should improve and in time the Oxnard Section on account of climate, accessibility to the Los Angeles Market, abundance of water and feed will bring people from Los Angeles County to this area.

Information on Dairies furnished by A. A. Mauthardt, County Health Officer and M. A. Heinzman, County Milk Inspector.

I believe that due to the present economic condition that an explanation of the following crop report would be in order, that is, to show what percentage or what amount of the F.O.B. return the producer of the commodity gets. These costs of production, or packing figures, will be given on the six major crops of the county.

Oranges show a price varying from \$1.88 to \$1.34 per packed box. Of this price, 50c is used for labor alone, leaving from 84c to \$1.38 to cover the costs of packing material, such as boxes, wrappers, labels, etc., to the maintenance of packing house and packing house equipment, taxes, interest, and depreciation on farm properties. With these deductions, there is, at the price of last season's oranges, no profit for the producer.

Lemons show that the average price was \$3.60 per packed box throughout the county. Of this amount \$1.48 was paid out for labor alone, which amount was 11% of the total price received,

13% of the \$3.60 per box was taken up in cultural costs, interest, taxes, etc., leaving in this case only 16% of the F.O.B. price for the grower. In other words, labor in this commodity received far more from each box of lemons than did the grower himself.

Apricots averaged \$170 per ton for dried fruit. Of this amount, \$60 has to be deducted for drying costs and grower estimate that the cost of producing this fruit in the way of labor and cultural costs amount to another \$60 per dried ton, leaving only \$50 per dried ton for the producer of the crop to pay his fixed costs.

In the case of lima beans, which of course is the largest bean crop we have in the county, the returns show an average of \$5.25 per bag. Of this amount, \$2.22 went for labor. In addition to the labor cost is a cost of maintaining equipment, such as threshing equipment, purchase of bags, and other fixed costs that have not been taken into consideration.

Sugar beets show a return to the county this year of \$837,564.72. Of this amount, \$330,000 went for labor alone.

Walnuts show a return of approximately \$280 per ton average, of which \$46 per ton was paid up in the paying of labor. In the case of walnuts there is a great additional cost in the maintaining of proper packing equipment and buildings, maintaining dehydrators, and purchase of material for the proper preparation of the product, which will take up a large proportion of the remainder of the \$280 per ton. This \$46 a ton for labor does not take into consideration the amount of labor involved in handling the culls. This would run into a considerable sum of money, but figures are not available on short notice as to the amount of the item.

A general analysis of this crop report will clearly show that so far as profit is concerned, the labor of Ventura county actually received more money from the production of agricultural crops than did the producer himself.

\$17,176,962.56

The following is a brief summary of the dairy industry in Ventura County for the year ending December 31st, 1934. This report covers only market milk and dairies under the supervision of this department:

No. of dairies in Ventura County .....	40
No. of Producer Distributors .....	31
No. of Wholesale Producers .....	9
No. of Distributors (Non Producers) .....	3
No. of Dairy Cows .....	2713
Average Volume of Milk Daily in Gallons .....	6,500
Average Volume of Milk Consumed Daily in County .....	3,270
Average Volume Separated for Cream Daily in County .....	730
Average Volume Shipped out of County in form of Market Milk, Buttermilk, Ice Cream, Ice Cream Mix (Daily in Gallons) .....	2,500
Average Volume of Milk Shipped into Ventura County Daily for Market Milk .....	80
Percentage of Milk Sold as Guaranteed and Certified Milk .....	15%
Percentage of Milk Sold Daily Grade A Raw .....	60%
Percentage of Milk Sold Daily Grade A Pasteurized .....	25%
Estimated Total Sales in Ventura County—Milk, Cream, Ice Cream Manufactured from Milk Produced in Ventura County .....	\$551,700.00
Estimated Revenue to Ventura County Dairymen of Products Shipped out of County .....	161,068.00
	\$712,768.00

While the total production of milk has increased, the gross income to our dairymen has not kept up in proportion, due to the cut in the price of milk to 11c per quart. The dairymen have spent large sums of money in remodeling barns, installing new equipment and other improvements. The volume of milk being shipped out of the County has increased about 5% and the average price paid has been stabilized by the marketing agreement. The dairy industry in this County should improve during the coming year. Information on Dairies furnished by A. A. Maulhardt, County Health Officer, and M. A. Heinzman, County Milk Inspector.

In following out the procedure established last year in the issuing of the annual crop report of Ventura County, I wish to point out that the income from agriculture this year is considerably more than it was in the year 1933. This increase is due in some cases to increased volume in production and in others to an increased price. One point must be borne in mind that this increase is spread over a larger number of orchards than in previous years inasmuch as many orchards in this County are just coming into bearing. There has been approximately 10% increase in the cost of growing and handling of crops exclusive of labor which has had a general increase throughout the industry. For example, labor cost in the production of lemons has increased as follows: common labor 12%, woman labor 32%; Walnuts: common labor 6%, woman labor 11%; beets: labor 10%; oranges: 12% increase in cost of supplies, 17% picking cost increase, 12% increase in house labor.

A final analysis shows the increase in production and increase in price has resulted in a gain not only for the producer but in the same proportion for labor.

The following is a brief summary of the dairy industry in Ventura County for the year ending December 31st, 1935. This report covers only market milk and market cream produced under supervision of this department.

No. of Dairies	34
No. of Producer Distributors	24
No. of Wholesale Producers	10
No. of Distributors (Non Producers)	3
No. of Dairy Cows	2,965
Average Volume of Milk Produced Daily in Gallons	7,000
Average Volume Consumed Daily in Ventura County for Market Milk	3,500
Average Volume Separated Daily for Cream	600
Average Volume Shipped Out of County in Gallons of Milk Whether in Form of Milk, Cream, Ice Cream Mix or Ice Cream	2,900
Average Volume Shipped into Ventura County for Use as Market Cream or in the Manufacture of Ice Cream or Ice Cream Mix—Gallons Daily	200
Percentage of Milk Sold as Guaranteed Raw	16%
Percentage of Milk Sold as Guaranteed Pasteurized	3%
Percentage of Milk Sold as Grade A. Raw Milk	61%
Percentage of Milk Sold as Grade A Pasteurized	20%
No. of Gallons of Cream Sold Daily (Raw and Pasteurized)	
Estimated Total Sales in Ventura County of Milk, Cream, Ice Cream Manufactured from Milk Produced in Ventura County	\$618,634.00
Estimated Revenue to Ventura County Dairymen, Milk Plants, of Products Shipped Out of County	134,300.00

\$752,934.00

This represents an increase of approximately \$40,000.00 over the gross income of dairy products in 1935. Milk is retailing at 11 cents per quart for Grade A and 12 cents per quart for Guaranteed Milk. One new dairy was constructed during the past year and remodeling was carried out in several dairies. Seven small retail dairies discontinued business in 1935.

A comparison of the crop report of 1935 over that of 1934 shows that we have an increase in the returns from agriculture in the amount of \$1,242,005.64. An analysis of this increase develops an interest

	\$752,934.00

This represents an increase of approximately \$40,000.00 over the gross income of dairy products in 1935. Milk is retailing at 11 cents per quart for Grade A and 12 cents per quart for Guaranteed Milk. One new dairy was constructed during the past year and remodeling was carried out in several dairies. Seven small retail dairies discontinued business in 1935.

A comparison of the crop report of 1935 over that of 1934 shows that we have an increase in the returns from agriculture in the amount of \$1,342,095.64. An analysis of this increase develops an interesting fact that even with the increase in returns the producer as a rule actually received less money than he did the previous year. In many cases the unit price of 1935 was less than that of 1934 and the increase is due to a larger production. With a lower unit price and the increase in production, labor benefits by the increase, to a greater extent than does the producer as the larger the crop of course the more labor involved. As an example one packing house shipping lemons returned to the grower in 1934 \$1.304 per field box on the tree, that is with the picking, hauling and packing expense paid, while in 1935 the same house, although they received considerable more money, paid only \$ .614 to the grower on the same basis, as against a ten year average of \$1.148.

This pertains not only to citrus but also in the case of walnuts.

Another item in the cost of producing lemons that affects the return to the grower is that of by-products. In 1934 approximately 5 per cent of the crop went for by-products while in 1935 19 per cent went for this purpose. So far as the producer is concerned the cost is the same for producing by-products fruit as it is for the fruit that is ultimately shipped to market, but for by-products only one-quarter cent per pound is received by the grower. With this great increase in percentage of fruit going to by-products, that is approximately a 300 per cent increase, means just that much decrease in the returns to the grower.

The unit price of beans was a trifle higher this year than the previous year but the production was somewhat less.

An analysis of unit prices received during the past ten years shows that in the case of lemons the price was lowest this year; valencia oranges had two years in which the price was lower than that of this year; walnuts had two years; beans had four years; apricots had four years. This analysis I believe shows that in years of large crops and with conditions such as was faced by the agriculturist this last year that labor and the manufacturer of the materials that are used in the handling of the crop, benefit to a greater extent than does the actual producer of the commodity.

This year's report also shows benefit payments on sugar beets received during the past three years from AAA in their crop control program.

The largest percentage increase on any one individual item was that of celery. This increase was from 65 cars to 277 cars with a price increase of \$169,112.50.

The following is a report of the Dairy industry in Ventura County for the year ending December 31st, 1936. This report covers market milk and cream produced under the supervision of this department.

No. of Dairies	32
No. of Producer Distributors	23
No. of Wholesale Producers	9
No. of Distributors (Non Producers)	3
No. of Dairy Cows	3,250
Average Volume of Milk Produced Daily in gallons	7,500
Average Volume Consumed Daily in Ventura Co.	3,750
Average Separated Daily for Cream	600
Average Volume Shipped Daily to Los Angeles	3,150
Average Volume of Cream Shipped into County Daily Gals.	100
Percentage of Milk Sold as Guaranteed Raw and Guaranteed Pasteurized	25%
Percentage of Milk Sold as Grade A Raw	50%
Percentage of Milk Sold as Grade A Pasteurized	25%
Estimated Total Sales in Ventura County of Milk, Cream, Ice Cream Manufactured from Milk Produced in Ventura County	\$715,250.00
Estimated Total Sales in Ventura County of Milk, Cream, Ice Cream Manufactured from Milk Produced in Other Parts of County	\$296,000.00
	\$921,250.00

This represents an increase of \$170,216.00, in gross Revenue over 1935.  
Grade "A" Milk is now retailing for 12 cents per qt., Guaranteed Milk 13 cents per qt.  
Two new Dairies were completed and remodeling was carried out in several Dairies. Five small Dairies discontinued business in 1936.

Respectfully submitted,  
A. A. MAULHARDT, M. D.  
County Health Officer.  
M. A. HEINZMAN  
Sanitary and Milk Inspector.

An analysis of the 1936 Crop Report for Ventura County shows that more than 50% of the total agricultural income was derived from citrus. Of interest in connection with the citrus returns is a recent report by Paul S. Armstrong, General Manager, California Fruit Growers Exchange.

"The 1936 citrus crop of California sold in the primary markets for about 150 million dollars. Of this sum first deduct 40 million for freight and refrigeration, over half of which is said to go directly to railroad labor as wages. Marketing expenses, including advertising, take about 5 million for all shippers. Wages for labor take approximately 30 millions, divided roughly 18 million in the groves and 12 million to packing house workers.

"Orchard supplies such as fertilizer, water, pest control and orchard heating take another 18 millions, and packing house materials chiefly boxes, wraps and processing materials 10 million more. These materials come from numerous industries which in turn employ labor.

"We now have left out of our original sales value in the markets of 150 million dollars, about one-third or 50 millions available to the 18,000 growers, with which to meet interest charges or return on the capital invested, much of which is borrowed from banks and other lenders; also depreciation on trees or money set aside to replace the trees when they need it, and margin for profit or reserve."

In analyzing these figures in comparing them to Ventura County it would show that although we received somewhat in excess of \$12,000,000 from our citrus crop, the producers received only approximately one-third of the total income. From the one-third they must still pay their interest on their property value also depreciation of trees.

One new item is added to this 1936 crop report, that is the return on eggs. This figure is based on the production from flocks of one hundred hens or over.

## SURVEYS - 1952

This year county personnel have again been engaged in pest surveys to determine the possible presence of pests not of general occurrence within Ventura County. With continued population growth within the county the possibility of introduction of agricultural pests by persons not acquainted with the importance of pest control becomes greater. Thus the annual surveys by trained inspectors become increasingly important.

If a new pest becomes well established in an area, eradication becomes a very expensive and difficult process. The chances of successful eradication are also decreased as the pest becomes widespread. The detection of new pests as soon as possible after entry into the county is therefore very important.

### GENERAL PEST SURVEY

Inspection of all city and rural yards within the county was again made this year. The purpose of the general pest survey is to discover any incipient infestations of new pests.

New agricultural pests are often introduced into an area on ornamentals used in landscaping of residential yards. If these pests can be found before they spread to commercial plantings the chance of eradication is much greater. Host plants of red scale and other scale insects and of white fly are given special attention by trained county inspectors.

If serious citrus pests now under eradication within the county are found, all host plants are treated in a manner that will most effectively eradicate the insect or disease. This work is done in cooperation with the citrus protective organizations within the county.

Following is a summary of work done in 1952:

DISTRICT	YARDS INSP.	HOST PLTS. INSPECTED	YARDS INFES.	SCALE INSECTS				TREATMENT		
				Red	Chaff	Purple	Dicto.	Host Fumig.	Host rem.	
Ventura	3,500	24,500	23	4	5	14	0	0	72	8
Oxnard	2,700	18,900	34	33	0	0	1	0	155	9
Santa Paula	1,100	7,700	4	3	0	0	1	13	0	1
Moorpark	2,300	16,100	52	52	0	0	1	-	582	0
Ojai	1,200	8,400	2	2	0	0	0	21	21	0
Camarillo	650	4,250	1	1	0	0	0	19	19	0
Fillmore	900	5,600	3	3	0	0	0	21	0	0

### MEXICAN BEAN BEETLE

In collaboration with the State Department of Agriculture the county again made a survey of all bean acreage within the county to determine the possible presence of the Mexican bean beetle.

The county furnished a crew of 11 survey men, one supervising inspector and one deputy in charge of the county project. Inspection of yard plantings in Oxnard, El Rio, Hueneme and Nyland Acres as well as commercial acreage within

The 1949 and 1950 infested areas was done by county crews. A total of 4,344 county man hours was spent in the survey this season. For the second consecutive year no bean beetles were found.

### QUICK DECLINE OF CITRUS

Again this year the county, in cooperation with the State Department of Agriculture, conducted a survey of all the orange acreage within the county to determine the spread of quick decline of citrus. Inspection showed that the disease has now build up within the infected zones to an extent which will cause an economic loss to growers. A total of 619 suspect trees were found. Samples of bark were taken from 42 trees and sent to the state plant pathology laboratory to determine whether a microscopic examination of tissues would reveal conditions resembling those found in trees known to have quick decline. Although the virus is increasing in intensity within the infected areas, no trees resembling quick decline were found outside the quarantined area.

### ORIENTAL FRUIT FLY

The Oriental fruit fly survey by means of an extensive trapping program was continued this year within the county. During the spring and summer, 100 traps were distributed throughout the county and serviced weekly by a county inspector. Traps and baits were furnished by the State Department of Agriculture.

As reports were obtained from Hawaii of the substantial reduction of population of the Oriental fruit fly due to successful biological control, it was felt by state entomologists that the possibility of introduction of the pest into California through ports of entry was considerably reduced. Consequently, during late summer and fall the number of traps within the county was reduced to 25 and the district inspectors were made responsible for the maintenance of the traps within their districts. No Oriental fruit flies were found.

### WALNUT HUSK FLY

Again this year the county cooperated with the walnut houses and walnut growers in distributing bait pans for a walnut husk fly population survey. There was some spread westward from Santa Paula with flies being trapped in groves approximately half way between Santa Paula and Wells Road near Saticoy. A considerable build-up in population was noted within the previously infested areas. Several groves experienced rather severe damage.

### RED SCALE

An inspection was made of citrus groves suspected of being infested with red scale when these groves were not affiliated with any citrus protective league. A tree to tree inspection was made by county inspectors and whenever red scale was found the grove was treated in a manner prescribed for eradication.

### JAPANESE BEETLE

Japanese beetle traps were placed around airports, depots, and other likely ports of entry. These were serviced by district inspectors during the season of adult beetle flight. No Japanese beetles were taken.

### LYGUS BUG

A survey of bean acreages to determine the population counts of Lygus bug infestations was again made this year. The survey covered 46 properties totaling 4,312 acres. Dangerous population counts were noted three weeks earlier than in 1951. In most cases growers were willing to use control measures and in many instances indicated their appreciation for the survey service.

### TOMATO CANKER

As a service to seed growers a survey of tomato plants grown for seed was made by county inspectors. Three inspections per field was made to determine the possible presence of tomato canker. If findings are negative, the seed may bear a label certifying it as seed grown in a field in which no bacterial canker is known to exist.

### ELM LEAF BEETLE

This year for the first time elm leaf beetle was found in Ventura County. This beetle attacks only elms and in severe infestations will completely defoliate a tree by skeletonizing the leaves.

When this pest was first discovered in the Cuyama Valley a survey of elm plantings in the area was made. Fortunately only one yard was found infested and a spray program carried out in an attempt to eradicate the insect. This work is to be followed with subsequent inspections and treatments during the spring and summer of 1953.

### GOLDEN NEMATODE

The county in cooperation with the U. S. Department of Agriculture made a survey for golden nematode. This is a serious species of nematode which is not known to occur in California. The survey is made by taking a given number of soil samples from fields on which host plants of the golden nematode have been grown for several years. Tomatoes are a preferred host of the parasite and in Ventura County soil in which tomatoes had been grown for several seasons was examined. In the laboratory the soil samples are carefully washed and inspected under a microscope. All findings were negative.

PORT INSPECTION

The inspections of incoming ships at our local harbor is carried out by staff members of the Commissioner's office. Ship stores, cargo and other items are carefully inspected to safeguard against the spread of serious insect pest and diseases. Garbage disposal is supervised by local inspectors to safeguard against the danger of foot and mouth disease.

No. of Boat inspections . . . . . 32  
No. of hours used in inspection . . . . . 134

TOMATO SEED CERTIFICATION

Working under the authority and direct supervision of the State Department of Agriculture, county personnel inspected tomato plants to be used in the production of tomato seed for the purpose of determining the presence or absence of bacterial canker.

At least three inspections were made over the entire acreage at various stages of growth. Harvesting and processing of the seed was also under the direct supervision of inspectors. Certificates were issued on those lots of seed that met all of the requirements.

Hours spent on certification . . . . . 164

INSPECTION OF CITRUS FRUIT SHIPPED TO FLORIDA

Florida regulations for citrus fruits from California require inspection and certification of all fruit destined for the state of Florida. Inspections are made at the time of washing and packing to see that no fruit infected with brown rot is allowed to be placed in the container. This requires an inspector to be present at all times during the packing process.

No. of cars inspected . . . . . 88  
No. of trucks inspected . . . . . 7  
  
No. of hours spent on inspection . . . . . 477

SEED INSPECTION

Inspections are made on lots of seed to insure proper labeling as to germination and purity. The work is carried out by a seed inspector and inspections are made in warehouses, seed stores, supply stores, retail stores, etc.

No. of lots of local seed inspected . . . . . 773  
No. of lots of interstate shipments . . . . . 246  
No. of lots of intrastate shipments . . . . . 966  
No. of lots in violation . . . . . 44  
No. of service samples drawn . . . . . 0  
No. of official samples drawn . . . . . 0  
No. of stop sale orders issued . . . . . 5  
  
Hours spent on seed inspection . . . . . 508

## STANDARDIZATION

Citrus packing houses were regularly checked for fruit and packing defects, and all fruits and vegetables were checked in the packing houses or in the fields at the time of packing. Retail outlets were also checked to insure the produce met the minimum state standards.

Increased vegetable acreage took more time for inspection and certification.

Eggs were inspected at retail channels by one inspector.

The fine cooperation of packers and shippers continued to make enforcement easier and better.

Following is a summary of the work:

No. of containers inspected	1,176,051
No. of containers rejected	2
No. of shipments certified	5,298
No. of containers certified	1,114,133

### EGGS:

No. of premises visited	154
No. of lots inspected	628
No. of dozens inspected	64,194
No. of dozens rejected	1,545
Hours spent on Standardization	3,707

## WEED CONTROL

Weed control has become a major problem with all persons growing food crops. In order to assist the ranchers in better control of these pests, advice was given freely to those concerned.

A stringent weed control program was carried out along all county roads during the past season in controlling primary and secondary noxious weeds. Contracts were entered into with the California Division of Highways for the control of certain noxious weeds along state highways. Cooperative agreements were made with the Southern Pacific Railroad for surveying and controlling certain noxious weeds along right-of ways. Cooperative agreements were made with our county parks division for the control of poison oak in all county parks. Surveys were made at various times during the year for new infestations of weeds not common in our county. One infestation of quack grass was found and the area placed under eradication treatment.

Several new locations of yellow star thistle were recorded and these too were placed under eradication treatment. Johnson grass, Russian knapweed, hoary cress, yellow star thistle, poverty weed, puncture vine, and white horse nettle received close attention. After treatment, these species are closely approaching eradication in most districts.

In cooperation with representatives of the State Department of Agriculture, the Extension Service, chemical companies, and county and city personnel, many weed control tests were made. Through these test plots a large amount of valuable information was obtained that assisted us in finding better and cheaper methods of weed control.

Material used on Weed Control were:

2,4-D . . . . .	2,108 Gal.
Weed Oil . . . . .	2,705 Gal.
Weed oil and Sinox . . . . .	1,035 Gal.
Polybar Chlorate . . . . .	1,550 Lbs.

Principal Weeds:

Puncture Vine	Chickory
Johnson Grass	Milk Thistle
Hoary Cress	Yellow Star Thistle
Gaura	White Horse Nettle
Russian Knapweed	Morning Glory
Poison Oak	Dog Bane

#### RODENT CONTROL

##### GROUND SQUIRRELS

Staff members, extra hired help and individual farmers surveyed and placed poison baits on all agricultural farm and range land for the control of ground squirrels. Thallium sulfate on oat baits, carbon bisulphide and methyl bromide were used as the general control materials. Strychnine poisoned baits were also used later in the year as a follow up material.

Following the heavy winter rains carbon bisulphide and methyl bromide were used until the young squirrels were large enough to leave their burrows. Then control measures were changed to the use of thallium sulphate on rolled oats over the entire county. Varying results were noted in some areas due to the presence of natural baits normally consumed by the ground squirrel.

In those areas of agricultural land where subdivision and increased building programs make the use of secondary poisons hazardous, Warfarin was used in bait containers to give control. Specially made bait containers for the use of Warfarin made it possible to use this material in those places where other types of baits could not be used. Excellent results were noted.

##### GOPHER CONTROL

This rodent is probably the most serious pest found in the majority of counties in the state. Considerable damage has been noted during past years to orchard crops. Demonstrations were held to point out the best methods and materials to use for the control of pocket gophers. Since the pocket gopher is not included as a plague vector for control by the county, it becomes an individual problem for the grower.

Bait materials and poisoned baits were prepared by the Commissioner's

be for sale at cost to the growers. It was our observation that the number of aphids has increased rather noticeably during the past few years. This pest being rather hard to control, and making the treatment rather costly offers a challenge to the individual grower for the protection of his crop trees.

RAT CONTROL

A rat control program was carried out over the rural area of the county with excellent success. Warfarin treated baits were used exclusively.

BIRD CONTROL

Numerous complaints were received in the office concerning bird damage to various crops, especially seed producing varieties. In those cases where damage was severe some aid was given to the growers by bird control programs. This action was taken under authority of the Federal Government and the State Department of Agriculture.

MISCELLANEOUS ANIMAL CONTROL

Growers were assisted in the control of other animals that caused damage to agricultural crops. Among those listed were rabbits, skunks, wildcats and coyotes.

Following is a summary of the rodent control program:

Acres treated . . . . .	245,429
Strychnine treated grain . . . . .	1,658 Lbs.
Thallium treated grain . . . . .	3,671 Lbs.
1080 treated grain . . . . .	103 Lbs.
Methyl Bromide . . . . .	4,866.3 Lbs.
Warfarin . . . . .	817 Lbs.
Carbon bisulphide . . . . .	5 gal.
Hours spent on Rodent Control . . . . .	8,721

APIARY INSPECTION

The regular inspection and registration of apiaries was carried out this year by staff members of the office.

Following is a summary of the work done:

	<u>No. Apiaries</u>	<u>No. Colonies</u>
Registered . . . . .	107	6,049
Entering California . . . . .	7	-
Leaving California . . . . .	3	894

VENTURA COUNTY  
DEPARTMENT OF AGRICULTURE

Agricultural Building  
Santa Barbara and Eighth Streets  
Santa Paula, California

ANNUAL CROP PRODUCTION AND ACREAGE REPORT

COUNTY OF VENTURA

1952

Pursuant to Sections of 65.5 of the Agricultural Code, we submit the crop production, crop value and acreage report for the year 1952.

This report is in no way an indication of net return to Ventura County growers, but is merely a tabulation of acreage, production and F.O.B. values of the agricultural crops grown in Ventura County.

Values used in the totals include all cultural, labor, producing and harvesting costs, and one should remember that these costs in many cases amount to almost as much as the gross returns and therefore leave very little profit for the growers.

The total value is somewhat higher than in 1951 and shows a trend in crop varieties and acreage changes.

We are indebted to many individuals, firms and marketing agencies for their assistance in compiling this report, and we hereby express our sincere thanks and acknowledgment to them for their cooperation.

  
C. J. BARRETT  
AGRICULTURAL COMMISSIONER

The following is a report of the dairy industry in Ventura County for the year ending December 31st, 1937. This report covers market milk and cream produced under the supervision of this department.

No. of Dairies	33
No. of Producer-Distributors	21
No. of Wholesale Producers	12
No. of Distributors (non-producers)	3
No. of Dairy Cows	3226
Average Daily Production of Milk Gallons	8141
Average Daily consumption in Ventura County	
Guaranteed Raw Milk	200 Gal.
Guaranteed Pasteurized	125 "
Grade A Raw Milk	2051 "
Grade A. Pasturized Milk	<u>1215</u> "
Total	3681 "
Average separated daily for cream	550 gal.
Average daily volume shipped out of County	3910 gal.
Average volume of cream shipped into County	15 gal.
Estimated total sales in Ventura County of milk, cream, ice cream manufactured from milk produced in Ventura County	\$727,750.00
Estimated revenue from milk shipped out of Ventura County	<u>411,900.00</u>
Total	<u>\$1,139,650.00</u>

This represents an increase in revenue of 10% over 1936. Guaranteed raw and pasteurized milk is selling for 14¢ per quart, Grade A raw and pasteurized milk 13¢ per quart. The price of butter fat per pound received by the wholesale producers, averaged 67¢ in the Los Angeles Market.

Two retail dairies discontinued operation in 1936.

The above report on the dairy industry is submitted by Charles R. Wylie, M.D., County Health Officer, by Max A. Heinzman, Chief Inspector.

The 1937 crop report of Ventura County shows the largest return from agriculture to the County that has ever been experienced, exceeding by approximately four million dollars the return of 1936 and the previous largest year, which was 1929, by about the same amount.

As in previous years a large majority of the return came from citrus. This increase is due of course to a somewhat better price than received in 1936 and also a large acreage increase. Although the unit return on citrus was larger in 1937 than in 1936 the producers of the fruit received no more money than in 1936. This is due to the fact that considerable added expense was put upon the growers in the past winter in order to protect their fruit from the serious freeze experienced at that time. Also large sums of money were expended this year on improving housing conditions and working conditions for farm laborers. Many of the organizations in the County declared a ten percent bonus to labor.

Some of the major crops in the County showed a decrease over 1936, as an example, beans show approximately a half million dollars less return than in 1936. This was due to lower price although the production was somewhat higher in 1937 than in 1936.

Walnuts brought considerably less due to lower prices.

Vegetables showed an increase due to a larger production rather than increased price.

It must be borne in mind that in considering this report that these prices are F.O.B. and not return to the grower. This report is put out in this manner as it is felt that inasmuch as this money comes into the County everyone benefits by it as a large percentage of the income is expended for labor within the County, thereby labor benefits.

1938

VENTURA COUNTY CROP REPORT--1938  
 Compiled by  
 A. H. Call, Agricultural Commissioner

The prices shown in the following crop report are FOB prices. In practically all cases producers of the products in this report received much less than the unit return shown. For example, valencia oranges show a packed box return of \$1.82 FOB but after the deduction of packing house expense and growing costs there was practically nothing left for the producer. In fact, the pickers of citrus fruit this year received more money per packed box for their labor than the producer received. Although there was an increased number of shipments of products this year over the previous year there is still a reduction in return to the County of approximately six million dollars.

Total	\$1,049,950.00

Two dairies discontinued operation in 1938.

The above report on the dairy industry is submitted by the Ventura County Health Department, Division of Sanitation, by Max A. Heinzman.

Three vertical black bars of varying widths are positioned on the left side of the page. They are separated by white space and extend from near the top to near the bottom of the page.

1939

VENTURA  
COUNTY  
CROP REPORT  
— 1939 —

AGRICULTURAL CROP REPORT FOR THE YEAR 1939  
Compiled by Frank L. Kellogg, Agricultural Commissioner

This crop report is issued by the County Agricultural Commissioner's office in response to many requests received from growers, shippers, banks, Chambers of Commerce, and governmental agencies for crop information.

In order to show actual total returns to Ventura County from agriculture the values for the various crops are based on F.O.B. prices and do not represent net returns to growers. If cost of production were deducted from the F.O.B. price, the figure would present a different picture.

The production and price figures were obtained from a great many different sources and the Ventura County Agricultural Commissioner's office wishes to thank those who assisted and cooperated in this work.

VENTURA COUNTY  
CROP REPORT

1 9 4 0

February 1, 1911.

Honorable W. B. Parker, Director  
State Department of Agriculture,  
Sacramento, California

Dear Sir:

This crop report has been prepared by the Agricultural Commissioner's office of Ventura County in accordance with the provisions of Section 69.5 of the Agricultural Code of the State of California.

The prices shown for the various crops in this report are F.O.B. prices and are not net to the grower. The F.O.B. prices include the cost of picking, packing, hauling, etc., and so do not represent the actual income of the growers.

The data shown in this report was gathered from a great many sources in the County and the Agricultural Commissioner's office wishes to thank those who assisted and cooperated in this work.

Respectfully submitted,

*Frank J. Kelley*  
AGRICULTURAL COMMISSIONER

FLK:L
